GENERAL CATALOGUE

CN. 19

THE TRADITION
OF INNOVATION SINCE 1945

ILME designs and manufactures complete solutions for industrial connections.
Headquartered in Milan and with subsidiaries in the key countries driving the progress of automation, ILME is an industry leader in the main world markets.
People are vital to success and growth at ILME, sharing a passion for innovation, utmost responsibility and participation.
The Company is committed to developing technology in the areas that most impact the future of the industries it serves: high quality and safe cabling, research on the most suitable materials, rapid turnaround and readily available services while striving for energy saving and environmental safeguard.

COMMITMENT TO INDUSTRY

Technological innovation is the main pillar of ILME competitiveness.
In the electrical connection sector of industrial automation, characterized by the need for top performance and reliability, ILME is an acknowledged leader with its own patents and a global benchmark supplier of major companies worldwide.
ILME offers a fully integrated range of high-quality products and services for every type of connection to suit any application requirements.

Practical advices for consulting the catalogue

Page layout and index

The ILME General Catalogue is divided into **six** sections to make it easier its consultation.
All the products included have been grouped together by product lines.

The **sections** are marked with different colours to facilitate their immediate identification.

Please refer to the example page at right.

1 **Six sections** marked by different colours:

- **INTRODUCTION**
- **INSERTS**
- **MIXO INSERTS**
- **ENCLOSURES**
- **ACCESSORIES AND TOOLS**
- **APPENDIX**

2 **Sub-sections** showing the specific product page

3 **Chapters and technical detail page**

4 **Combinations and pictures**
List of the possible combinations between inserts and enclosures

5 **Product descriptions and part numbers**

6 **Technical descriptions, 2D drawings**

7 **Load curves** (for more information please refer to page 28)

The **figurative index,** that opens each section, clearly shows the series of products relevant to each product line.

Icons

Published in the “Combinations and pictures“ area to to highlight specific points.

IMPORTANT NOTES

Strictly tied to our general conditions of sales

1 ILME designs and manufactures complete solutions for Heavy Duty electrical power connections.
The connector (although offered to the user as a variety of elements, usually inserts and enclosures, to allow the selection of the ideal combination) has been **designed as a complete connector** and tested to be compliant with the essential safety requirements of the EU Low Voltage Directive 2006/95/EC (2014/35/EU from April 20, 2016) and in particular the EN 61984 standard. The design of this "whole" system guarantees that every allowed combination of inserts, enclosures and accessories cannot result as improper.

2 The products in this catalogue alone cannot guarantee the best functionality upon installation, as this depends also on their correct **"putting into service"** which must be performed in compliance with the applicable system safety standards and according to the "rule of the art". Therefore the effectiveness of the installation of the connector depends on the choices of the end user who must also take into account the following safety requirements.

3 Connectors must **not be connected or disconnected when live or under load.**

4 After wiring the inserts it is necessary **to verify the continuity of the protective earth connections.**

5 The **correct coupling of the inserts** is guaranteed only if they are installed (with the four fixing screws supplied *) inside the corresponding enclosures or onto compatible accessories in this catalogue. ILME S.p.A. is not responsible for any different application.

6 Wiring of **screw-type terminal connections** must be carried out applying the correct tightening torque in order to avoid false contacts or damage to the conductor, the screw or the terminal.

7 **Crimping tools** and **crimp contacts** used should preferably be supplied by the same manufacturer to avoid difficulties with the insertion and retention or damaging of the contacts themselves.

8 Correct wiring of **spring-clamp connection inserts** is guaranteed only when the correct screwdriver indicated in the specific catalogue, or possibly on the insert, is used **.

9 Avoid forcing the contacts during **connection and disconnection.** Connectors must be coupled and uncoupled in the axial direction with respect to the contacts, without bending and pulling the attached conductor bundles or cables.

10 Installation of two **inserts side by side,** in enclosures with two bays, must respect the polarity drawing marked on the insert (or the contact side view, as shown in this catalogue) to avoid inverted coupling.

11 Installation of two or more identical **connectors side by side** is recommended only with the use of **coding pins** in order to avoid mismatched couplings.

12 In order to keep the declared **degree of protection** (IP code according to EN 60529, or Enclosure Type Rating according to ANSI/UL 50E), enclosures must be completed with cable glands and/or other accessories with at least an equal degree of protection.

13 Moreover, the declared **degree of protection** (IP code according to EN 60529, or Enclosure Type Rating according to ANSI/UL 50E) is guaranteed when the enclosures, complete with inserts, are coupled and locked with their locking levers (or devices).

14 Connector inserts and their enclosures are generally compatible with similar/equivalent products from other manufacturers, according to the last samples tested. Full compatibility cannot be guaranteed in the event of technical changes made by other manufacturers.
In particular, maximum performance of IP68 enclosures (CG Series) cannot be guaranteed when coupled with other manufacturers' products.

15 **Spare parts** are supplied in minimum quantities only with the purpose to replace damaged parts. To avoid invalidation of warranty, products should be modified or repaired only by ILME: the integrity of their functionality - e.g. their degree of protection - can no longer be guaranteed if products are modified/repaired by end-users. In any case, the liability for correct choice, assembly and use is totally at charge of the installer and the end-user.

16 ILME S.p.A. takes no responsibility in verifying whether the components herein contained comply with any specific regulations of fields of application.

17 ILME cannot be held responsible for individual components in **uses other than those described in this catalogue.**
ILME cannot be held responsible for **incorrect connector selection** in relation to the environmental conditions of the application (e.g.: influence of ambient temperature, moisture, environmental pollution, etc.).

* Except one fixing screw for size "21.21" inserts, two fixing screws for size "32.13" inserts.
** Except for **Squich®** inserts (with spring-clamp terminals with actuator button) that do not require any tool to operate the terminal.

CE MARKING

As from 1st January 1997, in order to make available electrical products on the European market, the manufacturer must ensure that these bear the relevant **CE marking,** in line with the Low Voltage Directive 73/23/ EEC* (implemented in Italy as L. D. 18-10-1977 no. 791) and its modification 93/68/EEC* (implemented in Italy as L.D. 25-11-1996 no. 626/96, published in the supplement to the Gazzetta Ufficiale of 14-12-1996).

The CE marking must be visible on the product or, if this is not possible, on the packaging, the instructions for use or on the warranty certificate. It acts as a declaration by the manufacturer that the product complies with all relevant EU directives regarding its field of application.

ILME products bear the CE marking on the actual product or its packaging.

Almost all ILME products fall within the scope of the Low Voltage Directive. An EU declaration of conformity is required in order to be able to apply the CE marking. This declaration, to which the market is not directly entitled, must be made available to the controlling authorities (in Italy, the Ministry of Economic Development) at all times. In it, the manufacturer declares the technical safety standard(s) followed in the design and manufacture of the product. These standards must be, in decreasing order of preference:

— a European standard (EN prefix)
— a European harmonisation document (HD prefix)
— an international IEC standard
— a national standard
— in the absence of reference standards, the manufacturer's internal specifications guaranteeing compliance with the basic safety requirements of the directive.

Conformity with harmonised technical standards (i.e. ratified by CENELEC) also constitutes presumption of conformity with the basic safety requirements of the directives.

The CE marking of ILME products results from the declaration of conformity of the product to harmonised standards or international IEC standards.

Through the CE marking, ILME declares full compliance, not merely with the directive's basic safety requirements, but also with those international or national standards on which voluntary safety certification markings are based (e.g. IMQ and VDE). In this way, ILME intends to give the CE marking the value of self-certification in terms of safety, given the loss in legal value of voluntary certifications issued by third parties, ratified by directive 93/68/EEC*.

Notwithstanding the above, practically all ILME products still bear voluntary conformity markings.

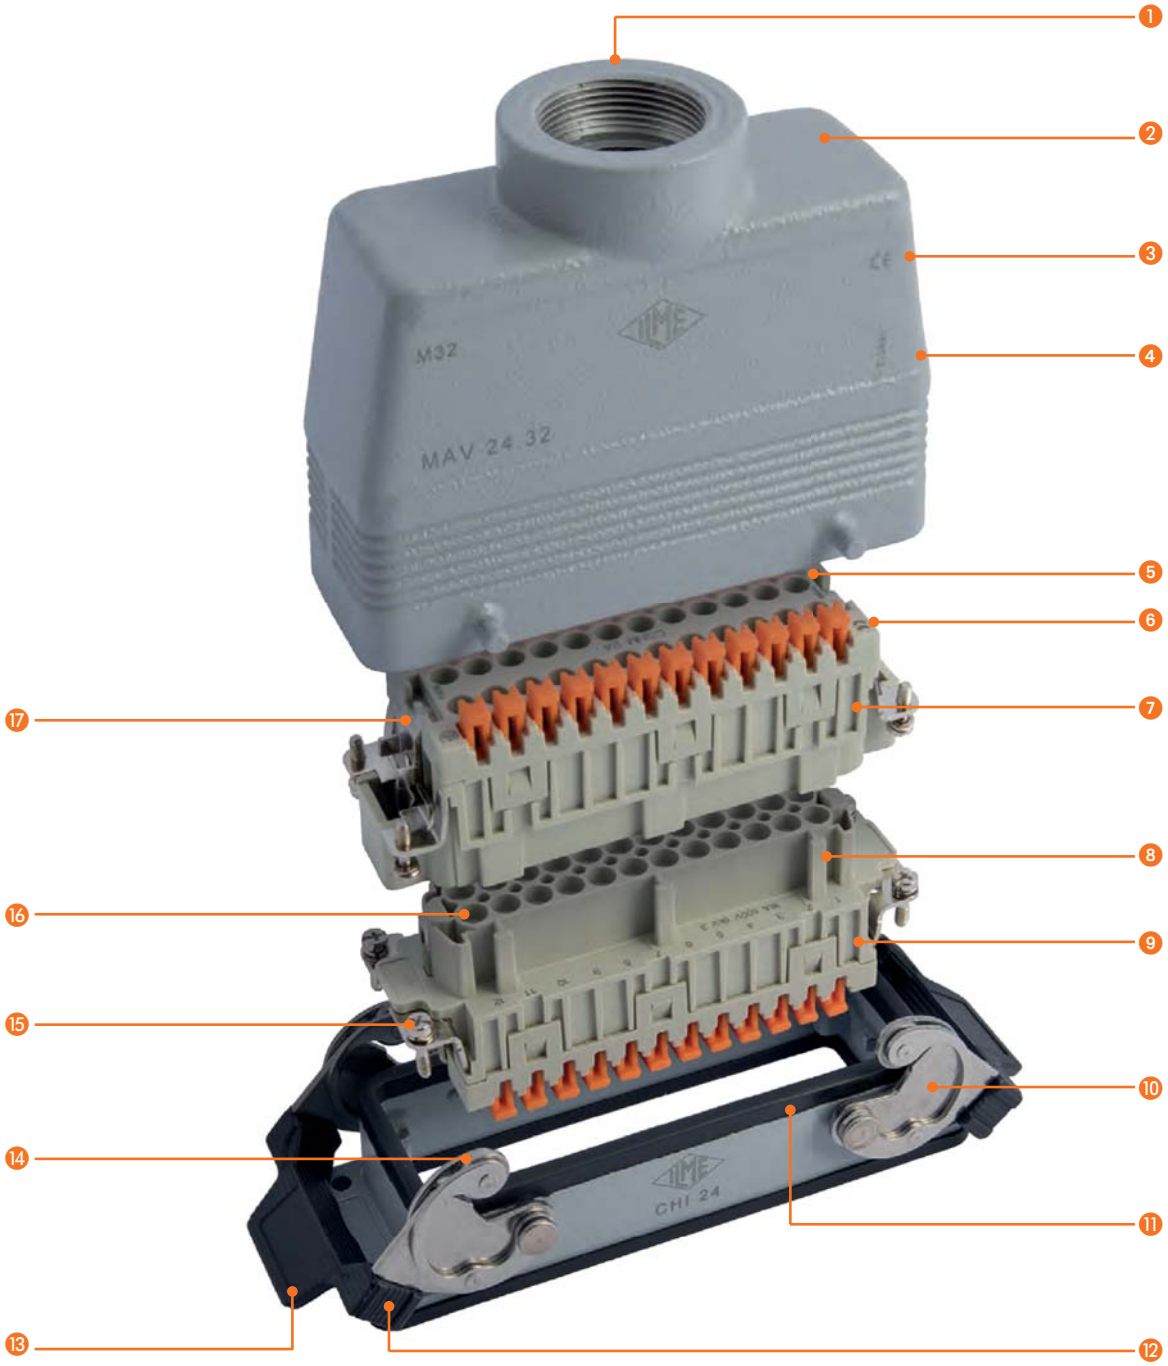

The above mentioned EU declaration of conformity becomes null and void when the assembly of products includes one or more components not manufactured by ILME and without CE marking.

⚠ **The information contained in this catalogue is not binding and may be changed without notice.**

* Note: The next legal reference for the Low Voltage Directive was 2006/95/EC, as consolidation of the original Directive 73/23/EEC + Directive 93/68/EEC. On 29th March 2014, the Official Journal of the European Union published the new Low Voltage directive 2014/35/EU dd. 26th February 2014, a recast version of directive 2006/95/EC, which is in force since 20th April 2016.

UNI EN ISO 9001: 2015
Design, manufacture and distribution
of industrial electrical equipment (IAF 19)
Certificate No. 50 100 11133

GENERAL FEATURES OF MULTIPOLE CONNECTORS

1. **Threaded cable entry** in various Pg diameters (types with pre-code “C”) or metric cable entry (types with pre-code “M”) in accordance with EN 60423, for cable entry devices in accordance with EN 62444 (NPT threading on request), may be located vertically, horizontally or frontally.
2. Rugged die-cast **aluminium alloy** or **zinc alloy** (most of CKA, MKA) or **self-extinguishing thermoplastic** enclosures (types CK, MK, CQ 08 and T-TYPE), c UL us approved.
   Surface-mounting, bulkhead, and hood versions available, with or without hinged cover, or with free protection covers. Enclosure types CH-CA (w/ Pg cable entries) and MH-MA (w/ metric cable entries) have an internal tab that prevents the insertion of higher voltage inserts series CME (all) and CMCE (only 16+2 poles), while CM (Pg) enclosures series and MM (metric) dedicated to those 830 V inserts have no tab and contain supplementary insulating strips inside.
3. **CE marking** attesting conformity to the requirements of the Low Voltage directive (2014/35/EU).
4. Metallic enclosures with a coated **finish** of thermosetting epoxy-polyester (epoxy for W-Type, IP68 CG/MG and E-Xtreme®) with high resistance to mechanical stress and external agents. Enclosures for use at temperatures up to 180 °C are treated with special coatings.
   Where improved electromagnetic shielding is necessary, EMC enclosures treated by highly conductive and corrosion resistant RoHS 2 conform surface treatment.
5. **Contact position** identified with numbers or codes on both sides of each insert and printed with a laser system or by mould.
6. **CE marking** attesting conformity to the requirements of the Low Voltage directive (2014/35/EU).
7. **Inserts** are made of UL certified self-extinguishing fibreglass reinforced thermoplastics, and feature an operating temperature range between -40 °C and +125 °C. The inserts CME (all) and CMCE (only 16+2 poles) for 830V have a key that prevents the insertion of inserts for use other than that prescribed (types CM - Pg and MM - metric). For some series, inserts in PPS (polyphenylene sulphide) may be requested for special uses with temperatures of up to 180 °C.
8. Insert **polarised profiles** with asymmetrical guides to avoid incorrect matings. Inserts have a mechanical life equal to or higher than 500 mating cycles.
9. Inserts and enclosures are manufactured in compliance with European standard **EN 61984** (DIN VDE 0627), certified and identified with **UL** (c UL us or UL) and **CSA** marks.
10. Stainless steel **locking levers and springs** guarantee a perfect closure and a tight sealing.
11. Special **sealing gaskets** in vinyl nitrile elastomer, polyurethane or fluoroelastomer (on R-Type enclosures for use with maximum temperatures of 180 °C, on W-Type enclosures for aggressive environments and on E-Xtreme® enclosures for ultimate resistance to corrosion and erosion), anti-aging, oil-resistant, fuel-resistant, together with the cable entry devices (not supplied) provide a degree of protection (IP code per EN IEC 60529 and Enclosure Type Rating per ANSI/UL 50E) for coupled connectors. Special conductive sealing gaskets for S-Type EMC enclosures.
12. **Locking device** available in two versions, simple (with one locking lever), or double (with two locking levers). In metallic enclosures, ILME offers different types of locking levers: vertical (V-Type) or classic (C-Type) rotational closure.
13. Various **handle** solutions are available:
    in self-extinguishing thermoplastic material; in die-cast aluminium, or by stainless steel (either integral or built-in with the lever).
14. **Pins and locking levers** (C-Type as shown in picture) supplied with anti-friction rolls that facilitate closure and limit wear and tear.
15. Captive **insert fastening screws,** with anti-slackening spring washer or under-head knurling.
16. **Silver or gold plated brass contacts** connected to the wires by means of captive screws supplied already slackened (screw-type connectors), with spring-clamp terminal (spring connectors), spring-clamp terminals already open with actuator button (Squich®, as shown in picture), by means of crimping (contacts available separately), or with a built-in 45° terminal block (in turn with screw-type or spring-clamp terminals).
17. Protective **earth terminal** with a wide contact surface.

Find more information on our products at www.ilme.com

STANDARD INSERTS

Inserts are made of UL 94V-0 self-extinguishing thermoplastic resin, normally for use with a maximum ambient temperature of 125 °C; special versions made of >PPS< for use with a maximum ambient temperature of 180 °C.
Screw, crimp or spring connections are available. Contacts are in silver or gold plated brass. Inserts are numbered on both sides by laser marking or moulded.

The large number of inserts versions is selected on the basis of rated voltage (50V - 5000V), rated current (5A - 200A max), number of poles and different load combinations required (power and signal poles within the same insert). Inserts are approved in accordance with the applicable safety standards by several third party agencies like UL, CSA, DNV-GL, Bureau Veritas, CQC and EAC. For certifications refer to the summary statement in this catalogue.

MIXO MODULAR UNITS

The MIXO series is a system composed of modular connector inserts and ancillary parts, able to create a wide diversity of tailored connector solutions, and to satisfy the most specific application needs using the traditional rectangular heavy-duty connector enclosures.

Inside a single enclosure it is possible to house various connections of different nature, for example lines for electrical signals (analogue or high-speed digital), electric power lines, quick coupling contacts for conducting compressed air with pressures of up to 8 bar, fibre optic contacts, Ethernet, USB and coaxial networks.

Insert compartments are composed by placing multiple MIXO modules side by side by locking them each other through specific dovetail shaped keys and keyways, to form a single compact block, much easier to handle and fix to the frame than individual “floating” modules; this block is then inserted in a suitably sized MIXO metal frame with predetermined locking slots. Once the single block of modules has been inserted in the frame and locked with the two special locking keys accompanying each MIXO frame, the connector composed in this manner can be inserted and fixed into the chosen enclosure.

▲ Available upon request.

● CME series requires the CM-MM enclosures with additional insulation (available upon request) or T-TYPE insulated enclosures.

All inserts with built-in contacts are provided with silver plated contacts, unless otherwise specified.

[1] Polarities shown in brackets may be achieved by using two inserts.
[2] Please check the insert load curves to establish the actual maximum operating current according to the ambient temperature.
[3] The certifications shown in brackets are being applied for.
[4] It may be used with ambient temperatures up to 180 °C by using the insert special version made of PPS (polyphenylene sulfide).
◈ CD 07: IP67 with thermoplastic enclosures (cannot be used with metal enclosures).
◐ Contacts partially fitted inside an insert allow inserts to be used for applications requiring rated voltages higher than those shown. See CD, CDD, CQE inserts relevant tables.

◈ With cable ∅ up to 5 mm (CX 03 4), with cable ∅ up to 7,5 mm (CX 03 4B).
◐ Multi-axial shielded connectors CX 04 B (4P, 10A) or CX 08 B (8P, 5A) or coaxial connectors CX 01 B (10A) or CX 01 BC (16A).
◧ Centre contact resistance ≤ 10 mΩ; outer contact resistance ≤ 3 mΩ.
⦿ Suitable for CI crimp contacts up to size 0.5.
All inserts with built-in contacts are provided with silver plated contacts, unless otherwise specified.

RECOMMENDED TIGHTENING TORQUE

- insert terminal screws, including PE terminal and fixing screws
- axial screw insert, MIXO series CX 02 4A / CX 02 4B
- enclosures assembly screws

Insert terminal screws, including PE terminal and fixing screws

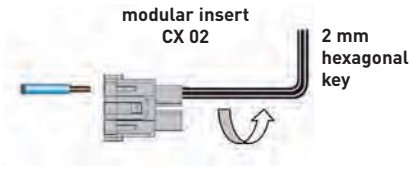

Increasing the tightening torque of terminal screws does not considerably improve the contact resistance. The screw torques are selected according to standard EN 60999-1, to provide excellent mechanical, thermal and electric behaviour. The conductor or terminal may be damaged if the recommended values are significantly exceeded.

Screw size	Connector type	Recommended tightening torque		Recommended size of screwdriver
		(Nm)	(lb.in)	
	LINE TERMINALS

Axial screw insert, MIXO series CX 02 4A / CX 02 4B

The connections of the conductors to the female and male inserts are made via axial screw. Fully insert the stripped wire in the back of the contact (axial screw terminals are supplied fully opened); while holding the wire down, insert a 2 mm hexagonal key in the front of the contact and tighten to recommended torque. After assembling the complete connector periodically check that the contact is screwed tight by re-applying the proper tightening torque.

— Usable conductor cross-sections (EN 60228 Class 5):
  from 2,5 to 8 mm^2 (14 AWG to 10 AWG) (CX 02 4AF/M)
  from 6 to 10 mm^2 (10 AWG to 8 AWG) (CX 02 4BF/M)
  (extra-flexible EN 60228 class 6: 2.5... 6 mm^2 (14 AWG to 10 AWG)
— Use only stranded flexible copper conductors
— Do not twist the strands!
— Tightening torque with 2 mm hexagonal Allen key:
  1,5 Nm (13,3 lb.in) max for conductors with section 2,5 ... 4 mm^2 (14 AWG to 12 AWG)
  2 Nm (17,7 lb.in) max for conductors with section 6 ... 10 mm^2 (10 AWG to 8 AWG)
— Stripping length: 8^{+1} mm

Enclosures assembly screws

In the table below, the recommended minimum and maximum tightening torque to apply to the fixing screws of ILME bulkhead mounting housings are shown, assuming the use of steel screws (bolts) with 8.8 resistance class and a good fixing panel surface according to the requirements mentioned therein.

Series	Number of screws	Screw size	Recommended torque		Flange sealing element
			(Nm)	(lb.in)	
CK/MK, CKX, CKA/MKA, CQ	2	M3	0,8 – 1,0	7,1 – 8,9	Gasket
MIXO ONE	4	M3	TBA	TBA	Gasket
CZI 15 /25	4	M3	0,8 – 1,0	7,1 – 8,9	Gasket
CHI 50	4	M4	1,2 – 1,8	10,6 – 15,9	Gasket
CHI 06 /10 /16 /24	4	M4	0,8 – 1,2	7,1 – 8,9	Gasket
CHI 32	4	M4	1,2 – 1,8	10,6 – 15,9	Gasket
CHI 48	4	M6	3,0 – 3,6	26,6 – 31,9	Gasket
CGK/MGK (IP68)	2	M4	0,8 – 1,2	7,1 – 8,9	O-ring
CGI/ MGI 06/ 10/ 16/ 24 (IP68)	2	M6	3,0 – 3,6	26,6 – 31,9	O-ring
T-Type, T-Type/H, T-Type/C, T-Type/W	4	M4	0,8 – 1,2	7,1 – 8,9	Gasket

To guarantee the declared IP degree of protection of the housings reported in this catalogue, according to EN IEC 60529 or to the relevant Type rating per ANSI/UL 50 and 50E (for those products bearing approval to those ratings), the surface of the mounting panel must meet the following requirements (definitions are provided in ISO 4287 standard):

– Waviness Wt ≤ 0,2 mm over a distance of 200 mm (measured on the panel without load)

– Roughness Ra ≤ 16 µm

NOTE: The values of tightening torque indicated in the above table are just recommended values, that must be related – by the designer of the final application – to the resistance class of the screws (not included in the delivery), with the assumption that the mounting panel is sufficiently rigid (stiff). If the deflection of the panel, under the effect of tightening the screws, is greater than 0,7 mm over a distance of 100 mm, it is necessary to use the counter-flanges mentioned in our catalogue or the special flange gaskets available upon request (please contact our Sales Department). For the CGI/MGI IP68 enclosures the specific counter-flanges mentioned in our catalogue are always recommended.

RANGE OF CONDUCTOR CROSS-SECTIONAL AREA AND STRIPPING LENGTH

Connector inserts connection technique	Range of conductor cross-sectional area		Stripping length
Screw	(mm^2)	AWG	(mm)

CTS 40/64	0,14 – 2,5 unprepared 0,14 – 1 prepared	26 – 14 unprepared 26 – 18 prepared	9 - 11
CKS, CKSH, CDS, CDSH, CSAH	0,14 – 2,5 unprepared 0,14 – 1,5 prepared	26 – 14 unprepared 26 – 16 prepared	9 - 11

[1] For CNE, CDA, CP, CME, "CX 4/8 – pole 16A" series connectors with screw terminal and conductor protection plate, the use of ferrules is not necessary (= unprepared conductor). The use of ferrules (= prepared conductor) causes a reduction in maximum useful cross-section to the lower size (e.g. 4 mm^2 unprepared - 2,5 mm^2 prepared).

[2] Available upon request.

CONDUCTOR CONNECTION TECHNOLOGY

SCREW

For all inserts with screw terminals it is important that the right torsional torque is applied to the screws in order to prevent wrong contacts or damage to the conductor, the screw or the terminal.

The **10A and 16A crimp contacts** are available either silver or gold-plated.

The **gold-plated crimp contacts** are recommended for applications with very low rated currents and rated voltages. Thanks to the conduction characteristics of gold, the deterioration of signals is prevented and an excellent resistance to the surface oxidation of the contacts is obtained. In particular, gold-plated contacts are recommended with signals with ≤ 5 mA current and ≤ 5V voltage.

With screw terminal connections with or without wire protection

CK - CDA - CNE - CME - CP - CX

The connections of the conductors to the female and male inserts are made via screws (in accordance with standard EN 60999-1).

Two different types of clamping are possible:
- with pressure plate for unprepared conductors;
- without wire protection that requires the conductors to be prepared with bush terminals.

Clamping types

with wire protection

without wire protection

CX..A / CX..B

The connections of the conductors to the female and male inserts is made via screws in accordance with standard.

Fully insert the wire in the back of the contact; insert a 2 mm hexagonal key in the front of the contact and tighten by holding down the cable (page 20).

Screw connected in built-in terminal block

CT

In this layout the wires are connected to the socket and plug insert contacts by means of a screw for all CT inserts (in compliance with EN 60999-1).

The inserts contain:
- a terminal block at 45° for fixed installation on electrical panels or on built-in DIN EN 60715 rail, for easier wire cabling and identification operations
- screw connection with pressure plate which does not require the wires to be prepared (CT inserts).

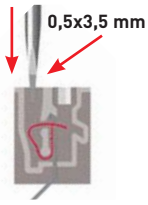

CT connection technology

INCORPORATED TERMINAL BLOCK

Connection technology

step 1
Insert the flat blade screwdriver tip in the dedicated square-shaped cavity provided outside the terminal and push it down perpendicularly to the access surface, up to the bottom. Acting as a wedge, the screwdriver tip pushes forward the spring, to open the wire clamping window.

step 2
Insert the wire previously stripped at the right length all the way down in the round terminal cavity.

step 3
Remove the screwdriver tip. The spring clamps now the wire in the terminal.

step 4
Pull gently on the wire to ensure that it is firmly clamped in the spring terminal.

Built-in terminal block

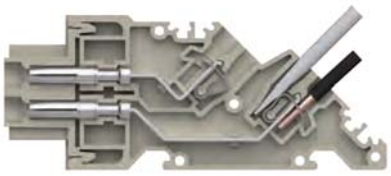

CTSE - CTS

With terminal block at 45° built-in for fixed installation on electrical panels or on built-in DIN EN 60715 rail, for easier wire cabling and identification operations.

Spring terminal connection which does not require wire preparation (CTSE inserts).

CTSE connection technology

Dual spring terminal

CSS

Equipped with two terminals per contact.

This type of connection allows a circuit to be branched off.

CSS connection technology

0,5 x 3,5 mm blade

SQUICH® - SPRING

Connection without tools

The wires are connected to the insert contacts by a spring terminal with patented actuator button.

Key advantages:

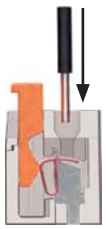

- No special wire preparation, other than stripping
- No need for wiring tools
- Excellent fastening solution and great resistance to strong vibrations
- Suitable for solid and flexible wires, both ferruled and unferruled, with a cross sectional area range of 0,14 mm^2 to 2,5 mm^2
- Reduced wiring time, up to 50%
- Correct wiring can be checked by inserting a test probe into the perforated shape of the actuator buttons

SQUICH® - spring

Connection technology

WIRING

1

Deeply insert a stripped conductor into a round seat.

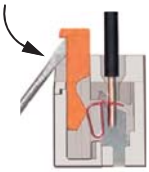

2

Push the actuator button to close the terminal.

RE-OPENING

3

Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

Spring connected contacts with actuator button

SQUICH®

CKSH

All the advantages of SQUICH® connection technology in size “21.21”. Vertical and straight termination and dedicated coding pins.

Watch our SQUICH® video

Spring connected contacts with actuator button

SQUICH®

CSH

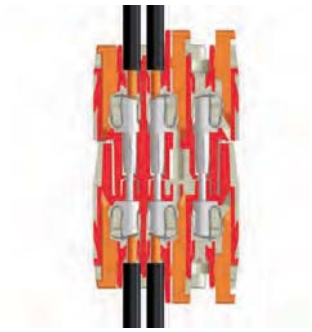

Parent insert of the connection technology. Quick, simple and safe wiring for a practically error-free installation.

CMSH

Specific version for voltages up to 830 V.
The CMSH inserts can be used with all types of enclosures.

Spring connected contacts with actuator button

SQUICH®

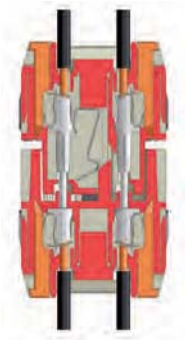

CDSH

High density without tools.
The CDSH insert is the answer to the continuous demand for greater number of poles and smaller dimensions. It offers a maximum number of 84 poles in the same space of standard series. Inserts can be coded by CR CDS pin to avoid incorrect coupling.

Spring clamp contacts with actuator button, with NC shorting contacts

SQUICH®

CDSH NC

The AutoShort connector, suitable for interfacing measuring current transformers. 3 pairs of contacts with AutoShort NC (normally closed) element to protect the measuring current transformer's secondary windings. It can be used either with metal or thermoplastics enclosures, size "44.27".

Spring connected contacts with actuator button

SQUICH®

CSAH

This version implements the SQUICH® concept in a miniaturized version with a high contact density. Slim design for 400V needs.
Inserts can be mated with CDA/CDC series.

CRIMP

Removable crimp contacts (with retention device)

MIXO 70A - 100A - 200A

This layout enables the wires to be connected to the insert removable contacts by crimping them with a crimp tool and its locating turret. Connection is ensured and is **extremely resistant** even to the most insidious strains, such as vibrations.

MIXO 70A/100A max contacts

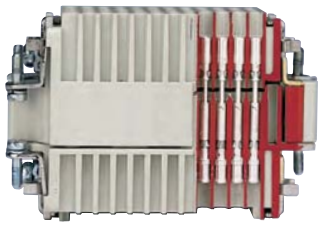

Conductor section		Identification
(mm^2)	AWG	hole Ø (mm)
8 - 10	8 - 7	4,3
16	6 - 5	5,5
25	4 - 3	7,0
35	2	7,9 / 8,2

MIXO 200A max contacts

Conductor section		Identification
(mm^2)	AWG	
16	6	
25	4	
35	2	
50	1	
70	2/0	

Contacts supplied in silver plated version only

Removable crimp contacts (with retention device on contacts)

MIXO CD - CDD - CX

This layout enables the wires to be connected to the insert removable contacts by crimping them with a crimp tool and its locating turret.

The crimped connections are then inserted (with a fitting tool for sizes 1 and 2, without any tools for sizes ②, 3, 4 and 5) in the above mentioned sizes and are kept firmly in place by means of the flexible device fitted on the contacts.
The wire housing entry on the contact is tapered to facilitate wire insertion and to avoid any damages occurring after the crimping operation. To remove connections, a special **extractor tool** must be used.

4A/5A/6,5A max contacts

Conductor section		Identification
(mm^2)	AWG	hole Ø (mm)
0,08 - 0,21	28 - 24	0,64 mm
0,13 - 0,33	26 - 22	0,90 mm
0,33 - 0,52	22 - 20	1,12 mm
0,52 - 0,75	20 - 18	1,12 mm

10A max contacts

Conductor section		Number Identification
(mm^2)	AWG	
0.14 - 0.37	26 - 22	
0.5	20	
0.75	18	
1	18	
1.5	16	
2.5	14	

Contacts supplied in both silver/gold plated versions

Removable crimp contacts (with retention device inside insert)

MIXO CQ - CQE - CCE - CDC - CMCE - CX

The connections of the conductors to the removable contacts of the male and female inserts are made via crimping with a crimping tool and locator. The crimped connections are then introduced in the inserts of the above mentioned series and are **firmly held in place** by means of a retainer device fitted on the insert which holds down the contact. The contact can be removed by simply using a flat head 3 mm screwdriver through the openings provided in the inserts (CMCE 16+2, CX 8/24 series) or by means of special extractor tools, to unlock the retainer device and release the contact (CQ, CCE, CMCE, CQE, CX, CDC, MIXO series).
The wire housing entry on the contact is tapered to facilitate wire insertion and to avoid any damages occurring after the crimping operation.

16A max contacts

Conductor section		Throat Identification
(mm^2)	AWG	
0.14 - 0.37	26 - 22	
0.5	20	
0.75	18	
1	18	
1.5	16	
2.5	14	
3	12	
4	12	

Contacts supplied in both silver /gold plated versions. Male contacts can also be supplied in the "advanced" version and iron/constantan contacts for thermocouples J type.

40A max contacts

Conductor section		Identification
(mm^2)	AWG	hole Ø (mm)
1,5	16	1,75
2,5	14	2,25
4	12	2,85
6	10	3,5

MIXO above contacts are supplied in the silver plated version only

CRIMP CONTACTS OVERVIEW

The 4/6,5A, 10A and 16A crimp contacts are available either **silver or gold-plated.** The gold-plated crimp contacts are recommended for applications with very low rated currents and rated voltages.
Thanks to the conduction characteristics of gold, the deterioration of signals is prevented and an excellent resistance to the surface oxidation of the contacts is achieved. In particular, gold-plated contacts are recommended with signals with less then ±5 mA current and ±5V voltage.

Standard ILME **gold treatment** is carried out in accordance with MIL-G-45204C Class 00, Type II, Grade C and ASTM B428-01 Class 0.5, Type II, Grade C.
The new basic or high thickness gold-plated contacts are in compliance with EN 61984: 2009, IEC 60512 and EN 60352-2:1994 (such as the standard version)

CRIMP SILVER PLATED

4-6,5A

according to DIN 41626-2

LOAD CURVES

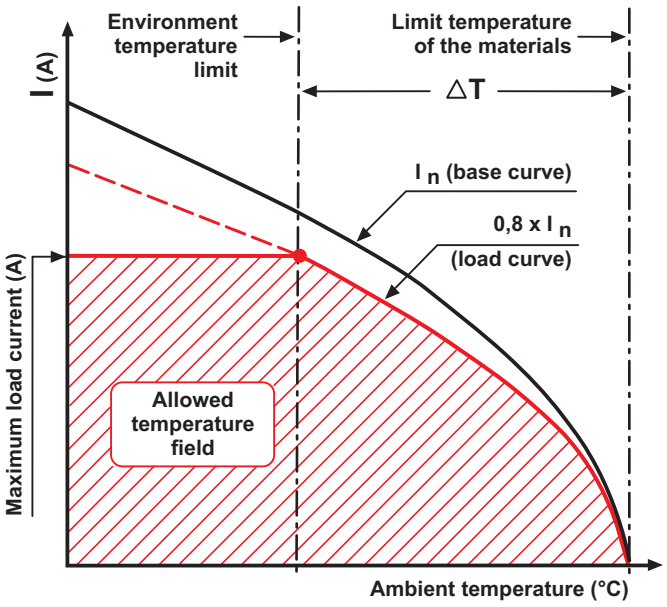

The permitted current carrying capacity for connectors is variable: it becomes lower with the increase of the number of poles and of the ambient temperature in which the connector is installed and it depends upon the thermal properties of the material used for the contacts and the insulating parts including those of the type of conductor used. The current carrying capacity is obtained from the load curves which are constructed according to standard IEC 60512-5-2 for currents circulating simultaneously in all poles.

The limit current curves express current values that determine the achievement of the upper limit temperature of the materials. The choice of the permanent load applicable on the contacts **must be made within the field of operation possible delimited by the above mentioned curves.**

Since use of connectors at the limit values of their characteristics is not recommended, the **base curve** is de-rated. The reduction of the load currents to 80% defines the correction curve where both the maximum permissible contact resistances and the inaccuracy of the temperature measurements are sufficiently taken into consideration.

The correction curve represents the final **limit current curve (load curve)** as defined by standard IEC 60512-5-2. It therefore bears in consideration the differences between the various connector inserts, as well as errors in the temperature measurements.

All the load curves presented in this catalogue include the correction. See figure below.

Legend

Maximum load current (A)
Value for which the connector reaches the upper limit temperature of the material at the corresponding ambient temperature intersected on the load curve.

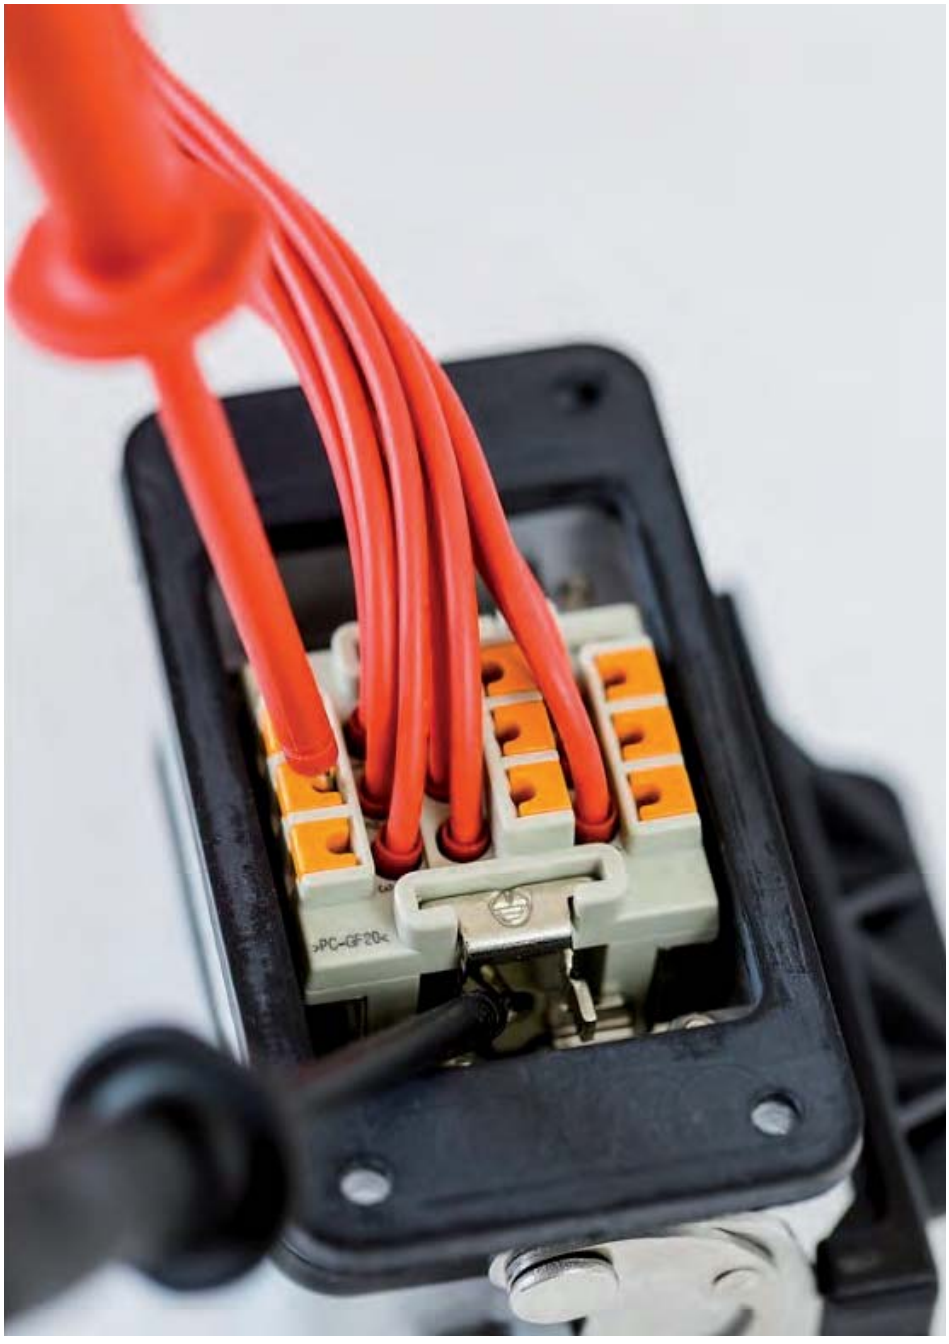

Limit temperature of the materials
Value determined by the characteristics of the material used. The sum of the environmental temperature and the increase of the ΔT (temperature rise) caused by the current flow must not exceed the limit temperature of the materials.

Environment temperature limit
The environmental conditions must not exceed this value. It may be known and determines the maximum load current, or it may be directly obtained from the load curve.

Base curve
Set of current and temperature values obtained from laboratory tests and influenced by the connector's characteristics (number of poles, construction shape, thermal conductivity of the materials, etc.) and the cross-section of the conductor used.

Load curve (limit current curve)
Obtained from the base curve via the safety coefficient.

ΔT (temperature rise)
Temperature rise produced by a permanent current circulating through all the poles of a connector coupling; difference between the upper limit temperature of the material and the ambient temperature obtained on the limit current curve.

>PC-GF20<

TYPE OF ENCLOSURES

A large number of enclosure versions is available with different combinations of component materials, each one suitable for specific environmental installation conditions: standard, high temperature, aggressive, extremely aggressive, and electromagnetic compatibility. The principal parts are made in die cast aluminium (or zinc) alloy with a thermosetting powder coating or in self-extinguishing insulating thermoplastic material. They are resistant to impacts and strong mechanical stress.

The coupling's stability and protection against accidental openings are ensured by single or double locking devices comprising levers, springs and pegs – or screws or bayonets – in stainless steel, or entirely in plastic, or in a combination of both. Sealing is ensured by special gaskets that protect the connectors inside the enclosures against dust and aggressive agents. In general, the coupled enclosures with the appropriate user-selected connections guarantee IP44, IP65, IP66 and IP69 (IEC/EN 60529) degrees of protection and some series can reach IP67 and IP68 degree of protection. This catalogue provides for each enclosure the degree of protection and the conditions upon which it applies. The IP degree of protection of the complete connector coupling is the lowest of those assigned to each of the composing parts and is valid only when any cable entry is fitted with suitably rated cable entry device (not included) and upon connectors mated and locked.

TYPE OF HOODS / HOUSINGS

C-TYPE

This series has been developed for application in electrical and electronic machinery, control units, electrical panels, control equipment, in industrial environments and in general, wherever a reliable and easily disconnectable connection is required for power and signal circuits.

Functional characteristics

- Wear of pins greatly reduced by the presence of rolls, that provide a smooth closure;
- resilience of double spring mechanism for automatic compensation of any coupling tolerance;
- the inserts of the CMCE series (except the 16+2 poles) and of the CMSH series may use standard enclosures also for uses of up to 830V.

✔ UL certified for USA and Canada for Type 4, 4X (outdoor use) and 12 (indoor use) degrees of protection (enclosure type rating), marked on the packaging.
IP65 or IP66/IP69 degrees of protection according to model.

Characteristics of materials for CH, CA and MH, MA, MF series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device with levers, springs, rolls and pins in stainless steel;
- lever handles in self-extinguishing thermoplastic material reinforced with glass fibres, UL approved (for CH, CA and MH, MA enclosures);
- ambient temperature range: -40 °C / +125 °C.

V-TYPE IP67

This original design locking lever, due to the vertical closing movement, offers an IP66/IP67/IP69 degree of protection according to EN 60529 when fitted with a complete and coupled connector using ILME standard aluminium hoods (without adaptor) with die cast pegs.

Functional characteristics

- The friction on the pin is virtually zero as the locking lever exerts its pressure vertically, thus significantly reducing wear in case of frequent use;
- this locking lever can be used for applications with vibrations because it has no springs, hence resulting more rigid;
- this locking lever occupies a very small space during the closing phase;
- it is recommended in cases in which the weight of the cable tends to open elastic locking levers, like with vertically installed connectors and downwards cable exit;
- the absence of plastic parts provides better resistance in case of shocks and exposure to chemical contamination or risk of fire.

✔ UL certified for USA and Canada for Type 4, 4X (outdoor use) and 12 (indoor use) degrees of protection (enclosure type ratings), marked on the packaging.
IP66/IP67/IP69 degree of protection.

Characteristics of materials for C7, C7A and M7, M7A series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device fully in stainless steel;
- ambient temperature range: -40 °C / +125 °C

T-TYPE AND T-TYPE/W

Alongside the wide range of traditional metallic enclosures for multipole connectors, ILME was a pioneer in offering a new series of enclosures in self- extinguishing thermoplastic material in the most common sizes of "44.27", "57.27", "77.27" and "104.27".

Functional characteristics

- Pre-fastened gaskets for easier installation;
- external dimensions of the bulkhead housing are similar to those of the corresponding metal enclosures and hole fixing centres are unchanged;
- ample space inside enclosures for cables, with mounted connectors, similar to the corresponding metal high construction versions;
- possibility of making completely insulated constructions (equivalent to Class II);
- absence of powder paint for environments in which these are not recommended;
- manufactured from insulating material, do not require special reinforced insulation as the metal versions do, for use with series CME 830V higher voltage connector inserts (screw-type terminals).

✔ UL Type 12 degree of protection (enclosure type rating) according to ANSI/UL 50E.
IP65 (T-Type standard),
IP66/IP69 (T-Type/W) degree of protection.

Characteristics of materials for T-TYPE and T-TYPE/W series

- Enclosures in thermoplastic material, dark grey RAL 7012 colour, with high thicknesses providing structural solidity and durability;
- T-TYPE series: built-in polyurethane gaskets;
- T-TYPE/W series: built-in FKM fluoroelastomer sealing gaskets;
- locking levers in thermoplastic material colour grey RAL 7001;
- M25, M32 and M40 threaded cable entries;
- each enclosure carries its own part number, thread/ size, conformity markings and UL type rating;
- ambient temperature range: -40 °C / +90 °C.

T-TYPE/W series have been developed for industrial applications with particularly aggressive external agents (e.g. salt atmospheres or environments).

As the characterizing element of the T-TYPE/W series is the different sealing gasket material, hoods and covers without sealing gaskets for these series are the same of T-TYPE Standard.

COB

The COB system makes it possible to use multipole connectors within electrical panels without the traditional metallic enclosure, as environmental protection is assured by the electrical panel itself or other container.

Q Connectors must not be operated live.

Functional characteristics

- The system may be assembled on panels with window snap fastening device; on DIN EN 60715 rails, both lengthways and crossways to the support; on fixed panels using screws;
- reduction in cost and space with respect to metallic enclosures and traditional terminal boards;
- possibility of rewiring at the connector bench with connected devices;
- easy wiring inspection and tests with coupled connectors, thanks to rear access to the inserts via the turnover device;
- fast mounting in panels thanks to the snap fastening device on the DIN EN 60715 rails;
- sturdy support structure, specific to the size of each insert and does not require any preparation;
- broad passage for housing of conductor cables;
- mobile parts prearranged for the clamping of bundles of conductors of multipolar cables to prevent contact with the connector contacts

✔✔ IP20 degree of protection.

Characteristics of materials for COB system supports

- Self-extinguishing thermoplastic insulating materials, UL certified (COB supports, locking levers, hoods), compatible with the -40 °C / +125 °C operating temperature range of connector inserts;

IL-BRID

Through its original design, the IL-BRID locking lever combines the smoothness of the thermoplastic material with the sturdiness of the stainless steel spring; it has also a linear design which favours a quick wash without retaining external elements.

Functional characteristics

- Soft closing: in the first phase, the thermoplastic locking lever component comes into play: sliding the new locking lever on the pin reduces friction and wear. It is suitable in all applications with frequent opening and closing.
- Strong hold: after the first closing phase involving the plastic component, the stainless steel hook intervenes to guarantee higher resistance to mechanical stress.

✔✔ IP66/IP69 degree of protection.
✔✔ IP65 degree of protection versions with hinged cover.

Characteristics of materials for CZ and MZ series

- Made of die cast aluminium alloy;
- with epoxy-polyester powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device with levers and springs in stainless steel;
- lever handles in self-extinguishing thermoplastic material reinforced with glass fibres, UL approved (for CZ and MZ enclosures)

C7/CZ7 IP67

Enclosures with rigid stainless steel lever to assure an IP66/IP67/IP69 dust and watertight seal.

Functional characteristics

- C7 series: V-TYPE stainless steel locking lever, vertical closing
- sizes 44.27, 57.27, 77.27, 104.27
- with and without hinged cover (except size 57.27)
- bulkhead or surface mounting
- recommended in case of vibrations or heavy weight of cables

- CZ7 series: stainless steel locking lever, rigid
- sizes 49.16, 66.16
- with and without hinged cover
- bulkhead or surface mounting
- recommended in case of vibrations or heavy weight of cables.

✔✔ IP66/IP69, IP66/IP67/IP69 degrees of protection according to model.

Characteristics of materials for C7, CZ7 series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device integrally in stainless steel;
- ambient temperature range: -40 °C / +125 °C.

IP68

For applications in the railway sector and whenever the following characteristics are demanded: high pressure, impact and corrosion resistance, with degree of protection IP68. They also guarantee a good shielding for electromagnetic compatibility.

Functional characteristics

- The IP66/IP68/IP69 degree of protection is ensured if the enclosures are correctly installed and the cable entry devices have equal or higher rating.

✔ UL certified for USA and Canada for Type 4, 4X (outdoor use) and Type 12 (indoor use) ratings, marked on the packaging.
IP69 degree of protection for tightness to pressurized water jets.

Characteristics of materials for CG and MG series

- Made of die cast aluminium alloy;
- with thermosetting epoxy powder coating;
- locking device with either screws or bayonets (types with suffix B).

180 °C

Series specifically developed for industrial applications where the ambient temperatures are particularly harsh (from -40 °C to +180 °C).

Functional characteristics

- For use with inserts in self-extinguishing thermoplastic material suitable for high temperatures (>PPS< polyphenylene sulphide);
- this version is distinguished by the red colour of the enclosures.

✔ UL certified for USA and Canada for Type 4, 4X (outdoor use) and Type 12 (indoor use) ratings, marked on the packaging.
IP65/IP69 degree of protection.

Characteristics of materials for CK..R, CZ..R, CH..R, CA..R and MK..R, MZ..R, MH..R, MA..R series

- Made of die cast aluminium alloy;
- chromate treated die cast;
- coated with special thermosetting powder with high resistant to high temperatures;
- gaskets in anti-aging FKM fluoroelastomer;
- locking device with levers, springs and pins in stainless steel;
- single-block locking levers in stainless steel (for CZ..R, CH..R 48 and MZ..R, MH..R 48 versions);
- lever handles in die-cast aluminium with same special coating of enclosures (for CH..R 10, 16, 24 and MH..R 10, 16, 24 versions);
- supplementary insulation inside enclosures.

E-Xtreme®

ILME patented titanium plasma protection. Corrosion proof enclosures, resistant up to 3.000 hours in salt spray tests.

Functional characteristics

- Metal hoods and housings intended for extremely demanding environments, with special protective treatment under painting.
  Their special patented protective coating assures a high level of protection against the corrosion and erosion even in case of long-term exposure to salt mist;
- corrosion-proof aluminium with a special coating under the thermosetting powder coating colour RAL 7016 dark grey;
- FKM gasket (-40 °C...+180 °C) or silicone gasket (-60 °C...+180 °C);
- V-TYPE lever or C-TYPE lever, hoods with moulded pegs or riveted stainless steel bolts;
- durable protection against damage caused by stone chip, icing, salt mist, UV radiations and harsh gases

✔ IP65, IP66/IP69, IP66/IP67/IP69, IP66/IP68/IP69 (CG-MG) degrees of protection according to EN IEC 60529 (in mated and locked condition), according to model.

Characteristics of materials for E-Xtreme® series

- Material: aluminium die-cast
- Painting: thermosetting epoxy powder coating
- Colour: RAL 7016 (dark grey)
- Locking lever, springs and pegs: stainless steel
- Lever handle: C-Type polyamide; V-Type stainless steel
- Gasket: FKM
- Silicone-based compounds: free (except version for -60 °C... +180 °C)
- EN ISO 9227: 3.000 hours (V-Type lever and hood with moulded pegs); 2.000 hours (C-Type lever and hood with riveted stainless steel bolts)

BIG

The large dimensions of these innovative enclosures series have been chosen to offer customers an adequate space to store conductors.

Functional characteristics

- The width of the new enclosures is greater than that of previous versions: 66 mm compared to the 43 mm for standard enclosures.
- The height of BIG enclosures has also been increased to 100 mm for sizes “44.27” and “57.27” (standard versions for high models: 70 and 72 mm), and to 110 mm for sizes “77.27” and “104.27” (standard versions for high models: 76 mm).
- The cable compartment is now fully accessible during assembly (the connector insert is fully inserted in the lower half of the enclosure), offering three times the space compared to standard enclosures. This means it is possible to bend cables and pipes with greater bending radii.

Due to this important feature, the BIG enclosures are particularly suitable for MIXO modular inserts, being versatile and customizable, for multiple cable entries. Each insert, differentiated according to electric power or signal, pneumatic, optical fibre or Ethernet network current, may thus have the specific branching. One single large connector can replace what previously required two connectors.

IP66/IP69 degree of protection.

Characteristics of materials

for CB and MB series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- die cast integral pegs.

EMC

This series has been developed for industrial applications that require electromagnetic compatibility (EMC, Electromagnetic Compatibility) in accordance with the European standards that regulate the emission and immunity of the equipment.

Functional characteristics

- For use with inserts in self-extinguishing thermoplastic material (PPS polyphenylene sulphide).

UL certified for USA and Canada for NEMA 4, NEMA 4X and NEMA 12 degrees of protection (enclosure type ratings) printed on the packaging. IP65/IP69 or IP66/IP69 degree of protection according to model.

Characteristics of materials

for CK..S and MK..S series

- Chromate coating treatment, RoHS 2 conform of die casts with high surface conductivity;
- special gaskets in highly conductive material;
- single-block locking lever in stainless steel.

for CZ..S, CH..S, CA..S and MZ..S, MH..S, MA..S series

- Made of die cast aluminium alloy;
- chromate conversion coating treatment of die cast, RoHS 2 conform, with high surface conductivity;
- special gaskets in highly conductive material;
- locking device with levers, springs and pins in stainless steel;
- lever handles in self-extinguishing thermoplastic material reinforced with glass fibres, UL approved.

W-TYPE

This series has been developed for industrial applications with particularly aggressive external agents (e.g. salt atmospheres or environments).

Functional characteristics

- The enclosures do not have any internal tabs (with polarization function) thus they allow also the insertion of the CME inserts;
- enclosures have supplementary insulating strips inside for use with CME 830 V inserts;
- the inserts of CME series connectors (screw-type) have a lateral key coding that prevents installation in metal housings without such additional insulation.
- this version is distinguished by the black colour of the enclosures

UL certified for USA and Canada for NEMA 4, NEMA 4X and NEMA 12 degrees of protection (enclosure type ratings) printed on the packaging. IP65/IP69 or IP66/IP69 degree of protection according to model.

Characteristics of materials

for CK..W and MK..W series

- Chromate treated die cast;
- with epoxy thermosetting powder coating;
- gaskets in anti-aging FKM fluoroelastomer;
- single-block locking device in stainless steel

CZ..W, CH..W, CA..W series and MZ..W, MH..W, MA..W series

- Made of die cast aluminium alloy;
- Chromate conversion coating, RoHS 2 conform treatment of die casts;
- with epoxy thermosetting powder coating;
- gaskets in anti-aging FKM fluoroelastomer;
- locking device with levers, springs and pins in stainless steel;
- pegs with stainless steel coating;
- single-block lever handles in stainless steel (for CZ…W and MZ…W enclosures);
- lever handles in self-extinguishing thermoplastic material reinforced with glass fibres, UL approved (CH..W, CA..W and MH…W, MA..W versions);
- supplementary insulation inside enclosures

HYGIENIC

The Hygienic multipole connector enclosures version (series T-TYPE/H and T-TYPE/C) has been designed for installation on food industry machines and systems.

Functional characteristics

- The following improvements to the T-TYPE series have been made in order to satisfy the requirements laid down by chapter 2.1 of Machinery Directive 2006/42/EC for the machines on which they are installed:
- material cleanability and resistance to the cleaning and sanitising agents normally used in the food industry;
- materials in terms of the requirements for accidental contact with food products.

As the characterizing elements of the Hygienic Series are the different sealing gasket material and the different locking lever, hoods and covers without sealing gaskets and locking levers are the same of series T-TYPE Standard.

Characteristics of materials for T-TYPE/H series

- Enclosures in thermoplastic material, dark grey RAL 7012 colour, with high thicknesses providing structural solidity and durability.
- Sealing gaskets made by HNBR rubber formulated in accordance with FDA Guideline 21 CFR §177.2600.
- Locking levers in thermoplastic material, blue RAL 5015 colour.
- M25, M32 and M40 threaded cable entries.
- IP66/IP69 degree of protection according to EN 60529.
- Each enclosure carries its own part number, thread/size and conformity markings.
- Ambient temperature range: -40 °C / +70 °C.

T-TYPE/C series

- The Hygienic T-TYPE/C Series enclosures have been specifically designed for food and beverage ambient temperature as low as -50 °C (range: -50 °C / +70 °C);
- enclosures in thermoplastic material, dark grey RAL 7012 colour, with high thicknesses providing structural solidity and durability;
- T-TYPE/C differs from T-TYPE/H for the sealing gaskets made by in accordance with FDA Guideline 21 CFR §177.2600;
- ILME T-TYPE/C series enclosure materials have been selected according to EU n. 10/2011 regulation requirements and each component has been tested according to EU regulation n. 10/2011 and EC regulation n. 1935/2004.
- IP66/IP69 degree of protection according to EN 60529.

LS-TYPE

Series specifically developed for industrial applications where the ambient temperatures are particularly harsh (from -40 °C to +180 °C).

Functional characteristics

- For use with inserts in self-extinguishing thermoplastic material (PPS polyphenylene sulphide).

UL certified for USA and Canada for NEMA 4, NEMA 4X and NEMA 12 degrees of protection (enclosure type ratings) printed on the packaging. IP65/IP69 degree of protection.

Characteristics of materials for CK..R, CZ..R, CH..R, CA..R and MK..R, MZ..R, MH..R, MA..R series

- Made of die cast aluminium alloy;
- chromate conversion coating, RoHS 2 conform treatment of die cast;
- coated with special thermosetting powder coating with high resistant to high temperatures;
- gaskets in anti-aging FKM fluoroelastomer;
- locking device with levers, springs and pins in stainless steel;
- single-block locking levers in stainless steel (for CZ..R, CH..R 48 and MZ..R, MH..R 48 versions);
- lever handles in aluminium with special die-cast coating (for CH..R 10, 16, 24 and MH..R 10, 16, 24 versions);
- supplementary insulation inside enclosures.

HNM

Connector enclosures designed to endure high number of matings, to be used in combination with HNM connector inserts and relevant HNM removable crimp contacts, extending the guaranteed number of matings up to 10 000.

Functional characteristics

- HNM Housing (bulkhead or surface mounting) equipped with ILME proprietary design V-Type locking lever, further improved with special treatment to reduce the wear due to friction at minimum.
- HNM Hoods equipped with riveted rolling pegs and special anti-friction lubrication treatment.
- Ensuring long life span in those applications where frequent connections and disconnections are expected exceeding the standard 500 mating cycles.

Characteristics of materials for RV, RH, RF, RAC HNM series

- Made of die cast aluminium alloy;
- coated with thermosetting powder coating, epoxy-polyester;
- gaskets in anti-aging, oil resistant, grease resistant and fuel resistant vinyl nitrite elastomer;
- V-Type single locking lever, stainless steel;
- ambient temperature range -40 °C / +125 °C

CENTRAL LEVER

Series specifically designed for industrial applications with limited installation space.

Functional characteristics

- These enclosures can be installed, placed side-by-side and handled in a single operation. Furthermore, the lever's shape reduces the effort required to uncouple the inner fittings.

✔ IP65 degree of protection.

Characteristics of materials

for CH..YC, CA..YC and MA..YC, CA..YX and MF..YX series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant NBR vinyl nitrile elastomer;
- locking device with single stainless steel lever;
- stainless steel locking pegs with rollers, to reduce wear.

MIXO ONE

MIXO ONE is the aluminium housings system designed by ILME to accept the wide range of MIXO series single-sized modules.

Functional characteristics

- These robust connector enclosures (3 hood variants and 1 bulkhead mounting housing) transform each single MIXO module into a completely independent connector;
- the enclosures allow mounting of single MIXO module only in one guided way, to avoid incorrect match with the mating connector;
- the enclosures incorporate a pre-leading (first-make, last-break) PE connection terminal and contact, for the safest connector operation;
- the pins protruding from the bulkhead mounting housing act also as key guide, in cooperation with the corresponding keyway sockets in the hoods, to avoid incorrect 180° reversed mating with corresponding connector;
- the rigid locking lever is releasably mounted on moulded pegs that include a stopping teeth;
- the hoods are split in two parts (front, rear), to allow MIXO module mounting and simplify the enclosure's PE connection. Supplied with four self-threading screws and self-retaining sealing gasket;
- the bulkhead mounting housing is supplied with the module locking frame and self-retaining flange gasket;
- four optional coding pins available;
- protection covers for hoods and housings available.

✔ cURus Type 4/4X/12 pending
IP65 degree of protection

Characteristics of materials

for CXA 01..., MXA 01... series

- Die cast aluminium alloy, nickel plated;
- gaskets in anti-aging, oil resistant, grease resistant and fuel resistant NBR vinyl nitrile elastomer;
- locking device with stainless steel single lever;
- module locking frame in stainless steel;
- self-threading assembly screws in stainless steel;
- optional coding pins CR CX... in self-extinguishing thermoplastic insulating material (UL 94V-0).

For CXP 01... covers

- Shock-proof self-extinguishing thermoplastic material (UL 94 V-0) suitable for outdoor exposure, either with pegs (for enclosures with locking lever and sealing gasket) or with locking lever and sealing gasket (for enclosures with pegs) both with eyelet-terminated string (for fastening to housings) or with loop-terminated cord (for fastening to hoods, around the incoming cable);
- locking device – if any – made by the same material of the cover.

CK - MK - CKA - MKA
CQ - MQ

Thermoplastic and metallic enclosures size "21.21" for standard or aggressive environments and insulated version size "32.13"

Functional characteristics

- For use with all size "21.21" connector inserts;
- Connector inserts for use at SELV are prevented to be installed in metallic enclosures CKA-MKA, CGK-MGK (as they would not provide protective earth connection for the enclosure) thanks to a special key and keyway system in all "21.21" metallic enclosure. Insulating "21.21" enclosures accept all "21.21" inserts.
- CGK-MGK IP68 enclosures (actually IP66/IP68/IP69) available both with 2-screw locking or by 2-bayonet locking (types with suffix B).

✔ UL certified for USA and Canada for Type 4, 4X and 12 degrees of protection (enclosure type ratings, equivalent to NEMA rating), printed on the packaging.
IP44 degree of protection, IP66/IP67/IP69 by using the special fixing screw + gasket kit CKR 65(D) separately available, and suitable cable outlet device.
IP66/IP68/IP69 degree of protection for CGK-MGK enclosures equipped with CKR 65(D) kit.

Characteristics of materials

for CK, MK and CQ series

- In self-extinguishing light grey RAL 7035 or jet black RAL 9005 thermoplastic material for insulating (CQ series only available black) or metallic enclosures;
- metal enclosures in die cast zinc or aluminium alloy, according to model;
- metal enclosures with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant NBR vinyl nitrile elastomer;
- metallic enclosures with single-block locking lever in stainless or galvanized steel;
- insulating enclosures with single-block locking lever in self-extinguishing thermoplastic material.

ENCLOSURES FEATURES

THE DEGREE OF PROTECTION

The connector's housing, sealing and locking mechanism protect the connection from external influences such as mechanical shocks, foreign bodies, humidity, dust, water or other fluids such as cleansing and cooling agents, oils, etc. The degree of protection the housing offers is explained in the IEC 60 529, DIN EN 60 529, standards that categorize enclosures according to foreign body and water protection.
The following table shows the **IP (Ingress Protection) Ratings Guide**.

FIRST Index figure	Degree of protection **SOLIDS**		**SECOND Index figure**	Degree of protection **WATER**	
0		No protection	**0**		No protection
1		Protected against access to hazardous parts with the back of a hand and protected against solid foreign objects of Ø 50 mm and greater	**1**		Protected against vertically falling water drops
2		Protected against access to hazardous parts with a finger - protected against solid foreign objects of Ø 12,5 mm and greater	**2**		Protected against vertically falling water drops when enclosure tilted up to 15° (on either side of the vertical)
3		Protected against access to hazardous parts with a tool - protected againstsolid foreign objects of Ø 2,5 mm and greater	**3**		Protected against spraying water (at an angle up to 60° on either side of the vertical)
4		Protected against access to hazardous parts with a wire - protected against solid foreign objects of Ø 1,0 mm and greater	**4**		Protected against splashing water from any direction
5		Protected against access to hazardous parts with a wire dust-protected (no harmful dust deposit)	**5**		Protected against water jets from any direction
6		Protected against access to hazardous parts with a wire dust-tight (total protection against dust)	**6**		Protected against powerful water jets from any direction (similar to sea waves)
			7		Protected against the effects of temporary immersion in water at a maximum depth of 1 metre for 30 min
			8		Protected against the effects of continuous immersion in water at depth and/or duration upon agreement, more severe than for numeral 7
			9		Protected against high pressure and temperature water jets from any direction

RATING EXAMPLE

IP 6 5

Description according to IEC 60529

CHANGEOVER FROM PG THREADS TO METRIC

After 31st December 1999, the German safety standard DIN VDE 0619 (1987-09) and the standards it refers to - DIN 46319 for dimensions with metric threads and DIN 46320 (T1-T4), DIN 46255 and DIN 46259 for dimensions with Pg threads (Pg= Panzerrohr-Gewinde: literally “threads for armoured pipes”) - were withdrawn and European standard EN 50262 “Metric cable grippers for electrical installations” has been in force since 1st January 2000.

This standard defines the new sizes with metric threads for cable grippers according to EN 60423 and establishes the safety prescriptions.

Conversely, it does not specify the dimensions, such as the size of the tightening wrench, the diagonal dimension, or the dimensions of the tightness seals, as was the case in the withdrawn DIN for Pg cable grippers.

The standard came definitively into force on 1st April 2001, when the contrasting national standards were withdrawn.

It is valid in all member countries of CENELEC (European Electrical Standardisation Committee) and its publication has led to a broadening of the supply of enclosures for multi-pole connectors for industrial use, to include new enclosure versions with cable entry suitable for metric cable grippers.

Cable gripper producers have introduced the new metric series to add to the Pg size series, to gradually replace the latter type. The transition period indicated in the new standard should have ended on 1st March 2001, after which date the use of entry devices for Pg cables and, as a result, enclosures with Pg thread, should have ended in new installations. Nevertheless, both the cable entry devices and the relevant enclosures with Pg thread, may continue to be used as spare parts. For the CE marking of these items, observance of the safety conditions specified by the Low Voltage Directive is sufficient.

To distinguish hoods and surface-mounting housings with metric entries from the relevant Pg versions (marked with a C pre-code), the ILME metric types are marked with an M pre-code. The transposition table below indicates the correspondence rule adopted in most cases by ILME for creating the new metric versions.

Pg → metric transposition table

Pg	Metric

COMBINATIONS BETWEEN ENCLOSURES AND INSERTS

Identification of enclosures

Connector inserts and their enclosures are numerous and therefore the search for the correct pairing of one with another may be complex.

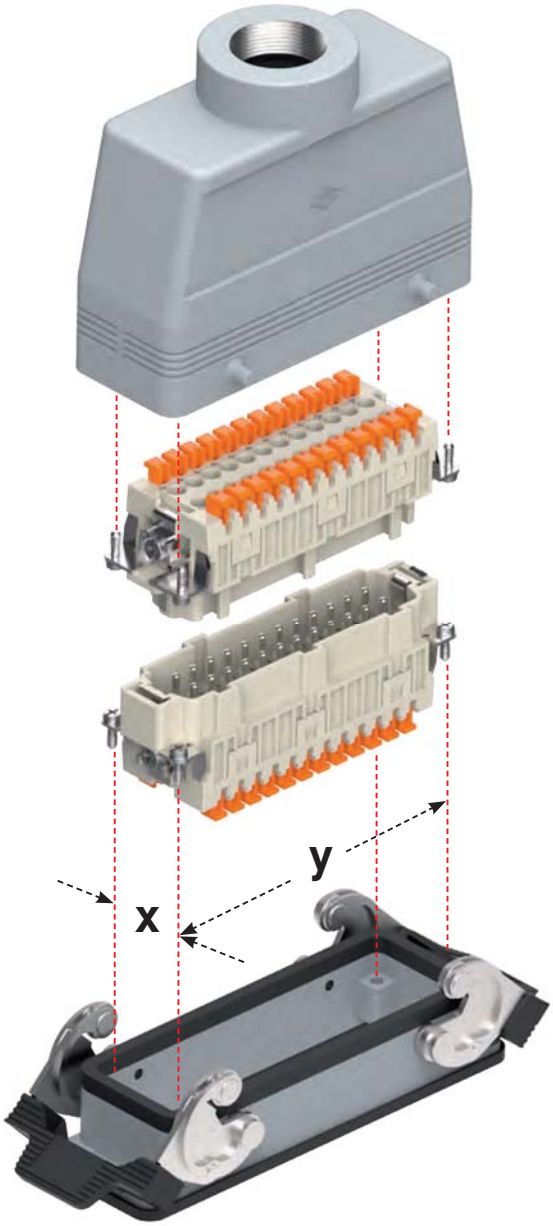

To facilitate this operation (in addition to the normal part number) the definition of **"size"** has been introduced in this catalogue.

As indicated in the illustration on the left and in the table below, the size value refers to the **"x - y" fixing screw centre distance** which constitute a unique and shared element, since they are common to both the inserts and the enclosures.

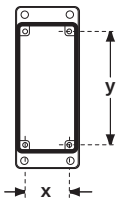

The following table shows all the sizes of the enclosures and the dimensions of the housings where the inserts will be fastened.

Enclosures size	Insert housing with x - y fixing screw centre distance
21.21	(21 x 21 mm) **
32.13	32 x 13 mm
49.16	49,5 x 16 mm
66.16	66 x 16 mm
66.40	66 x 16 mm (2 inserts)
44.27	44 x 27 mm
57.27	57 x 27 mm
77.27	77,5 x 27 mm
104.27	104 x 27 mm
77.62	77,5 x 27 mm (2 inserts)
104.62	104 x 27 mm (2 inserts)

** Dimensions relating to the insert cross-section size, not being able to identify a fixing screw centre distance, since all "21.21" sized inserts are provided with a single fixing screw.

All pages that illustrate combinable articles (inserts and enclosures) carry references as per the examples illustrated on the opposite page.

Legend

⌘ Polarity without earth ⏚ contact.

■ Can only be mounted in bulkhead housings (6/10/16/24 polarity, also usable with BIG series hoods).

• Polarity not available in CMSH version.

●* Number of modular inserts that may be inserted in the enclosures.

Polarity values in **LIGHT GREY** background are obtained using double inserts.

Polarity values in **LIGHT BLUE** background must be mounted exclusively in insulated enclosures (CM - CMA and MM - MMA versions) or T-TYPE series.

Polarity values indicated as exponentials in the CME, CMSH - CMCE inserts identify the pilot contacts for advanced opening.

▲ **Available upon request**

ACCESSORIES AND TOOLS FOR INSERTS AND ENCLOSURES

SUPPORTS AND ADAPTORS

Provide the solution to the most various installation needs. The extensive range of articles comprises: panel supports for inserts, special enclosures (housing with double outlet, wide housings, housings without outlets, to be punched out, housings for round cables, hoods), insert combination blocks, accessories for CT inserts, interface for printed circuits, kits for control equipment, plates for mounting D-Sub inserts onto enclosures, reducing plates and closure plates, protection lid for transportation, coding pins.

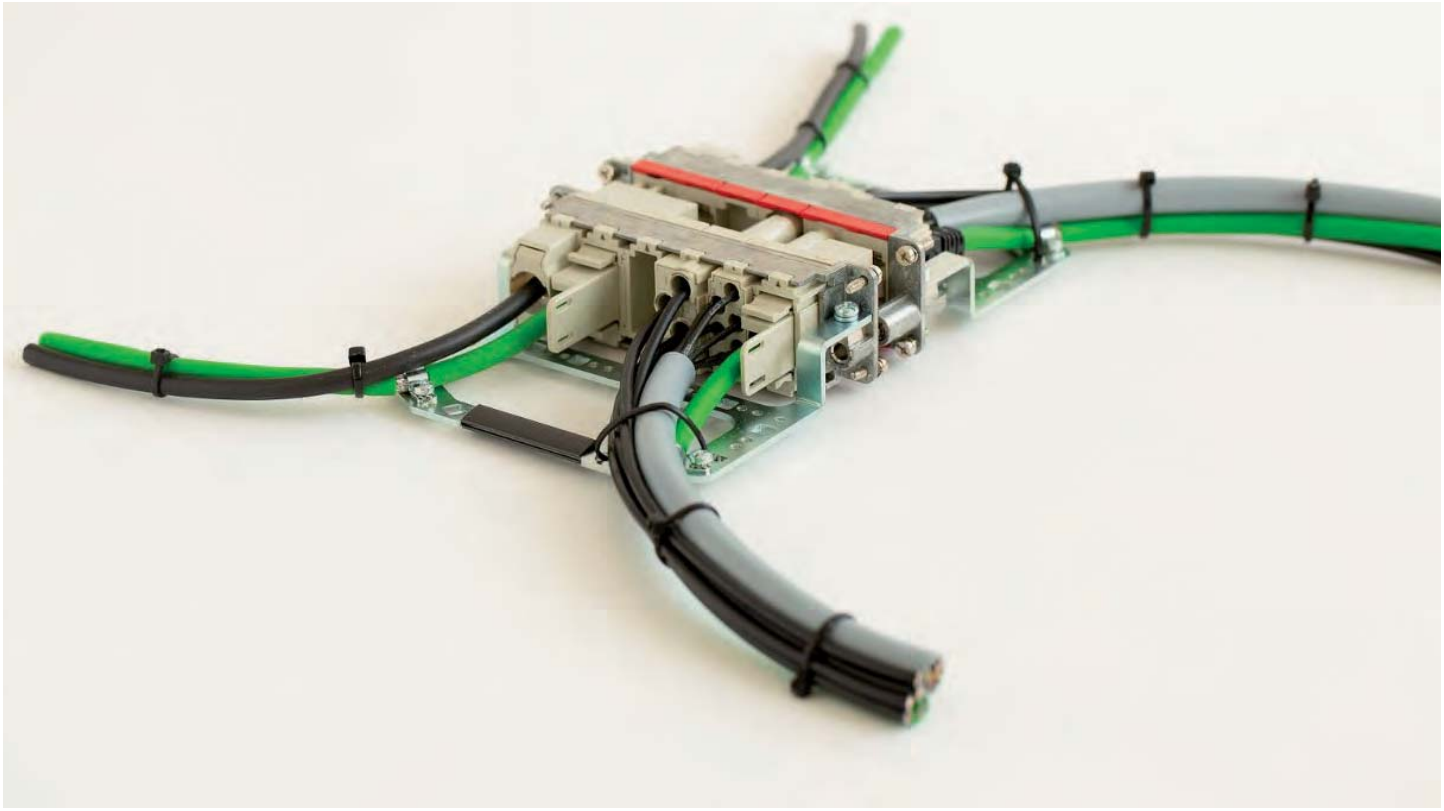

TOOLS

To guarantee the efficiency and safety of the connections a complete series of specific tools are available for contact crimping that assure the maximum quality required by the standards.
Manual or pneumatic or electric (battery operated) semi-automatic tools for light production or automatic electro-pneumatic tools for large-scale production are available, together with a complete series of complimentary tools for mounting and dismounting of the crimped contacts.

CK series with optional coding pins: avoid incorrect connections

The renewed CK series of inserts addresses the need for connector coding with the addition of coding pins CR K03, CR K04R and CR K04G.

Each connector is made to make coupling of inserts from different series impossible, by suitable key and key way. Inserts are also polarized against inadverted 180° mating. When a number of identical connectors with different functions are mounted close together, the coupling of a free part onto a non-corresponding fixed part must be be prevented in order to avoid possible damage and breakdown.

The coding pins added to the renewed CK series **allow the user to safely configure the male and female inserts** to prevent the incorrect connection of identical connectors.

With various combinations of coding pins available, it is possible to safely install up to 4 connectors of the same type but with different functions side-by-side.

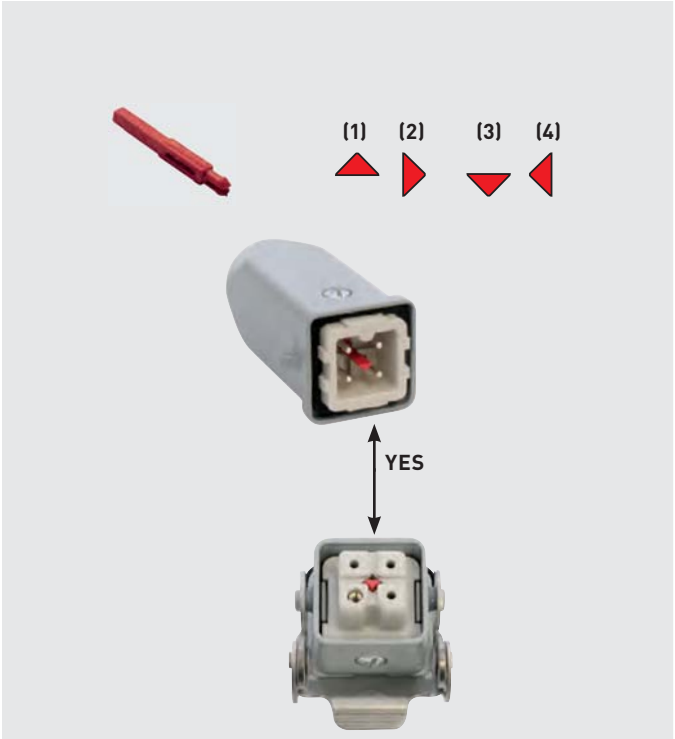

SUM UP

- **Connection up to 2,5 mm²**
- **New RAL 7032 colour**
- **Bult-in silver or gold plated contacts**

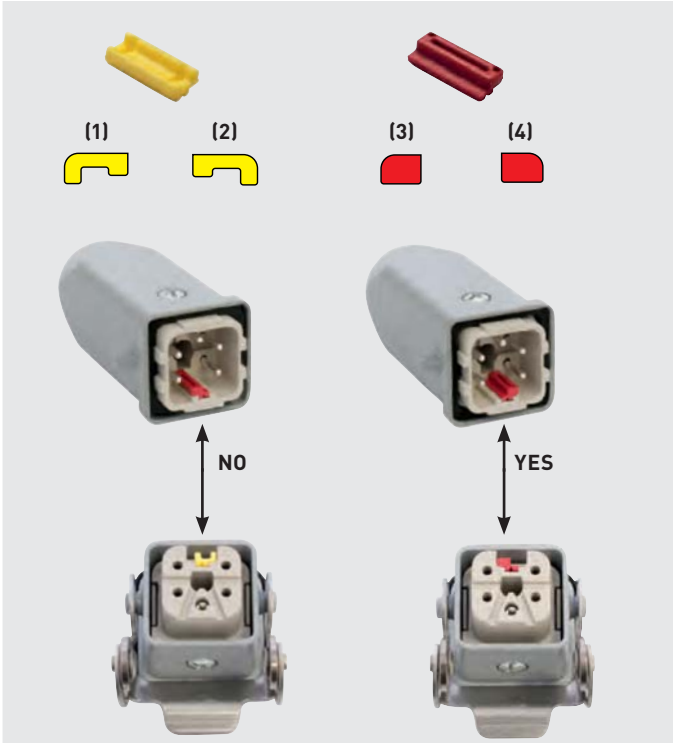

CR K03 version, for connectors 3P + ⏚

Inserting the pin in the 4 possible positions by rotating through 90° allows 4 different insert codings to be obtained.

CR K04 version, for connectors 4P + ⏚

2 pin versions available: yellow - red
Each pin has 2 possible specular insertion positions.
Alternate use of the pins allows 4 coding combinations to be achieved.

CKSH-SQUICH® series

Easy wiring in a compact space

These small but very capable connector inserts sized “21.21” are the evolution of former patented CKS series, still available upon request: thanks to a further step ahead in ILME proprietary solutions, they implement the fast, tool-less and skill-independent SQUICH® technology even in such a narrow space.

Reliable spring clamp contacts are now faster to wire thanks to the presence – also on the protective earth terminal – of the actuator pushbuttons, whose colour coding provides further visual help in identifying their function. Each pushbutton safely allows the insertion of a measuring probe even upon connector wired and under load, and is featured with a side slot for the possible spring terminal re-opening, by using a simple 0,5x3 mm flat blade screwdriver.

The conductor entries are on the top rear of the connector insert, as in former CKS inserts, providing **vertical straight terminations,** whereas screw-type CK inserts have lateral conductor entries and terminal screws on the top rear.
CKSH connector inserts are available in the traditional two polarities: 3P+ ⏚ and 4P+ ⏚, for applications with rated voltage up to 400V AC or DC and continuous rated current per pole up to 10A.

These connector inserts inherit the proprietary optional coding system introduced in the recently renewed series CK and CKS, to prevent mismating in case of multiple connectors installed close to each other. This coding system does not alter the mating face, so connectors not making use of it are fully backwards mating compatible with former products. They are fully interchangeable, with even improved performances, to the legacy much appreciated screw-type series CK (230/400V) and CKS (spring terminals), which they replace.

SUM UP

- **Easy wiring in compact size**
- **All the advantages of ILME SQUICH® connection in size 21.21**
- **Vertical and straight termination**
- **Full 400V voltage rating compared to 230/400V of series CK**
- **Bult-in silver plated contacts**

Requiring no wiring tool and no special wire preparation, they provide **excellent conductor fastening** with great resistance to strong vibrations.
Connecting capacity of terminals is from 0,14 mm² to 2,5 mm² (26 to 14 AWG) for unprepared conductors. Use of prepared conductors (terminated with crimped ferrule) is up to 1,5 mm² /16 AWG, suitable to rated current up to 10A per pole, due to the relatively limited number of poles.

no need of wiring tools

CD - CDD series

CD series

It is a multipole connector series for crimped connections made with removable crimp contacts **CD** series.
There are 5 different sizes available (6 polarities):
- "21.21" with two inserts, respectively **CD 07** (7 P + ⏚) and **CD 08** (8 P) for SELV applications;
  NOTE – These two polarities are coded to avoid their incorrect cross-mating. **CD 07**, being equipped with a pass-through PE connection that does not serve as equipotential bonding of a metal enclosure, is suitably safetly-coded to avoid mismatch with a metal enclosure of this size.
- "49.16" with **CD 15** (15 P + ⏚) provided by 3 rows of 5 contact seats each;
- "66.16" with **CD 25** (25 P + ⏚) provided by 2 outer rows of 9 contact seats each and 1 inner row with 7 contact seats;
- "77.27" with **CD 40** (40 P + ⏚) provided by 4 rows of 10 contact seats each;
- "104.27" with **CD 64** (64 P + ⏚) provided by 4 rows of 16 contact seats each.

It is also possible to mount **two inserts side-by-side in a connector enclosure** is also given:
- for inserts size "66.16" (**CD 25** + **CD 25 Z)** to get a **50 P** + ⏚ connector with connector enclosures size "66.40";
- for inserts size "77.27" (**CD 40** + **CD 40**) to get an **80 P** + ⏚ connector with connector enclosures size "77.62";
- for inserts size "104.27" (**CD 64** + **CD 64**) to get a **128 P** + ⏚ connector with connector enclosures size "104.62".

The last four sizes of the first list are described in **EN 175 301-801:2006** European standard, which derives from the old German standard **DIN 43 652**, whose first edition dates back to the Seventies of last century. This standard provides dimensional standardization for these four sizes of connector inserts as well as for **CD series crimp contacts,** solid, machined, used by these connectors, and of the main types (and sizes) of relevant **connector enclosures,** including interface dimensions between the connector inserts and the relevant connector hood or housing, overall dimensions of locking levers and pegs, etc. This standard provides ground for the dimensional standardization of the other connector sizes (e.g. "44.27", "57.27") for all series of connector inserts with the same size and for all connector enclosure series with these sizes.
As for any series of connector inserts for crimped connections, the polarity is to be intended as "*up to*", being always possible to fit a connector insert with a reduced number of crimped connections, suiting the specific application. In this regard, see e.g. next page for use of **CD** series connector inserts at special (higher) voltages.

These connectors cover applications for rated voltage up to **250V AC/DC in pollution degree 3** (industrial environment) when connectors are fully equipped with contacts, and for rated currents up to **10A** per pole (derating diagram show actual current carrying capacity as a function of number of poles, conductor size and ambient temperature).

The PE connection for size "21.21" **CD 07** is a pass-through (crimp) connection that does not provide equipotential bonding to earth to a possible metal connector enclosure, hence the safety coding implemented in inserts **CDM 07** and **CDF 07** to avoid mismatch with metal enclosures.

The PE connection for the other sizes is provided by a screw terminal on the side of pole #1, and by lateral mating contacts. The PE terminal of the inserts provide earthing to the metal enclosures.

CDD series

It is the high density evolution of **CD** series. It provides choice of **5 different sizes** (5 polarities) of multipole connector inserts for crimped connections made with removable crimp contacts **CD** series:
- "44.27" with **CDD 24** (24 P + ⏚) provided by 6 rows of 4 contact seats each;
- "66.16" with **CDD 38** (38 P + ⏚) provided by 2 outer rows of 10 contact seats each and 2 inner rows with 9 contact seats each;
- "57.27" with **CDD 42** (42 P + ⏚) provided by 6 rows of 7 contact seats each;
- "77.27" with **CD 72** (40 P + ⏚) provided by 6 rows of 12 contact seats each;
- "104.27" with **CDD 108** (64 P + ⏚) provided by 6 rows of 18 contact seats each.

It is also possible to mount two inserts side-by-side in a connector enclosure is also provided:
- for inserts size "66.16" (**CDD 38** + **CDD 38**) to get a **76 P** + ⏚ connector with connector enclosures size "66.40";
- for inserts size "77.27" (**CD 72** + **CDD 72**) to get a **144 P** + ⏚ connector with connector enclosures size "77.62";
- for inserts size "104.27" (**CDD 108** + **CDD 108**) to get a **216 P** + ⏚ connector with connector enclosures size "104.62".

These connectors cover applications for rated voltage up to **250 VAC/DC in pollution degree 2** (suitable for industrial environment once used inside enclosures >IP54) when connectors are fully equipped with contacts, and for rated currents up to 10A per pole (derating diagram show actual current carrying capacity as a function of number of poles, conductor size and ambient temperature).
The PE connection for all sizes is provided by a screw terminal on the side of pole #1, and lateral mating contacts. The PE terminal of the inserts provide earthing to the metal enclosures.

Even when the coding function is not required, **it is highly recommended to use CRM and CRF coding pins** (see pages 685, 686 in this catalogue) **with CD and CDD connector inserts**, to reduce movements when mating and unmating the connectors, to avoid contact damage. To this aim, standard EN 175 301-801:2006 specifies a max allowed angular longitudinal fluctuation of ± 5%.

Special voltages for CD series

If all the contacts are used, CD connector inserts may be used with voltage up to 250V (first column) pollution degree 3 in accordance with standard EN 61984.
If the number of contacts is reduced and the contacts assigned accordingly, these connectors may be used at higher voltages. This is possible because the decrease in the number of contacts leads to an increase in clearences (insulating distances in air) and creepage distances (insulating distances along the surface).

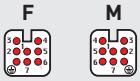

When the contacts are arranged as shown below, the inserts may be used at rated voltage of 500V (second column) pollution degree 3 in accordance with standard EN 61984.

For use up to 250V pollution degree 3

- characteristics according to EN 61984:
  10A 250V 4kV 3
  10A 230/400V 4kV 2
- cULus (UL for USA and Canada), CSA, CEC, DNV-GL, BUREAU VERITAS, EAC certified
- rated voltage according to UL/CSA: 600V
- insulation resistance: ≥ 10 GΩ
- ambient temperature limit: -40 °C ... +125 °C
- made of self-extinguishing thermoplastic resin UL 94V-0
- mechanical life: ≥ 500 cycles
- contact resistance: ≤ 3 mΩ
- for applications requiring higher voltages, please see the special voltage application section on page 65
- **it is recommended to crimp the contacts with crimping tools homologated by ILME** (please see the crimping tool section 10A contacts, CDF and CDM series on pages 708 - 741)
- for max. current load see the connector inserts derating diagram below; for more information see page 28

Special voltages for CDD series

When all the contacts are used, CDD series connector inserts may be used with voltage up to 250V (first column); pollution degree 2, in accordance with the standard EN 61984.
If the number of contacts is reduced and the contacts assigned accordingly, these connectors may be used with higher voltages. This is possible because the decrease in the number of contacts leads to an increase in clearences (insulating distance in air) and creepage distances (insulating distances along the surface).
When the contacts are arranged as shown below, the inserts may be used at rated voltages of 400V (second column) and 500V (third column); pollution degree 2, in accordance with the standard EN 61984.

for use up to 250V pollution degree 2	for use up to 400V pollution degree 2	for use up to 500V pollution degree 2

CDSH-SQUICH® series

High density without tools (spring connection contacts)

The CDSH-SQUICH® series (with spring and actuator button) are the logical **evolution of the CDS series.**

The continuous demand for a greater number of poles and smaller dimensions has led to the design and manufacture of the new CDSH series, which offers single connectors with a **maximum number of 84 poles** that occupy the **same space of standard connectors** with screw/spring connection.

Each of the spring terminals has an actuator button, suitably shaped and incorporated in the cavity. When this button is pushed, it triggers the closure of the spring device of the corresponding terminal, safely and reliably connecting the conductor to its respective electric contact in the connector.

The actuator buttons are supplied raised, in the "open terminal" position and are **easily distinguisheable by the orange colour** which makes them stand out from the insulating body of the connector.

The advantage of this exclusive solution is that **the actuators disappear completely within the body of the connector,** making it easy to identify terminals not yet closed and **eliminating possible obstacles** to the movement of the conductors during installation and maintenance.

SQUICH® technology requires no tools **to activate the terminal and a simple operation is all you need to make the connection.** Refer to SQUICH® Connection operating principles on page 24.

SUM UP

- **Greater pole density as compared to existing connector with screw terminals.**
  SAVE SPACE +70%
- **Reduced wiring time.**
  SAVE TIME -50%

STANDARD	CDSH - HIGH DENSITY	
16A	10A	
06 poles	09 poles	+50%
10 poles	18 poles	+80%
16 poles	27 poles	+70%
24 poles	42 poles	+75%
32 poles	54 poles	+70%
48 poles	84 poles	+75%

- **Wiring tool is not necessary**
- **Quick identification of wired and non-wired terminals**
- **Terminals already open and ready for conductor clamping**
- **Option to use wires up to 2,5 mm²**
- **Bult-in silver plated contacts**
- **Excellent fastening solution**
- **Great resistance to strong vibration**

CDSH series can be used with the whole range of ILME enclosures

It is possible to insert in the mating area the new **CR CDS plastic coding pin** that enables the polarisation of inserts in a wide range of combinations. This means that it is possible to install side by side identical connectors with different functions.

The CR CDS coding pins **can also be used in combination with CR 20 / CRM / CRF / CR 72 metal pins** instead of insert fixing screws in order to increase the number of possible combinations. Each position of the coding pin used on the female insert must correspond to an unused position on the male insert.

The required number of coding pins, depending on the size of connectors, and the maximum number of possible codings is shown in the table 1.

Table 1. CDSH series - Coding with CR CDS pins

Size of connectors	Slots for coding pins (M) = male insert (F) = female insert	Required coding pins for each coupling	Possible codings
9P + ⏚	3 (M) + 3 (F)	3 2 (M) + 1 (F)	3
18P + ⏚	6 (M) + 6 (F)	6 3 (M) + 3 (F)	20
27P + ⏚	9 (M) + 9 (F)	9 5 (M) + 4 (F)	126
42P + ⏚	14 (M) + 14 (F)	14 7 (M) + 7 (F)	3.432

CDSH-SQUICH® series

TECHNICAL FEATURES

Insert series		CDSH-SQUICH®
No. of poles [1]	Main contacts +	**9, 18, 27, 42, (54), (84)**
	auxiliary contacts	—
Rated current [2]		10A
EN IEC 61984	rated voltage	400V
	rated impulse voltage	6kV
	pollution degree	**3**
EN IEC 61984	rated voltage	4000V / 690V
	rated impulse voltage	6kW
	pollution degree	**2**
Contact resistance		≤ 1 mΩ
Insulation resistance		≥ 10 GΩ
Ambient temperature limit (°C)	min	-40
	max	+125
Degree of protection	with enclosures (according to type)	IP65, IP66/IP69, IP66/IP67/IP69, IP66/IP68/IP69
	without enclosures	IP20
Conductor connections		spring type with actuator button
Conductor cross-sectional area	mm^2	0,14 - 2,5 (for wires with crimped ferrule, usable section: up to 1,5 mm^2
	AWG	26 - 14 (AWG 16 with crimped ferrule)
		26 - 16 prepared with crimped ferrule
Mechanical endurance (mating cycles)		≥ 500

1) Polarities shown in brackets may be achieved by using two inserts in their own double sized housings.
2) Please check the insert load curves to establish the actual maximum operating current according to the ambient temperature.

SQUICH® Connection technology

In the layout below the wires are connected to the socket and plug insert contacts by means of a spring terminal with actuator button.
This type of connection offers the following advantages:

- no special wire preparation (other than stripping);
- it offers an excellent fastening solution and a great resistance to strong vibrations;
- it allows the use of solid and flexible wires with cross-sections between 0,14 and 2,5 mm^2 (AWG 26 - 14);
- for wires with crimped ferrule, usable section: to 1,5 mm^2 (AWG 16);
- a screwdriver with a 0,5 x 3,5 mm blade is the only tool required to remove the wire from the contact;
- the profile of the actuator button allows the section of a test probe.

WIRING

step 1
Deeply insert a stripped conductor into a round seat

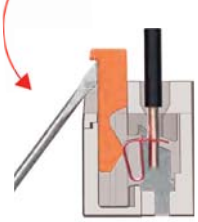

step 2
Push the actuator button to close the terminal.

RE-OPENING

0,5 x 3,5 mm blade

step 3
Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

CDSH NC-SQUICH® series

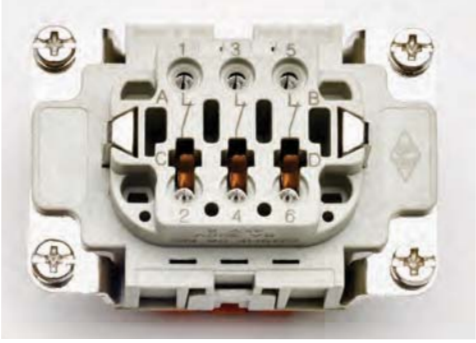

3 contact pairs with an AutoShort NC contact element

ILME developed an **innovative connector suitable for interfacing measuring current transformers (CTs)** with the dedicated electronic measurement processing equipment. Use of such systems is increasing in transformer substations with the diffusion of smart grid concepts due to the growth of self-standing power generation plants (photovoltaic, wind).

The CDSH...NC connector has the **same dimensions of a 6 poles size "44.27" CSH connector,** and it is **easy to wire** thanks to ILME proprietary SQUICH® tool-less quick connection technology.

Inside the female insert, for each of the three contact pairs 1-2, 3-4 and 5-6, a **suitable spring element is foreseen,** providing a NC (normally closed) contact between the female contact pair. The said short-circuit element automatically establishes a short-circuit between the female contact pair while the connector is being unmated, before the complete withdrawal of the corresponding male connector.

This protects the measuring current transformer's secondary windings to which this connector is deemed to be wired, against the high voltage that would arise if the ends of each winding were left open while the primary winding (the power line busbars) are still under load.

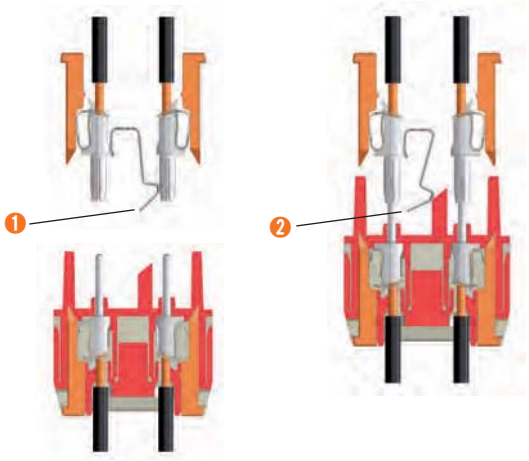

During the mating of these specially designed connector inserts, three corresponding actuator buttons realized on the mating face of the male connector, once the male contacts are already engaged with the corresponding female contacts, push aside the facing end of the AutoShort NC contact element, in order to release the short-circuit previously provided. In mated condition the proper termination of the secondary windings of the CT must be provided by the customer's downstream circuit, e.g. by suitable resistors.

AUTOSHORT NC
Operating principles

CDSH...NC connector can be used only for connecting up to three secondary (output) windings of measuring current transformers to specific measuring circuits; on the female side each contact pair is provided with said AutoShort NC contact element ❶ to keep the secondary winding ends shorted while the female connector is not engaged with the male connector, thus avoiding damages to the insulation of the current transformer and consequent hazardous condition for the personnel operating the unmating of the connector while the power busbars are energized. When the female and male connectors are being mated ❷, the short-circuit is released after proper electrical engagement of the two connector halves, thus allowing again current measurement by the dedicated electronic measurement processing equipment wired on the male connector side.

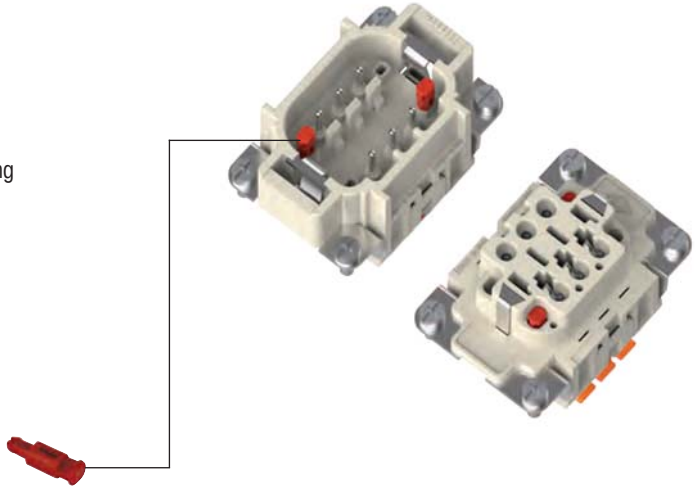

The new connector inserts can be used in size "44.27" connector enclosures, either metal (conductive) or thermoplastics (insulating), with up to IP68 degree of protection (IP66/IP68 with series CG/MG), within enclosures for aggressive environments (series "W") or with up to IP66/IP69 within series T-TYPE HYGIENIC enclosures for hygienic applications.

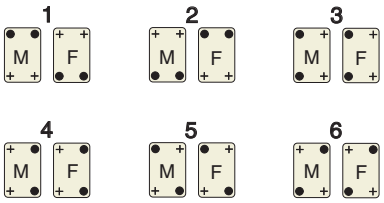

Female inserts Male inserts

AUTOSHORT NC
Coding pins

Optionally, it is possible to add **four special coding pins CR CDS** that allow up to 6 different codings, by installing 2 coding pins on the male connector half and correspondingly 2 on the female connector half, according to the coding scheme provided in the following:

CODING SCHEME

Legend

● = coding pin installed
\+ = no coding pin

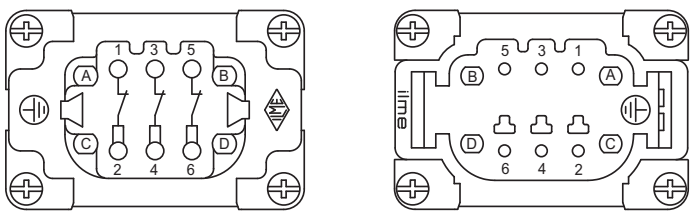

The **CR CDS coding pins can also be used in combination with other CR 20 / CRM / CRF / CR 72 metal pins** instead of insert fixing screws in order to increase the number of possible combinations.

AUTOSHORT NC
PIN Assignment

Female inserts with NC shorting contacts between contacts of pairs 1-2, 3-4, 5-6, opening upon with male inserts.
Pin assignment of contacts for the connector is the following:

Pin	Assignment
1	Winding 1 start
2	Winding 1 end
3	Winding 2 start
4	Winding 2 end
5	Winding 3 start
6	Winding 3 end

CDSH NC-SQUICH® series
TECHNICAL FEATURES

Insert series	CDSH NC-SQUICH®
Electrical contacts	6 spring clamp type built-in contacts with actuator (SQUICH®) made by copper alloy, silver plated
Rated current	**6A 250V 4kV 3; 6A 500V 4kV 2** according to EN 61984 Fault condition (rated short time thermal current): 50A for 1 s
Contact resistance (connector mated)	≤ 3 mΩ
Insulation resistance	≥ 10 GΩ
Ambient temperature limit (°C)	min. -40 max. +125
Degree of protection	IP20 (connector without housing), IP65 or IP66 (connectors in T-TYPE housings), IP66 or more (connectors in ILME metal housings)
Conductor connections	3 pairs of contacts (with autoshunt on each pair of female connector), plus protective earth, size 44.27 housings
Conductor cross-sectional area	0,14 - 2,5 mm^2 (AWG 26 - 14) for solid or unprepared stranded copperwires)
	0,14 - 1,5 mm^2 (AWG 26 - 16) for for stranded copper wires prepared with ferrules
Flammability	94V-0 according to UL 94
Mechanical endurance (mating cycles)	≥ 50

SQUICH®-spring connection technology

WIRING

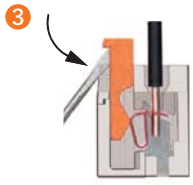

Deeply insert a stripped conductor into a round terminal.

Push the actuator button to close the terminal.

RE-OPENING

Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

CDA-CDC series

The compact inserts

CDA inserts with screw-type termination

The screw-type connector inserts CDA series with 10 and 16 poles + ⏚ are now made using screw-type terminals (CNE series) with a built-in wire protection pressure plate of proven reliability and practicality.

The wire protection pressure plate preserves the conductors in case of wiring with **unprepared conductors** (i.e. without wire end ferrules) up to a maximum wire cross-section of **4 mm²** (12 AWG).

The variant without a wire protection pressure plate (code with suffix X) is also available, for use with **prepared conductors** featuring a wire end ferrule with a maximum usable wire cross-section of **2,5 mm²** (14 AWG).

with 4 mm² for unprepared conductors

with 2,5 mm² for prepared conductors

CDA-CDC INSERTS SUM-UP

- **According to standard EN 61984:**
  16A 250V 4kV 3
  16A 230/400V 4kV 2
- **Insulation resistance: ≥ 10 GΩ**
- **Ambient temperature limit: -40 °C ... +125 °C**
- **Construction material: UL 94 V-0 self-extinguishing thermoplastic resin**
- **Mechanical life: ≥ 500 cycles**
- **Built-in silver plated contacts (only CDA series)**

The applications

Like those of the previous series, CDA and CDC inserts and their enclosures are used in accordance with the recommendations EUROMAP 12, EUROMAP 13, EUROMAP 14-1, EUROMAP 16 and EUROMAP 62 (European industry consortium for moulding machines and plastic processing).

The CDC inserts can also be used with CC series crimp contacts made of iron/constantan (Fe-CuNi) for the cabling of J type thermocouples in accordance with IEC/EN 60584-1 (EUROMAP 14-1 recommendation).

The CDA/CDC series inserts can also be coupled with previous insert versions.

CDC inserts with crimp termination

The crimp termination CDC series of inserts with 10 and 16 poles + ⏚ now adopt the tried and tested contact retention technique of connector series CCE and CQE for removable crimp contacts (series CC, max 16A).

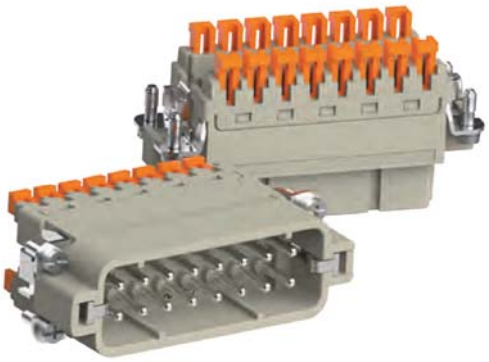

CSAH-SQUICH® series

Connection without tools, slim version

CSAH-SQUICH® inserts

To improve high performance industrial connections, ILME has developed and evolved its own spring clamp connectors to meet the market needs and make installation simpler.

The SQUICH® inserts are adaptable to any type of solid or flexible conductor, including unprepared conductors

Each of the spring terminals has an actuator button, suitably shaped and incorporated in the cavity.
When this button is pressed, it triggers the closure of the spring device of the corresponding terminal, safely and reliably connecting the conductor to its respective electric contact in the connector.
The actuator buttons are supplied raised, in the "open terminal" position and are easily distinguisheable by the **orange colour which makes them stand out from the insulating body of the connector.**
The advantage of such an **exclusive solution** is that the **actuators disappear completely within the body of the connector,** making it easy to identify terminals not yet closed and eliminating possible obstacles to the movement of the conductors during installation and maintenance. In this manner during the cabling phase the **need for a tool to activate the terminal is completely eliminated and a simple operation is all you need to make the connection.**

CSAH-SQUICH® INSERTS SUM-UP

- **Reduced space**
- **Reduced wiring time**
- **No need for tools**
- **Quick identification of wired and non-wired terminals**
- **Terminals already open and ready for conductor clamping**
- **Built-in silver plated contacts**
- **Excellent fastening solution**
- **Great resistance to strong vibration**

Shaped button for measuring instruments

The profile of the button used in the **SQUICH®** series inserts **allow a measuring probe to be inserted.**

This allows checks to be carried out to ensure that the wiring is correct.

Simple terminal reopening

To reopen the terminals, simply introduce the tip of a common 0,5 x 3,5 mm flat blade screwdriver in the shaped pocket on the head of the actuator, and slightly rotate the screwdriver downwards: this will lift the actuator into its open terminal position.

SQUICH® Connection technology

WIRING

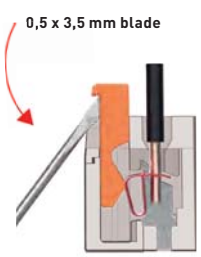

step 1
Deeply insert a stripped conductor into a round seat

step 2
Push the actuator button to close the terminal.

RE-OPENING

step 3
Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

CNE - CNE...RY series

CNE series

CNE Series are the evolution of former series CN, one of the oldest and most successful heavy-duty multipole connection products of ILME. The evolution consisted in the complete overhauling of the connector bodies, the introduction of a **captive stainless steel protection plate for unprepared conductor strands** in the screw terminals, the adoption of galvanized steel terminal screws and the **increase of the rated voltage from former 400V to 500V.**

The ancestor series CN was intermateable with the German industry standard design with screw-type terminals, for **16A** rated current per pole and solid pins Ø 2,5 mm. The two larger sizes of this series – ILME designation "77.27" for **16 P + PE** and "104.27" for **24 P + PE** – share the dimensions of a similarly old and very popular series (series **CD** in this catalogue) dimensionally standardized by the historic standards of series **DIN 43652,** later replaced by **EN 175 301-801.** The lower sizes "44.27" for **6 P + PE** and "57.27" for **10 P + PE** were proportionally scaled down from the above mentioned larger sizes.

CNE connectors series come in two main variants:
- with pressure (protection) plate, **for unprepared conductors,** to preserve conductor strands from being cut from the screw head, or
- without pressure (protection) plate **(suffix X), for prepared conductors** (crimped with insulated or non-insulated wire ferrule of suitable size).

NOTE – Prepared conductors in principle do not need any pressure (protection) plate. Use of prepared conductors is possible – although with no added value – also for CNE with pressure plate, but the highest conductor cross-sectional area 4 mm^2 / 12 AWG can be used only unprepared.

CNE series connection technology is **screw-type,** requiring very simple and popular tools, like a 0,8x4 mm flat blade screwdriver or a Ph0 cross-headed screwdriver (torque to apply 0,5 Nm). All connectors series CNE have their contact holder (wiring side) duly cone shaped around each terminal cavity to securely guide all stranded wires inside the terminal seat. Terminal screw are unlosably retained in their seats. **All terminals are presented completely open** (unscrewed), ready to be wired, to allow spare of assembly time. The PE terminal is also screw-type (M4 screw with pressure plate, torque to apply 1,2 Nm) and is located on the mounting bracket on the pole #1 side. It covers the same conductor cross-sectional area range of the line terminals. Due to its design, the PE terminal allows two conductors per terminal (one on each side of the M4 screw); in such case it is recommended that these conductors are of the same size. Series CNE connectors are **polarized against 180° incorrect mating** by a system of keys and keyways along the contour of their mating faces.

CNE...RY variant

By partial or total replacement of the four M3 fixing screws, CNE connectors series may also use three different series of **coding and guide pins** to implement, e.g. in case of multiple identical connectors installed side by side, an "idiot-proof" system to avoid mating mismatches with counterpart.

NOTE – Coding may be obtained respectively by using: **CR 20 or CR 20 D single coding pins,** for up to 6 different codings, **CRF / CRM or CRF D / CRM D double coding and guide pins,** for up to 16 different codings, and the previous **double coding and guide pins plus a third element CR 72 or CR 72 D,** to allow up to 72 different coding combinations.

Connectors series CNE come in four sizes:
- size "44.27" 6 P + ⏚
- size "57.27" 10 P + ⏚
- size "77.27" 16 P + ⏚
- size "104.27" 24 P + ⏚

Two inserts – one with suffix **N** to denote special numbering, respectively CNEF/M 16 TN (or TXN) with pole numbering 17 to 32, CNEF/M 24 TN (or TXN) with numbering 25 to 48 – can be used with connector enclosures sized "77.62" or "104.62" to provide:
- size "77.62" 32 P + ⏚
- size "104.62" 48 P + ⏚

CNE...RY series for high temperatures

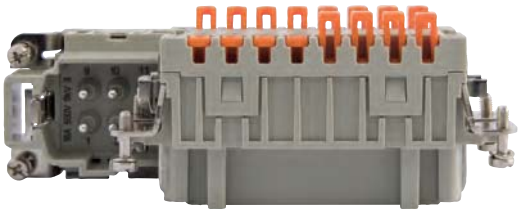

CNE series are available also in the **CNE...RY variant for use at high ambient temperatures up to 180 °C.** Thanks to a specific thermoplastic insulating material (whose natural colour is brown) and in combination with the dedicated connector enclosures "R-Type" for 180 °C temperature withstand, these multipole connectors are particularly suitable for installation in places in proximity of heat sources such as near ovens, moulds for thermoplastic or rubber moulding, moulds in foundries, paint booths, etc.

CSH-SQUICH® series

CSH-SQUICH® series

Spring connection with actuator button

In this view the wires are connected to the insert contacts by means of a spring terminal with actuator button.

CSH-SQUICH® INSERTS SUM-UP

- **No special wire preparation (other than stripping)**
- **No wiring tool is necessary**
- **It offers an excellent fastening solution and a great resistance to strong vibrations;**
- **It allows solid and flexible wires with sections between 0,14 and 2,5 mm² (26-14 AWG) to be used (both with non-prepared conductors and those prepared with ferrule)**
- **It greatly reduces insert preparation and cabling times**
- **Built-in silver plated contacts**

Shaped button for measuring instruments

The profile of the button used in the **SQUICH®** series inserts **allow a measuring probe to be inserted.**

This allows checks to be carried out to ensure that the wiring is correct.

Simple terminal reopening

To reopen the terminals, simply introduce the tip of a common 0,5 x 3,5 mm flat blade screwdriver in the shaped pocket on the head of the actuator, and slightly rotate the screwdriver downwards: this will lift the actuator into its open terminal position.

CNE and CSH-SQUICH® series

1) Polarities shown in brackets may be obtained by using two inserts in their own double-sized housings
2) Please check the inserts derating diagrams to establish the actual maximum operating current according to the ambient temperature, the conductor cross-sectional area, the polarity of the connector, and any external constraint may derive e.g. by the continuous operating temperature sustained by the chosen conductor sheathing or by end-product safety standards fixing max allowed temperature rise on terminals (e.g. 30 K, 45 K or 50 K)

CSH **S**-SQUICH® series
TECHNICAL FEATURES

Demand for cost-effective solutions for large serial production is constantly growing and stamped contacts meet the basic needs fur such applications.

- ILME stamped contacts, thanks to their **silver-plated** treatment are suitable for up to **500 mating cycles,** consistently with th turned ones.

In order to easily recognize them, each insert is marked with an "S" at the end of the product code. meaning "stamped".

- Stamped contacts applied to the SQUICH® connection feature all the well-known advantages of the ILME proprietary technology:
  - **reduced wiring time** (spring-clamp terminals are presented "open", with the actuator button lifted up); up to **50% saving time** compared to screw connection;
  - **operator skill independence** (no need to open the spring-clamp terminals by direct operation of a possibly unsuitable tool on the spring);
  - **no special wire preparation** (only stripping at the correct length);
  - no wiring tool needed;
  - **resistance to strong vibrations** typical of the self-compensating spring-clamp technology;
  - possibility **to use solid and flexible** stranded copper conductors with range of cross sectional area between 0,14 mm^2 and 2,5 mm^2 (26 – 14 AWG);
  - possibility to insert the **test probe** of a measurement instrument in the cavity of the actuator button (proprietary design);
  - simple re-opening of a terminal (if needed) using a flat blade screwdriver on the actuator button dedicated side window.

stamped silver-plated contacts

size "77.62" **page:**

C-TYPE IP65/IP66 **424 - 429**
W-TYPE for aggressive environments **525**
E-Xtreme® corrosion proof **546**

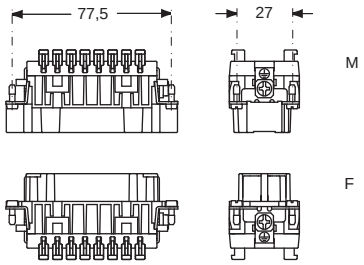

inserts,
spring terminal connections

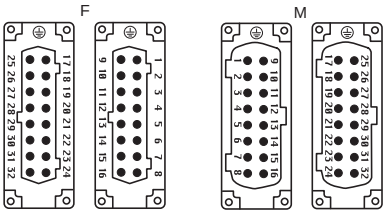

STAMPED CONTACTS, SILVER PLATED

description	part No.	part No.
spring terminals with actuator button female inserts with female contacts, No. (1-16) & (17-32) male inserts with male contacts, No. (1-16) & (17-32)	**CSHF 16 S** **CSHM 16 S**	**CSHF 16 SN** **CSHM 16 SN**

- characteristics according to EN 61984:
  16A 500V 6kV 3
  16A 400/690V 6kV 2
- cURus, CSA, CQC, DNV-GL, BV, EAC pending
- rated voltage according to UL/CSA: 600V
- insulation resistance: ≥ 10 GΩ
- ambient temperature limit: -40 °C ... +125 °C
- made of self-extinguishing thermoplastic resin UL 94V-0
- mechanical life: ≥ 500 cycles
- contact resistance: ≤ 3 mΩ

contacts side (front view)

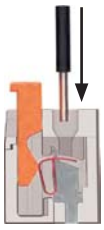

- inserts for connectors with the following conductor cross-sectional areas: 0,14 - 2,5 mm² - AWG 26 - 14
- conductors stripping lenght: 9...11 mm

SQUICH®-spring connection technology

WIRING

1

Deeply insert a stripped conductor into a round terminal.

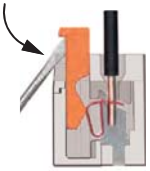

2

Push the actuator button to close the terminal.

RE-OPENING

3

Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

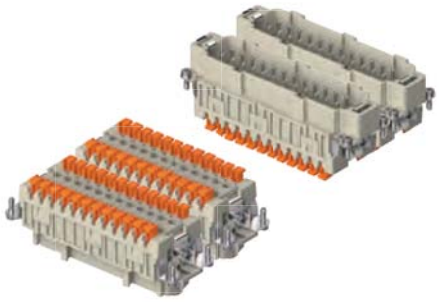

dimensions shown in mm are not binding and may be changed without notice

Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

16A 500V 6kV 3

CCE series

TECHNICAL FEATURES

CCE series are the evolution of former CC series for removable crimp contacts CC series, with rated current up to 16A per pole.
It shares the four (six with double inserts) mating interfaces with series: **CNE** (screw-type), **CSH** (spring-type with actuator button, SQUICH® technology), **CSS** (double spring-type), CT (screw-type with 45° terminal block), **CTSE** (spring-type with 45° terminal block).
As for CNE series with former CN series, also CCE series are the result of a complete overhaul of the preceding CC series. Whereas CC series relied upon additional stainless steel spring element to perform contact retention, CCE series applies the modern and equally reliable concept of retention in the insulating body by a resilient element directly obtained in the contact holder. This enhances insulation, simplifies manufacturing and improves reliability.

CCE series, through increase of creepage distances, attains as well the **rated voltage increase to 500V from previous 400V value.**
Solid machined crimp contacts and the relevant connector inserts are the preferred option in fields of application subject to high vibration levels, such as railway rolling stock and everywhere transportation and moving parts are foreseen with e.g. motors as potential source of vibration.

Insert series		**CCE**
No. of poles 1)	Main contacts + ⏚	**6, 10, 16, 24, (32 = 2x16), (48 = 2x24)**
	auxiliary contacts	—
Rated current 2)		16A
EN IEC 61984 Pollution degree 3	rated voltage	500V
	rated impulse voltage	6kV

SQUICH®-spring connection technology

WIRING

1

Deeply insert a stripped conductor into a round terminal.

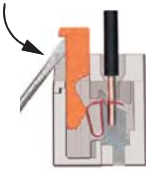

2

Push the actuator button to close the terminal.

RE-OPENING

3

Insert a **0,5 x 3,5 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

dimensions shown in mm are not binding and may be changed without notice

CSS series

Connection with dual spring terminal per pole

Series **CSS** is the “two spring clamp terminal per contact” counterpart of series CSH connectors, which have one spring-clamp terminal per contact.

CSS connection technology see page 23

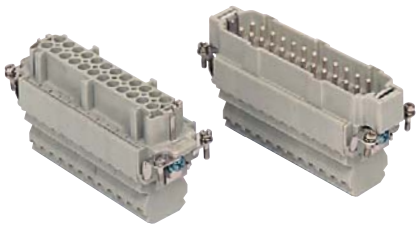

In series CSS inserts **are made available to the user with two spring clamp terminals per contact** so that two conductors can be connected to each of them.

Series CSS inserts share the mating interface (dimensions) with equally sized inserts of series **CNE** (screw-type) **CCE** (crimp type) **CSH** (spring-type with actuator button SQUICH®), **CT** (screw-type with 45° terminal block) and **CTSE** (spring-type with 45° terminal block).

With connectors like **CSS** and suitably developed housings, electric motors can be prepared for the fastest and safest installation. The motor terminal box may be replaced by the specially developed motor connection angled housing **CVI 10 LA** or **MVI 10 LAP32** (see page 450). The “57.27” size for the connector insert and the housing has been chosen to fulfil motor connection requirements.

Star or delta (triangle) bridges may be realized in the mating (free) female connector, realizing simple bridges thanks to the double terminals per pole feature of **CSS,** by short conductors stripped at both ends and “U-bent”. Fast and easy exchange of a motor for maintenance is made easy, reducing costs for downtime.

(*) DESINA standards for **DE**centralized and **S**tandardized **IN**stall**A**tion Technology. This working group was founded by the Association of German Machine Tools Manufacturers (VDW) with the target to develop a field bus independent, standardized installation system for machines and production plants. The task was fulfilled in close cooperation with machine tools manufacturers, the automotive industry and their supply chain. DESINA specifications have been transferred to series **ISO 22570** international standards.

SUM-UP

- **Dual spring terminal per pole**
- **Two spring clamp terminals per contact**
- **No special tools are needed**
- **Suitable for standard hoods/housings size “44.27”, “57.27”, “77.27”, “77.62”, “104.27”, “104.62” high construction versions**
- **Bridges are made by using a simple 0,5x3,5 mm flat screwdriver to open the spring terminals**
- **Vibration and shock resistant**
- **Ideal as motor connectors, as they provide the possibility to connect motor windings in star and delta configuration**
- **The 10 pole version specified by DESINA Specifications* and by ISO 22570-1:2009 as type 1 connector for motor connection (6 poles for three-phase star or delta connection + 2 poles for breaking circuit + 2 poles for temperature sensing motor protection circuit)**
- **Bult-in silver plated contacts**

CSS series

CSS 48 poles connector inserts
Maximum current load derating diagram

Inserts with incorporated terminal block for multipole connectors (10A max versions)

CT series multipole connectors (with incorporated 45° terminal block) are recommended for greater cost-saving and safety for use on machines and command and control panels.

For control panel mounting, bulkhead housings must be used.

CT series inserts (10A max versions) are supplied in the plug or socket versions and must be mounted with insertion from the rear of the enclosure (**Figures 1** and **2**), as the space occupied by the terminal block does not allow for the passage of the insert and insertion from the front of the enclosure.

As an alternative to the traditional terminal blocks, the inserts can be mounted inside the control panels on DIN EN 60715 rails (**Figure 5**) using suitable accessories providing the added advantage of easy sectioning.

The special structure of CT inserts provides all the conductor connections on the same side, achiering easier wiring and a complete view of the work area.

The 45° terminal block has also slots for housing the identification wire markers of each contact.

Wire markers of different manufacturers may be used such as: Cabur, Grafoplast, Modernotecnica, Phoenix Contact, Siemens, Wago, Weidmüller.

CT series is available in the versions “left-hand” and “right-hand” for mounting on the left (**Figure 3**) or on the right (**Figure 4**) of the control panel walls.

This characteristic is determined by the position of contact “1” and the protective earth terminal in the upper part of the insert terminal block for both left and right mounting.

The installation of inserts on DIN rails (**Figure 5**) inside the control panels is usually made to ease the wiring in sectionable parts.

In this case the degree of protection for coupled connectors is IP20 (in accordance with EN 60529).

This type of mounting requires supports (CT APE) suitable for mounting on DIN EN 60715 rail. to be provided to the inserts.

In addition, CRBF (female) and CRBM (male) coupling screws instead of normal screws are recommended for fixing the inserts to the enclosures (**Figure 5**) in order to guarantee a stable and safe coupling between the CT and CTS inserts installed on the DIN rails and corresponding mating CD inserts.

Figures 1 and 2 (rear mounting)
The insert is inserted into the bulkhead housing with pre-wired conductors connected at the opposite end

Connection technology with spring terminal

Inserts with incorporated terminal block for multipole connectors (16A max versions)

45° CT - CTSE series multipole connectors (with incorporated terminal block) are recommended for greater cost-saving and safety for use on machines and command and control panels.

The CT - CTSE series inserts (16A max versions) are supplied in the plug or socket versions and may be mounted with insertion from the front of the enclosure (**Figure 1** for all the polarities of the inserts) or with insertion from the rear of the enclosure (**Figure 2**, only for 16 and 24-pole inserts).

As an alternative to the traditional terminal blocks, the inserts can be mounted inside the control panels on DIN EN rails (**Figure 5**) using suitable accessories providing the added advantage of easy sectioning.

The special structure of the CT - CTSE inserts has all the conductor connections on the same side providing for easier wiring and a complete view of the work area.

The terminal block has also slots for housing the identification wire markers of each contact.

Wire markers of different manufacturers may be used such as: Cabur, Grafoplast, Modernotecnica, Phoenix Contact, Siemens, Wago, Weidmüller.

The CT - CTSE series is available in the versions “left” and “right” for mounting on the left (**Figure 3**) or on the right (**Figure 4**) of the control panel walls.

This characteristic is determined by the position of contact “1” and the ground terminal in the upper part of the insert terminal block for both left and right mounting.

The installation of inserts on DIN rails (**Figure 5**) inside the control panels is usually made to facilitate the wiring into sectionable parts.

In this case the degree of protection for coupled connectors is IP20 (in accordance with EN 60529).

This type of mounting requires supports (CT APE) suitable for mounting on DIN EN 60715 rails.

Furthermore, to ensure a stable and secure mating between the CT and CTSE inserts installed on DIN rails and counterparts CNE, CCE, CSH, CSS mating screws CRBF (female) and CRBM (male) are recommended, to replace the ordinary fastening screws to the enclosures (**Figure 5**).

Figure 1 (front mounting)

The insert is inserted into the bulkhead housing without wired conductors or with pre-wired conductors that are not connected at the opposite end.

Mounting for inserts of 06, 10, 16 and 24 poles

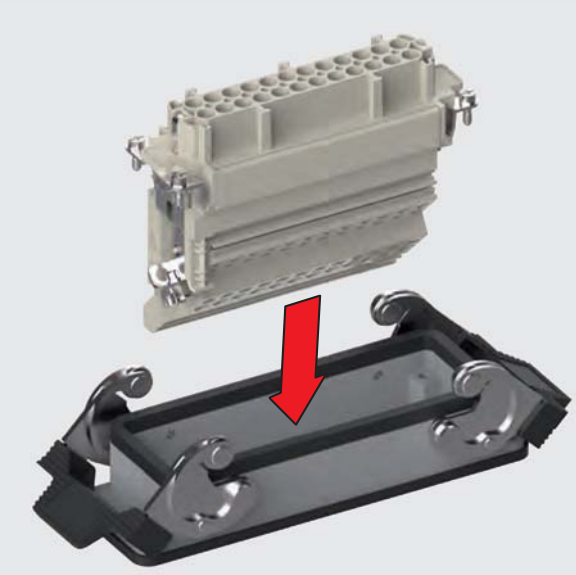

Figure 2 (rear mounting)

CQE series

TECHNICAL FEATURES

CQE connector inserts are disegned for removable crimp contacts series **CC** (solid pin ø 2,5 mm), (including male pins **CC x.x AN** for advanced opening) with rated current up to **16A** per pole, and are the "high density" evolution of historic series **CCE**: in the same housing sizes, the number of pole (contact density) is increased as shown in this table:

Size	series CCE # of poles	series CQE # of poles	density increase
44.27	6 + ⏚	10 + ⏚	1,67
57.27	10 + ⏚	18 + ⏚	1,80
77.27	16 + ⏚	32 + ⏚	2,00
104.27	24 + ⏚	46 + ⏚	1,92
77.62	32 + ⏚ (2x16)	64 + ⏚ (2x32)	2,00
104.62	48 + ⏚ (2x24)	92 + ⏚ (2x46)	1,92

NOTE - The contact density is almost doubled in the same footprint by doubling the number of rows of contacts from 2 to 4. Except for size 77.27, which shows 4 rows of contacts seats equally dimensioned, central rows - due to space costraints to keep the required insulating distances towards the PE lateral contacts - are limited in number to one contact seat less than the peripheral rows.

This allows using the same size of connector housing for wiring almost twice the amount of circuits, or conversely to step down by one size the dimension of the connector housing to wire the same number of circuits, with cost and space efficiency. The only precaution is to suitably select the size of cable entry in case of increase of number of individual wires or diameter of a multi-core cable. Contact retention is operated by the retainers incorporated in the insulating body contact holder. Suitable removal tool **CQES**.

Inserts series		**CQE**
No. of poles [1]	main contacts + ⏚	**10, 18, 32, 46, (64 = 2x32), (92 = 2x46)**

degree of protection	with enclosures	**IP65**, **IP66**/IP69, IP66/**IP67**/IP69, IP66/**IP68**/IP69 (according to type and model)
	without enclosures - termination side on male and female inserts; - mating side on female inserts	**IP20** (IPXXB)
conductor connections		crimp (⏚ only: screw)
conductor cross-sectional area	mm^2	0,14 - 2,5
	AWG	26 - 12
mechanical endurance (mating cycles)		≥ 500

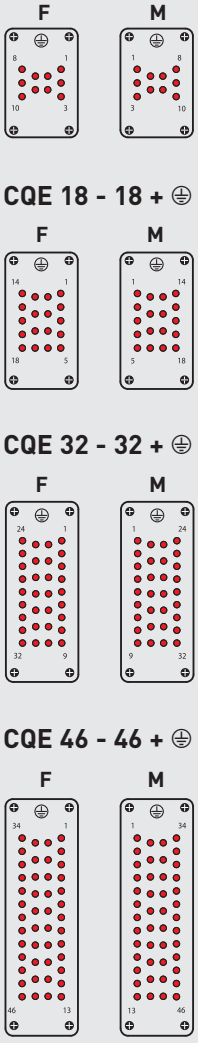

1) Polarities shown in brakets may be obtained by using two inserts in their own double-sized housings
2) Please check the inserts derating diagrams to establish the actual maximum operating current according to the ambient temperature, the conductot cross-sectional area, the polarity of the connector, and any external constraint that may derive e.g. by the continuous operating temperature sustained by the chosen conductor sheathing or by end-product safety standards fixing max allowed temperature rise on terminals (e.g. 30 K, 45 K or 50 K)

When all the contacts are used, CQE connector inserts may be used at rated voltage up to 500V (first column) pollution degree 3, in accordance with the standard EN 61984. If the number of contacts is reduced and the contacts accordingly assigned, these connectors may be used at higher voltages.

This is possible because the decrease in the number of contacts leads to an increase clearences and creepage distances.
When the contacts are arranged as shown below, the inserts may be used at rated voltages of 690V (second column) and 1000V (third column) pollution degree 3, in accordance with the standard EN 61984.

Special voltages for CQE inserts

For use up to 500V pollution degree 3	For use up to 690V pollution degree 3	For use up to 1000V pollution degree 3

CQEE series

TECHNICAL FEATURES

Connector inserts series **CQEE** are the logical extension of the existing series CQE for removable crimp contacts series CC (16A max, available both in gold plated and in silver plated version) that include the CC…AN pin contacts with anticipated opening (first-to-break) and delayed closing (last-to-make).

Compared with the connector inserts of the same size of series CQE, connector inserts series **CQEE** provide a sensibly higher number of contacts: 64P+⏚ instead of 46P+⏚ for size 104.27 (+39%), 40P+⏚ instead of 32P+⏚ for size 77.27 (+25%).

With the same number of circuits, it is conversely possible to reduce the size of the connector inserts and of the related hood and housing, thus reducing the overall cost.

Connector inserts series **CQEE** may replace in the same size (77.27, 104.27) and with the same contact density (40P+⏚ and 64P+⏚) the corresponding inserts of series CD for removable crimp contacts series CD (10A max).

This may be particularly useful when, as a function of the intended use, it is required:

- to use the connector at a higher rated voltage: CQEE covers use at 500V / 6kV / 3 where CD stops at 250V / 4kV /3;
- to assign a larger current-carrying capacity, both due to the lower contact resistance (1 mΩ instead of 3 mΩ) and the larger wire size available for series CC compared with series CD contacts;
- to use wires with the larger cross-sectional area of 4 mm^2 / AWG 12, in order to contain the percent voltage drop [%] in circuits fed with extra-low voltage and with comparatively high currents, or in circuits of considerable length;
- to use crimp contacts with inherently higher mechanical robustness;
- to use anticipated pin contacts CC…AN (e.g. for the remote signal ling of the “OPEN” or “CLOSED” status of the connector).

CQEE series

CQ4 (CQ4F /M 02 – CQ4F /M 02 H – CQ4F /M 03)

Compact size “21.21” for high current or higher voltage

- Compact size **“21.21” 2P+PE** and **3P+PE** connector inserts for **high current** (**40 A**), and either standard voltage up to 400 V or **higher voltage 830 V**, ideally complemented by the expanding range of hoods and housings size “21.21” with **M25** threaded cable entry, either insulating or metallic (**MK, MKA, MGK**), which are particularly suitable for use with high cross-sectional area conductors (large cable diameter).
- Series **CQ4** encompasses the following size “21.21” connector inserts:
  - **CQ4F /M 03** with 3P+PE with up to 40 A current-carrying capacity and standard rated voltage up to 400 V (e.g. for 3-phase motor connections);
  - **CQ4F /M 02** with 2P+PE with up to 40 A current-carrying capacity and standard rated voltage up to 400 V (e.g. for 1-phase AC or for DC power connections), this one with better current-carrying capacity by the derating diagrams, due to a power contact less in the same space;
  - **CQ4F /M 02 H** with 2P+PE with up to 40 A current-carrying capacity and higher rated voltage applications, up to **830 V** (for 1-phase AC or for DC higher power connections).
- Suitable for series **CX** crimp contacts (including the PE pre-leading one), covering stranded copper conductors cross sectional area range **1,5 mm² to 10 mm²** (16 AWG to 8 AWG).
- Protection against direct contact when unmated:
  - **CQ4F 02**: both male and female connector inserts are **fingerproof** (IP2X) even on the mating face when uncoupled (useful e.g. when a male connector is on the motor side of a drive including capacitors, potentially charged for residual time).
  - **CQ4F 03**: the female insert is **fingerproof** (IP2X) even on the mating face when uncoupled, while the male insert **CQ4M 03** in that circumstance is protected from access with the back of the hand (IP1X).
- **CQ4F /M 02** and **CQ4F /M 02 H** specific features:
  - Special **polarisation key** on the connector bodies mating face of both versions, differently oriented, to avoid the mismating of CQ4F /M 02 H **830 V** version with the lower voltage CQ4F /M 02 **400 V** version.
  - **CQ4F /M 02 H** supplied with a **special insulating heat-shrinking tube** that provides the required additional insulation towards a metal housing.
  - **CQ4F /M 02 H** specific **830 V** rated voltage duly marked on the inserts, to avoid any possible confusion with similar CQ4F /M 02 for 400 V.
- Codings:
  - **CQ4 03**: possibility of up to **4 different codings** thanks to the use of the **optional CR Q03 coding pin** (4 possible positions);
  - **CQ4 02** and **CQ4 02 H**: possibility of up to **16 different codings** thanks to the use of **two optional CR Q02 coding pins** (it is possible to install two pins with 4 positions each).

- characteristics according to EN 61984:
  10A 400V 6kV 3
- c UL us (UL for USA and Canada), DNV-GL, BUREAU VERITAS
  EAC certified
- rated voltage according to UL/CSA: 600V
- insulation resistance: ≥ 10 GΩ
- ambient temperature limit: -40 °C ... +125 °C
- made of self-extinguishing thermoplastic resin UL 94V-0
- mechanical life: ≥ 500 cycles
- contact resistance: ≤ 3 mΩ
- inserts already supplied with stainless steel fixing screw with gasket, which ensures IP66/IP67/IP69 degree of protection
- first-make last-break screw-type PE contact
- **it is recommended to crimp the contacts with crimping tools homologated by ILME** (please see the crimping tool section 10A contacts, CDF and CDM series on pages 708 - 741)
- for max. current load see the connector inserts derating diagram below; for more information see page 28

CQ 12 poles + ⏚ series

TECHNICAL FEATURES

Compactness meets performance

Compact solution for high density needs.

Reliable, 16 coding possibilities, perfect for small motors with bridges for star/delta configuration.

Inserts with a retainer device on crimp contacts

CX 6/12 insert has been developed **with a retainer device on crimp contacts.**

This layout enables the wires to be connected to the socket and plug insert removable contacts by crimping them with a crimp tool and its locating turret.

The crimp connection is insured and is **extremely resistant even to the most insidious strains**, such as vibrations.

SUM-UP

- **Crimp connection**
- **Great resistance to strong vibrations**
- **For wires: up to 10 mm² (AWG 8)**
- **Auxiliary crimp contacts: silver or gold plated**

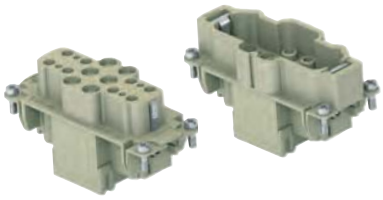

Inserts series		**CX 6/12**	
No. of poles	main contact	6 + ⏚ (40A)	
	auxiliary contacts	12 (10A)	
rated current		40A	10A

The derating curves for the connector's **power** (red) and **signal** (black) portions provided in the diagram are valid for the following combinations of cross-sectional area on the power side and on the signal side:

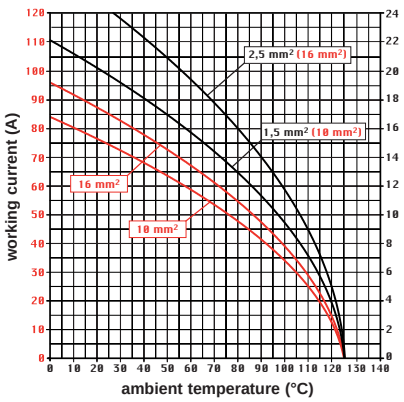

- power 4 mm² with signal 1 mm²;
- power 6 mm² with signal 1 mm²;
- power 10 mm² or 6 mm² with signal 1,5 mm²;
- power 16 mm² with signal 2,5 mm²;

NOTE 1
Any cross-sectional area on the signal side higher than that combined to the relevant cross-sectional area on the power side may be used, but with the derating curve for the cross-sectional area given as combined to that on the power side;

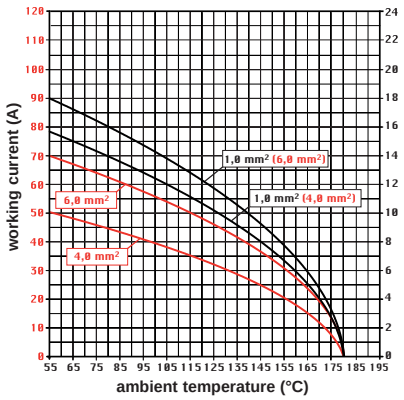

NOTE 2
Any cross-sectional area on the signal side lower that that combined to the relevant cross-sectional area on the power side (e.g. 1 mm² signal with 16 mm² power) may be used at the current indicated for the signal cross-sectional area belonging to the closest lower cross-sectional area on the power side (i.e. the 1 mm² curve combined to the 6 mm² power section)

CX 6/6 inserts 100A/16A version

The CX series of combined "power /auxiliaries" connector inserts has been enhanced with a **new insert, CX 6/6 suitable for currents up to 100A** in the power side and 16A on the auxiliaries side, for crimp contacts series CG (100A max) and series CC (16A max) several benefits over conventional screw or axial screw contacts:

- more **resistant to mechanical stresses** such as vibrations, shock and cable loads;
- more **corrosion resistant** (gas tight);
- **quicker to connect** and ensuring more **consistent results** (regardless of the operators "force");
- the connector is **electrically more efficient** (reduced voltage drop).

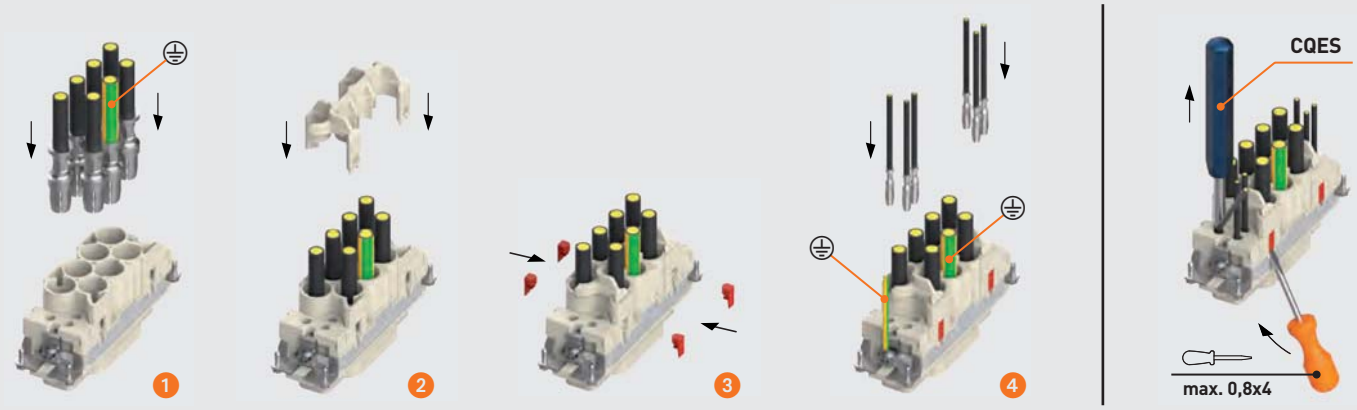

This innovative insert design, by following the same concepts of the MIXO 100A CX..G model, **patented by ILME**, ensures a quicker fitting and removal of crimped contacts.
The **provided locking keys** firmly fasten the contact holder.
The power contacts may be removed **without any special tool**, using a simple screwdriver (e.g.: 0,5 x 3 mm, 0,5 x 3,5 mm, 0,6 x 4 mm and 0,8 x 4 mm flat blade).
The removal of auxiliary contacts series CC requires the CQES extraction tool. See figure below.
The crimping operation may be carried out quickly and efficiently with the **hand operated hydraulic pliers**, which is pre-fitted with the suitable locator. Suitable crimp dies are available on request.

Inserts series		**CX 6/6**		
No. of poles	main contact	6 + ⏚ (100A) **		
	auxiliary contacts	6 (16A)		
rated current [1]		100A	16A

HNM series

TECHNICAL FEATURES

Specifically designed for applications requiring a high number of mating cycles, the **HNM series** guarantees **up to 10.000 matings**.

Ideal for test benches, the special **HNM inserts** guarantee 10.000 matings when used together with the **dedicated enclosure series**, thanks to the special antifriction treatment applied both on the contacts of the inserts and on the V-TYPE locking lever and the riveted pegs.

5.000 matings are achieved when working with standard enclosures.

The series features **special versions of the 10 and 16A gold plated crimp contacts** to be used both with **special crimp inserts** (up to 108 poles) and with standard MIXO inserts mounted in **special frames** equipped with **gold PE contacts**.

SUM-UP

RXF/M 12/2

TECHNICAL FEATURES

Special **HNM** version (**High Number of Matings** up to 10.000 cycles) of CXF/M 12/2 connector inserts, to be used in combination with:

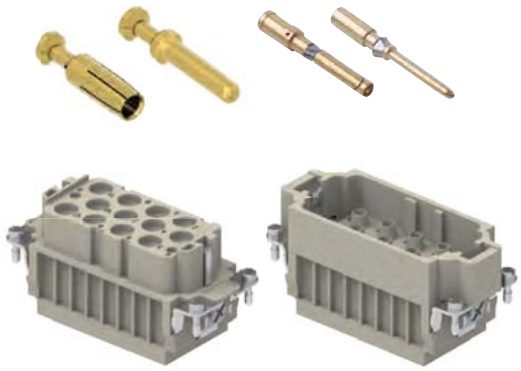

- **up to 12 40A HNM gold plated removable crimp contacts** of the **new RX** series,
- **2 10A HNM gold plated removable crimp contacts** of the **already available RD series;**

- crimp connector inserts with a combination of 12 power contacts (40A) plus 2 auxiliary contacts (10A) + PE;

- suitable for the operation of 4 three-phase AC motors with 2 auxiliary contacts;

- featuring a special antifriction treatment to guarantee up to **10.000 mating cycles**

- **5.000 mating cycles** with standard enclosures, single lever (excluding size “44.27”).

SUM-UP

- **Crimp connection**
- **Great resistance to strong vibrations**
- **For wires: up to 10 mm² (AWG 8)**
- **Auxiliary crimp contacts: silver or gold plated**

RX 12 poles (40A - 690V) + 2 poles (10A - 250V) + ⏚ HNM (High Number of Matings)

enclosures:
size "77.27" **page:**

CJK 8M

TECHNICAL FEATURES

- **CJK 8M** adapter insert size “21.21” for placing an RJ45 plug (male connector) of a pre-assembled patch cord into a **M25** size “21.21” top cable entry hood, either metal or insulating;
- it allows a **truly “universal”** use thanks to the possibility to install virtually any RJ45 patch cord plugs available on the market (of any Category: Cat. 5, 5e, 6, 6_A, 7, or 8) inside the growing range of size “21.21” top entry hoods with glued gasket, **without any disassembly of the patch cord.** A straighforward smart solution, all the more so if compared with more complex and expensive solutions;
- the **proprietary ILME design** of this adapter foresees a **two-part insulating carrier** (the first part acting as **carrier,** the second as **latch**) that can quickly and easily make captive the RJ45 plug (male connector), the assembly is then introduced in the relevant “21.21” M25 top entry hood and fastened to it by the usual screw;
- **a metallic** (nickel plated brass) **or insulating** (light grey or black colour) **M25 cable gland** with suitable internal diameter to let the patch cord RJ45 plug pass-through **is separately available;**
- the **special sealing gasket,** provided with the RJ45 adapter **CJK 8M, is longitudinally cut** on its flank and must be applied over the cable to increase its diameter in the portion to introduce in the cable gland sealing, according to instructions;

- suitable for the combination of an RJ45 patch cord with one or both RJ45 plug extremities mounted inside suitable size “21.21” *insulating* or *metal* M25 top entry hood with glued gasket, with an RJ45 jack counterpart (female connector), e.g. a **CJ KF** adapter combined with the relevant female/female RJ45 connector **CX 8 JF** or **CX 8/2 JF** (4-way version **CX 4 JF** or 4/2-way version **CX 4/2 JF** are available upon request), mounted inside a corresponding counterpart hood or housing with locking lever size “21.21”;
- optional four coding positions with **CR KC** insert coding pin (4 pins required for each connector coupling).

CLK 04 SC adapters
TECHNICAL FEATURES

The new adapter CLK 04 SC enables use of fibre optic SC contacts, up to 4 SC contacts per connector, for indoor or outdoor heavy duty industrial applications, with ILME connector enclosures size “21.21” series CKA (IP66/IP67/IP69, metallic, both C-TYPE, grey-painted, for normal environments, and W-TYPE black-painted, for aggressive environments, only the hood models provided with sealing gasket), series CGK/MGK (IP66/IP68/IP69, metallic, either Pg or metric-threaded cable outlet) and series CK (IP66/IP67/IP69, insulating, only the hood models provided with sealing gasket).

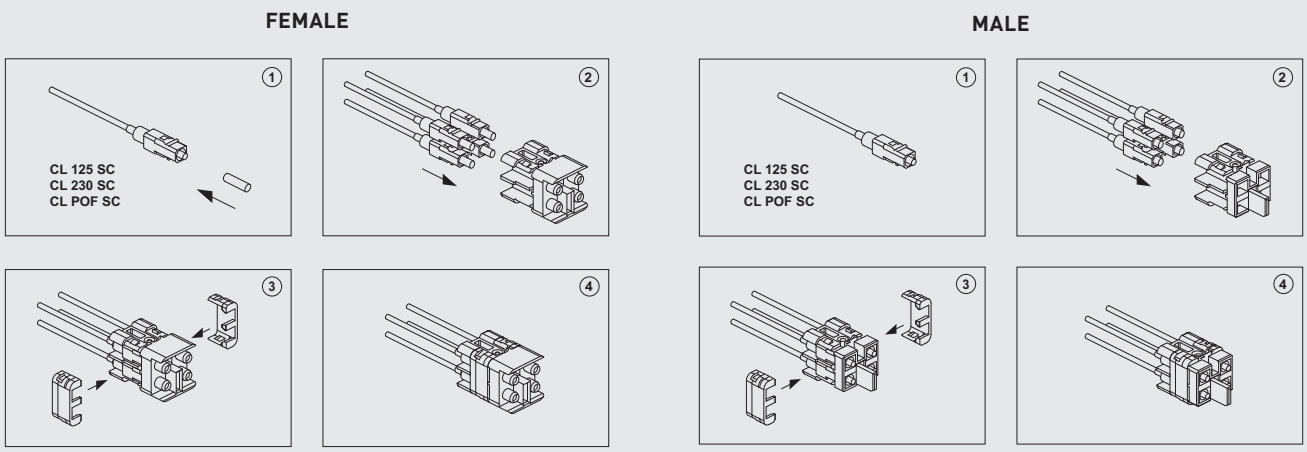

The fibre optic SC contacts (genderless, to be purchased separately) are available both for multi-mode fibres (50/125 µm or 62,5/125 µm) and single-mode fibre (9/125 µm).
The fibre optic SC contacts are also available for the hard-clad silica (HCS) or polymer-clad fibre (PCF) 200/230 µm fibre optic cables and for the less demanding, with shorter transmission distance covered, but more cost effective POF Ø 1 mm applications, available with crimp technique version (crimping tool required).

NOTE
Due to the higher skill and training required to produce an effectively performing fibre optic junction for a single-mode type fibre-optic cable than for a multi-mode one, dedicated contacts for single-mode are available only upon request. Contact our Commercial Department for a quotation. It is more practical in such case to equip the CLK 04 SC adaptor with ready-to-use fibre optic patch cords.
Quick assembly technique version (tool-less) for POF Ø 1 mm cables are also available only upon request, please send inquiry to our Commercial Department.

The female adapter inserts are provided with 4 ceramic (zirconia) type split alignment sleeves, for minimal insertion loss (e.g. critical network connections) and best suitable for single-mode F/O cable connections. As optional accessory, metallic (phosphor bronze) split alignment sleeves are also available for more durable (less prone to cracking) applications, but less demanding precision alignment, thus most suitable for multi-mode fibre applications.

Part No. of adapter	CLK 04 SC
No. of seats/poles for optical contacts	4
Ambient temperature limit (°C)	min -40 / max +70

CX BD adapter insert

TECHNICAL FEATURES

To be able to use circular shielded connectors series **MIXO BUS** (multiaxial, for balanced cables with multiple pairs) or coaxial connectors (for coaxial cables) even in compact enclosures size “21.21” **CK/MK**, **CKA/MKA** or **CGK/MGK**, it is necessary to purchase the adapter insert **CX 1/2 BD**. This insert can be used to assemble MIXO coaxial connectors part No. **CX 01 BM/BF** for coaxial cables with a characteristic impedance of 75 Ω and **CX 01 BCM/BCF** for coaxial cables with a characteristic impedance of 50 Ω, or MIXO BUS **CX 04 BM/BF** multiaxial shielded connectors with 4 poles + shield and the new **CX 08 BM/BF** shielded connectors with 8 poles + shield, in addition to providing seats for 2 additional optional contacts series CD for the connection of a SELV (safety extra-low voltage) supply line.

The connector portion of this adaptor has rated values compliant with standard EN 61984 and equivalent to 10A 50V 0,8kV 3.

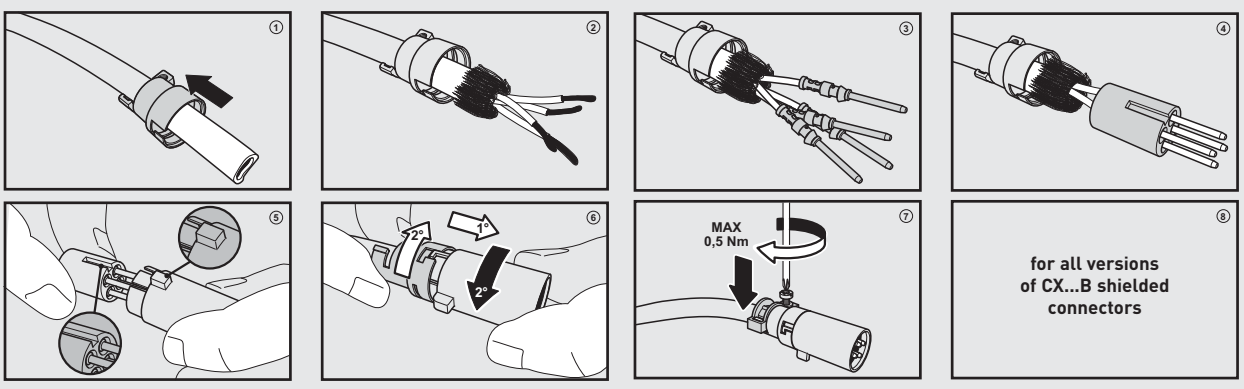

Adaptor insert **CX 1/2 BDM/BDF** is fitted with multiaxial and coaxial MIXO BUS shielded connectors and is designed to be used only with the models specified below of the following enclosures: **CK/MK** or **CKA/MKA** (IP66/IP67/IP69) or **CGK/MGK** (IP66/IP68/IP69) with glued gasket on hoods and covers. The cable shielding is electrically separated from the earthing connection of the metal enclosure. If used with MIXO BUS **CX 04 BM/BF** shielded connectors, the connector is able to support all field bus protocols with 4 conductors.

Part No. of adapter		**CX 1/2 BD**
No. of seats/poles	seats for shielded connector [1]	1
	seats for auxiliary contacts	2
Rated current [2]	shielded connector	depending on type: 5A, 10A, 16A
	auxiliary contacts	10A
EN 61984	rated voltage	50V
	rated impulse withstand voltage	0,8kV
	pollution degree	3
UL 1977 / CSA C22.2 - N°187.3	rated voltage (a.c./d.c.)	50V
Contact resistance	shielded connector	depending on the type of contact used
	auxiliary contacts	≤ 3 mΩ
Insulation resistance		≥ 10 GΩ
Ambient temperature limit (°C)	min	-40
	max	+70
Degree of protection	with enclosures (according to type)	IP66/IP67/IP69, IP66/IP68/IP69
	without enclosures	IP20
Conductor connections		crimp
Conductor section	shielded connector (mm^2/AWG)	depending on the type of contact used
	auxiliary contacts (mm^2)	0,14÷2,5
	auxiliary contacts (AWG)	26÷14
Conductors stripping lenght		depending on contact
Mechanical endurance (mating cycles)		≥ 500
Self-extinguishing capacity UL 94		V0

[1] Depending on the selected shielded connector, which must be ordered separately, the number of poles + shield could be 1 (coaxial connectors), 4 (4-way multiaxial connector for 2 pairs) or 8 (8-way multiple connector, for example for 4 pairs).

[2] It is generally necessary to refer to the loading curves of the inserts to determine the actual operating current limit for a specific ambient temperature. These curves are not required for MIXO BUS / coaxial shielded connectors, because these are signal connectors designed to be used by the transmission protocols to transmit currents in fractions of amperes. The current capacity specified is the maximum current traditionally assigned to contacts, not the one assigned to the shielded connector when in use.

TECHNICAL FEATURES

DESINA® (which stands for **DE**centralised and **S**tandardised **IN**stAllation technology) is an innovative installation concept behind a study headed by the German manufacturers of machine tools association (VDW), with the co-operation of users (including German automotive manufacturers) and component manufacturers, which has led to the introduction of a specification aimed to standardise electrical, hydraulic and pneumatic components and their interconnection on common platform for CNC controlled machine tools and manufacturing lines.

In the last few years, the DESINA® specification has been successfully endorsed by the ISO TC 184/SC 1 "Industrial automation systems and integration / Physical device control" as an ISO standard.

This work has been completed, and the following standards have become available:

ISO 23570-1 Industrial automation systems and integration – Distributed installation in industrial applications:
Part 1 – Sensors and actuators.

ISO 23570-2 Industrial automation systems and integration – Distributed installation in industrial applications:
Part 2 – Hybrid communication bus.

ISO 23570-3 Industrial automation systems and integration – Distributed installation in industrial applications:
Part 3 – Power distribution bus.

Normally, production systems are controlled by various field buses available on the market such as PROFIBUS, CAN, INTERBUS, etc. DESINA® decentralised approach and interface and connector standardisation, which allows a single distributed control system to be independent from the bus communication protocol selected by the final user, ensure lower installation costs.

The availability of diagnostic capabilities in all the system components ensures a speedier diagnosis in the event of faults and an easier and quicker reset operation, which may be carried out by less specialised staff. DESINA® connection topology requires a **control bus** and a **power bus.**

The hybrid (optical/electrical) control bus provides a serial connection for the devices by using a cable consisting of two fibre optics and four power lines. The devices are fitted with 2 hybrid connectors (and matching flush mounted enclosures) for bus entry and exit.

The hybrid connectors include an interface circuit which turns the TX electrical signal to optical signal with TTL levels and the RX signal from optical to electrical signal with TTL levels.

In other words, **the interface is independent from the selected field bus protocol,** and simply converts the electrical signals into optical signals and vice versa; by doing so, the physical connection between the devices can be used for different bus protocols and can reach a 50 m range by using POF plastic fibres or 300 m by using HCS® fibreglass (Hard Clad Silica – Spectran Corporation registered trademark). The highest baud rate is 12 Mbit/s, compatible with the most advanced field buses.

ISO 23570-3 standard and DESINA® specification compliant

Another variant is also available, which is based on transmitting data on a pair of screened copper cables (instead of fibre optics); in this case, however, the system can only be used for PROFIBUS or CAN buses with RS 485 TX signals.

In both cases, the connector is fitted with housings for 5, 10A auxiliary contacts (**CD** series crimp contacts), which allow all connected devices to receive a permanent direct voltage of 24V (to supply circuits) and a 24V non permanent power supply (only used to open the contactors after operating an emergency switch or a safety switch), as well as a contact available for an optional earth.

The power bus provides a serial connection for drives, controls and power supplies and, more specifically, is suitable to supply power to motors and to their control units.

The standard connector to control motors is the **CQM/F 08** which, with 8 poles + ⏚ 16A 500V, and **CC** series crimp contacts, not only provides a power connection, but also connects the motor brake and safety thermistor.

Another variant is available in the same sizes as the enclosure: **CQM/F 04/2** featuring 4 poles + ⏚ 40A 400/690V and 2, 10A 250V auxiliaries.

For the motor side connection, the connector **CNEM/F 10** (10P + ⏚ 16A 500V 6kV 3, with screw terminals) should be used; with the option to make a star or a delta connection on the connector, the **CSSM/F 10** connector (10P + ⏚ 16A 500V 6kV 3, with spring terminals, two per pole) should be used.

ILME connectors are manufactured to DESINA® specifications and in compliance with ISO 23570-2 and 23570-3 standards.

Hybrid socket and plug connectors for field buses compliant with DESINA® specifications and with ISO 23570-2 standard

	electrical auxiliary female contacts	**electrical auxiliary male contacts**
The hybrid connectors for field buses are listed below:		
- optical field bus **plug**	**CXL 2/4 PF** (for plastic fibre optics POF)	**CXL 2/4 PM** (for plastic fibre optics POF)
	CXL 2/4 PFH (for glass fibre optics HCS®)	**CXL 2/4 PMH** (for glass fibre optics HCS®)
- optical field bus **socket**	**CXL 2/4 SF**	**CXL 2/4 SM**

The hybrid inserts for **socket** type optical field buses can only be fitted inside **fixed enclosures**.
The **plug** types, on the other hand, can only be fitted inside **free enclosures (hoods)**.

The enclosures and matching accessories available are listed below:

Construction details	Material: **PLASTIC**	Material: **METAL**
- fixed, flush mounted enclosure:	**CK 03 IN**	**CKAX 03 I**
- free enclosures (hoods), top entry:	**CKG 03 VN** (Pg 11)	**CKAG 03 V** (Pg 11)
	MKG VN20 (M 20)	**MKAG V20** (M 20)
- free enclosures (hoods), side entry:	**CKG 03 VAN** (Pg 11)	**CKAG 03 VA** (Pg 11)
	MKG VAN20 (M 20)	**MKAG VA20** (M 20)
- cover:	**CKG 03 CN**	**CKAG 03 C**

The portable enclosures and the covers are fitted with an additional seal in order to achieve the versatile **IP65/IP67** degree of protection according to IEC/EN 60529. With these accessories the enclosures also achieve the **IP69** degree of protection (tightness to high pressure and temperature water jets) according to the same standard. The full versatile degree of protection becomes therefore **IP65/IP67/IP69**. The **IPX9** test is identical with that of former German standard DIN 40050-9 (IP69K) currently specified by **ISO 20653** for use on board road vehicles.

Specifications

Interface

Hybrid electrical-optical connector insert consisting of 2 connectors for fibre optics and 4 contacts for electrical wires; an interface circuit built into the optical socket converts the electrical signals into optical signals and vice versa.

Optical parts

transmitter (T):	Agilent (HP) Versatile Link HFBR-1525, or equivalent
receiver (R):	Agilent (HP) Versatile Link HFBR-2525, or equivalent
male optical contact:	Agilent (HP) Versatile Link HFBR-4531, or equivalent, Simplex snap-in type (without crimping) for POF plastic fibre optics; HFBR-4521, or equivalent, crimp contact, for HCS® glass fibre optics
note:	POF is a plastic fibre optic with a 1000 µm diameter for red light and wavelength = 660 nm. HCS® is a Hard Clad Silica glass fibre optic with a 200 µm diameter for red light with wavelength = 660 nm.
Optical parts:	laser class I
Electrical contacts	4 maximum current 10A, gold or silver plated brass crimp contacts, cable section 0,14...2,5 mm² (CD series); live wire end female. Nominal voltage 24V. Electrical data in compliance with EN 61984: **10A 25V 0,8kV 3**
Degrees of protection:	IP65/IP67/IP69 according to EN 60529 (if a cable clamp with IP67/IP69 rating is used).
Temperature range:	-40 °C / +70 °C

Data transmission/reception rate (Data rate): up to 12 Mbit/s

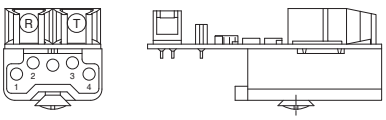

Designation of auxiliary electrical contacts

Designation of auxiliary electrical contacts (male and female) in the hybrid socket connector with optical TX system:

Socket connector with male auxiliary electrical contacts CXL 2/4 SM

Pos.	Function
1:	+ 24V not switched
2:	0V (reference for contact 1)
3:	0V (reference for contact 4)
4:	+ 24V switched

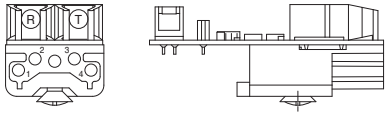

optical →
electrical →

Socket connector with female auxiliary electrical contacts CXL 2/4 SF

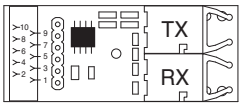

Pos.	Function
1:	+ 24V not switched
2:	0V (reference for contact 1)
3:	0V (reference for contact 4)
4:	+ 24V switched

optical →
electrical →

Insulation displacement connector (IDC) for ribbon flat cable on printed circuit

Pos.	Function	Pos.	Function
1:	earth	6:	TXD
2:	RXD	7:	earth
3:	RXD	8:	+5V DC
4:	earth	9:	+5V DC
5:	TXD	10:	earth

The contacts in the hybrid socket connector are numbered in a clockwise direction.
With reference to this, the contacts in the field bus hybrid plug connector are numbered anticlockwise.
"R" Data reception (beam exit) - "T" Data transmission (beam entry).

Socket and plug connectors for power buses compliant with DESINA® specifications and with ISO 23570-3 standard

The connector inserts on the power bus for a motor controller are as follows:
- **CQM 08** plug
- **CQF 08** socket

The connector inserts for the motor controller may be fitted inside the following enclosures:

Construction details
Material: **PLASTIC**

- bulkhead mounting, straight, fixed enclosure:	**CQ 08 I**
- bulkhead mounting, angled, fixed enclosure:	**CQ 08 IA**
- bulkhead mounting, angled, fixed enclosure, rear entry:	**CQ 08 IAP**
- free enclosure (hood), top entry:	**CQ 08 V**
- free enclosure (hood), side entry:	**CQ 08 VA**
- free enclosure (hood), top entry and lever:	**CQ 08 VG**
- free enclosure (hood), side and top entry:	**MQ 08 V0225**
- socket cover:	**CQ 08 C**
- plug cover:	**CQ 08 CA**

The **CQ/MQ 08** enclosures and covers once complete and fitted with suitably rated cable gland or conduit fitting ensure the versatile **IP65/IP67** degree of protection according to IEC/EN 60529. With these accessories the enclosures also achieve the **IP69** degree of protection (tightness to high pressure and temperature water jets) according to the same standard. The full versatile degree of protection becomes therefore **IP65/IP67/IP69**. The **IPX9** test is identical with that of former German standard DIN 40050-9 currently specified by **ISO 20653** for use on board road vehicles.

Specifications

Connection: **9 contacts (8 + ⏚)**
The male connectors (plugs) are used for termination of connecting cables; the female connectors (sockets) are fitted on the motor controller

Electrical contacts: 9 maximum current 10A, gold or silver plated crimp contacts, cable section 0,5...2,5 mm² (20 AWG -14 AWG) CC series

Degrees of protection: IP65/IP67/IP69 according to EN 60529 (if a cable clamp with IP67/IP69 rating is used)

Temperature range: 40 °C / +125 °C

Electrical data: compliant with EN 61984: **16A 500V 6kV 3**

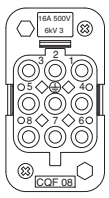

Self extinguishing properties: 94V-0 compliant with UL 94 standard; glow-wire 960 °C compliant with IEC/EN 60695-2-11 standard

Designation of contacts

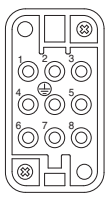

The designation of contacts for motor controller outlet is as follows:

contact	designation
1	line L1
2	
3	line L3
4	brake (0 V)
5	temperature sensor
6	brake (+24V c.c.)
7	line L2

PE	protective earth

F

M

The connector inserts on the power bus for a motor controller are as follows:
- **CQM 04/2** plug
- **CQF 04/2** socket

These connector inserts can be fitted inside the following enclosures:

Construction details
Material: **PLASTIC**

- bulkhead mounting, straight, fixed enclosure:	**CQ 08 I**
- bulkhead mounting, angled, fixed enclosure:	**CQ 08 IA**
- bulkhead mounting, angled, fixed enclosure, rear entry:	**CQ 08 IAP**
- free enclosure (hood), top entry:	**CQ 08 V**
- free enclosure (hood), side entry:	**CQ 08 VA**
- free enclosure (hood), top entry and lever:	**CQ 08 VG**
- free enclosure (hood), side and top entry:	**MQ 08 V0225**
- socket cover:	**CQ 08 C**
- plug cover:	**CQ 08 CA**

The **CQ/MQ 08** enclosures and covers once complete and fitted with suitably rated cable gland or conduit fitting ensure the versatile **IP65/IP67** degree of protection according to IEC/EN 60529. With these accessories the enclosures also achieve the **IP69** degree of protection (tightness to high pressure and temperature water jets) according to the same standard. The full versatile degree of protection becomes therefore **IP65/IP67/IP69**. The **IPX9** test is identical with that of former German standard DIN 40050-9 (IP69K) currently specified by **ISO 20653** for use on board road vehicles.

Specifications

Connection: **5 (4 + ⏚) power contacts + 2 auxiliary contacts**
The male connectors (plugs) are used for termination of connecting cables; the female connectors (sockets) are fitted on the motor controller

Electrical contacts: 5 maximum current 40A (3P+N+⏚) gold or silver plated crimp contacts, cable section 1,5...6 mm² (16 AWG -10 AWG) CX series; 2 maximum current 10A, gold or silver plated crimp contacts, cable section 0,14...2,5 mm² (26 AWG -14 AWG) CD series

Degrees of protection: IP65/IP67/IP69 according to EN 60529 (if a cable clamp with IP67/IP69 rating is used)

Temperature range: -40 °C / +125 °C

Electrical data: compliant with EN 61984: **40A 400/690V 6kV 3**

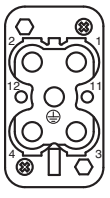

Self extinguishing properties: 94V-0 compliant with UL 94 standard glow-wire 960 °C compliant with IEC/EN 60695-2-11 standard

Designation of contacts

MIXO SERIES

GENERAL OVERVIEW

The MIXO series is a system of modular units for special applications that uses the traditional ILME enclosures. Each enclosure can house different types of connections such as: electric signals and contacts for the conduction of compressed air with pressure values of up to 8 bars.

The inserts are arranged side by side to form a single **compact block** which is inserted into metallic frames with mandatory housings. Once the modules have been inserted and locked with the special tabs, the connector can be placed into the enclosure.

The modular system makes it easy to access a series of contacts inserted in the frame (e.g., for substitution, check or the addition of signals with new inserts for needs not foreseen during the initial installation) without having to disassemble the entire connector.

ILME MIXO series of modular connectors is an open connector system that provides versatile configuration to the users' individual requirements, giving the **freedom to assemble a customized connector** from a range of over 40 modules for power electrical, data transmission, optical signals or air. The module range is continuously expanded, allowing new configurations to be realised.

The use of enclosures provides the possibility of innumerable **applications.**

POWER/ SIGNAL

POWER

DATA TRANSMISSION

FIBRE OPTIC

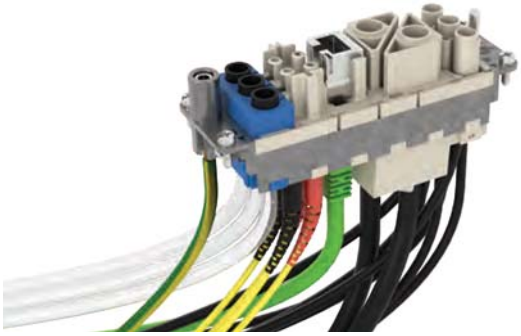

PNEUMATIC

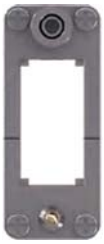

The MIXO series can be used with **5 different frame sizes:**

Frames	one or two-lever metallic enclosures
CX 01 T	size “49.16”
CX 02 TM/TF	size “44.27”
CX 03 TM/TF	size “57.27”
CX 04 TM/TF	size “77.27”
CX 06 TM/TF	size “104.27”
CX 04 TM/TF (x 2)	size “77.62”
CX 06 TM/TF (x 2)	size “104.62”

CX 01 T
1 module

CX 02 TF/TM
2 modules

CX 03 TF/TM
3 modules

CX 04 TF/TM
4 modules

CX 06 TF/TM
6 modules

Possibility – to be verified case-by-case – to use the recently added MIXO **HNM frames** (provided with special gold plated PE contacts) together with R series of crimp contacts and the relevant connector hoods and housings, to produce, where required, an **HNM connector** (High Number of Matings, up to 10.000 cycles of operation). For more information refer to page 333

Fill the unused frame slots with CX FM dummy module

In addition, the MIXO series can be used with the **COB series panel supports.**

Frames	COB panel supports part No.	
CX 02 TM/TF	fixed:	**COB 06 BC** and **COB TCQ**
	mobile:	**COB TSF, COB TSFS** and **COB 06 CMS**
CX 03 TM/TF	fixed:	**COB 10 BC** and **COB TCQ**
	mobile:	**COB TSF, COB TSFS** and **COB 10 CMS**

Frames	COB panel supports part No.	
CX 04 TM/TF	fixed:	**COB 16 BC** and **COB TCQ**
	mobile:	**COB TSF, COB TSFS** and **COB 16 CMS**
CX 06 TM/TF	fixed:	**COB 24 BC** and **COB TCQ**
	mobile:	**COB TSF, COB TSFS** and **COB 24 CMS**

THE 41-VARIANT RANGE OF CHOICE

ILME MIXO portfolio includes a series of key modular units being continuously widened:

23 modules		**for electric power and signal transmission** with contacts for rated current up to:
- 2 module	for 200A	with CX 01 YF/YM and CX 01 YPEF/YPEM (for PE connection) (crimp)
- 2 modules	for 100A	with CX 02 GF/GM and CX 01 GF/GM (crimp)
- 1 module	for 70A	with CX 02 7F/7M (crimp)
- 7 modules	for 40A	with CX 02 4F/4M (crimp), CX 02 4AF/4AM and CX 02 4BF/4BM (axial screw), with CX 03 4F/4M and CX 03 4BF/4BM (crimp), CX 3/4 XDF/XDM (crimp), CX 04 XF/XM (crimp)
- 6 modules	for 16A	with CX 05 SF/SM ▲ (spring clamp), CX 05 SHF/SHM (SQUICH®), CX 06P CF/CM, CX 06 CF/CM, CX 08 CF/CM, CX 20 CF/CM
- 3 modules	for 10A	with CX 12 DF/DM (crimp), CX 17 DF/DM (crimp), CX 42 DF/DM (crimp)
- 2 modules	for 4A	with CX 25 IF/IM ▲ and CX 25 IBF/IBM (crimp)
2 modules		**for high voltage connections** 16A – 2,9/5,0 kV with CX 02 HF/HM and 2,5 kV with CX 02 CHF/ CHM
4 MIXO-BUS		**shielded connectors for bus data transmission:**
- 1 module CX 02 BF/BM		for two shielded connectors to be chosen among the following 4 options:
1. CX 01 BF/BM		coaxial, 10A (crimp) – 75 Ω characteristic impedance
2. CX 01 BCF/BCM		coaxial, 16A (crimp) – 50 Ω characteristic impedance
3. CX 04 BF/BM		quad-axial 10A (crimp)
4. CX 08 BF/BM		8-ways 5A (crimp)
3 modules/adapters		**for RJ-45:**
- CX 01 J8F/J8M/J8IM		single-sized module for 1 RJ-45 patch cord, female module is a "gender changer"
- CX 01 JF/JM		double-sized module for 1 RJ-45 patch cord + 4 auxiliary 10A (crimp) contacts
- CX 02 JF/JM		triple-sized module for 2 RJ-45 patch cords + 8 auxiliary 10A (crimp) contacts
1 module		**for Gigabit Ethernet,** with CX 08 I6F/ I6M, 5A (crimp) and relevant accessories
1 module/adapter		**for USB:** male adapter for USB patch cord; female adapter is a F/F "gender changer", for rear connection to a male USB patch cord with CX 01 UF/UM
2 modules		**with D-Sub 9-pole** with CX 01 9VF/9VM, 5A (crimp) and CX 01 9VTF (for RS-485 T-connection)
2 modules		**for pneumatic quick-couplings** with CX 02 P and CX 03 P
3 modules		**for fibre optic** (POF or MOST® or SC) or coaxial crimp contacts (50 Ω or 75 Ω characteristic impedance) with CX 04 LF/LM, CX 04 RF/RM and CX 04 SCF/SCM

In addition to:

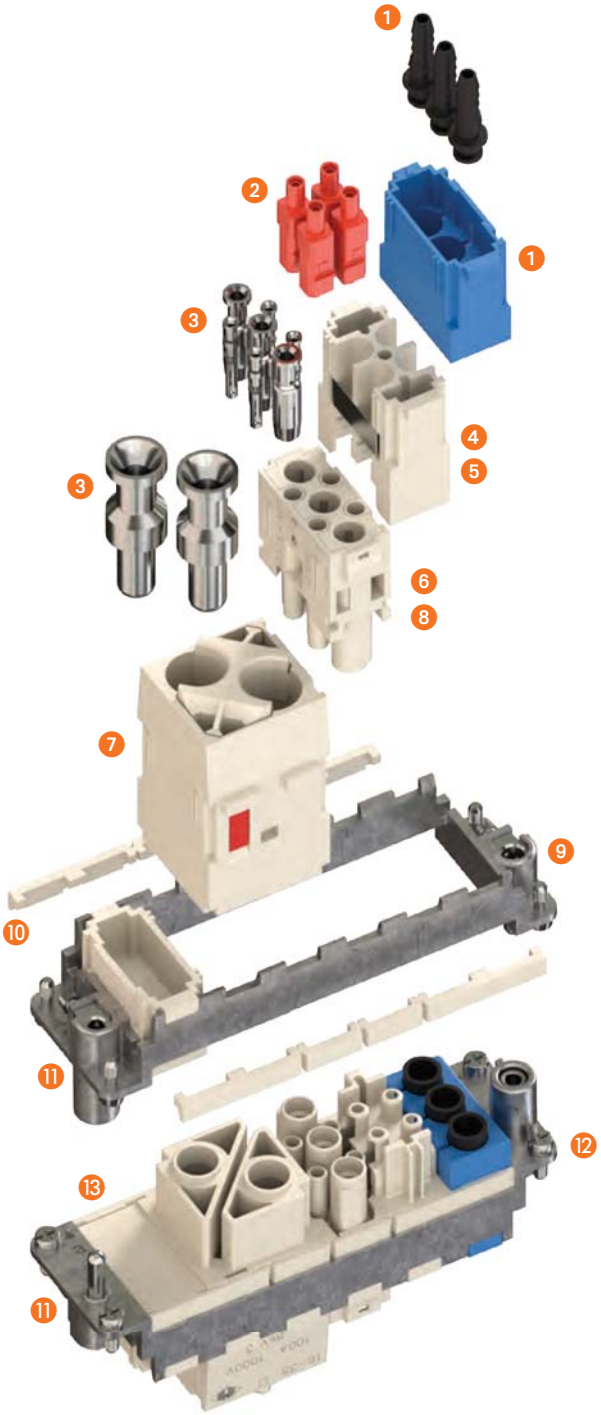

5 frames	for the build-up of a modular connector. The connector consists of a multiple number of the above listed single-sized and/or double-sized modular units and/or triple-sized modules; 4 +1 frames in particular fit the main housing sizes: - **"44.27"** for 2 single-sized modules or 1 double-sized module; - **"57.27"** for 3 single-sized modules or a combination of 1 single-sized module or 1 double-sized module, or 1 triple-sized module; - **"77.27"** for 4 single-sized modules, 2 double-sized modules, 1 triple-sized module and 1 single-sized module, or a combination of 2 single-sized modules or 1 double-sized module; - **"104.27"** for 6 single-sized modules, 4 single-sized modules and 1 double-sized module, 2 single-sized modules and 2 double-sized modules,3 double-sized modules, 2 triple-sized modules, 1 triple-sized module and 1 double-sized module and 1 single-sized module, or 1 triple-sized module and 3 single-sized modules.
1 frame	for the build-up of 1 single-sized module in connector housings size "49.16".

The frame range allows the build-up of 7 different sizes of multipole modular connectors (this because 2 frames each of sizes "77.27" and "104.27" may be additionally combined in the double-sized "77.62" and "104.62" connector housings).

8kV 3
100A 1000V
16–35

TECHNICAL CHARACTERISTICS

1. Pneumatic contacts in plastic with hose barb connection.
2. Fibre optic contacts SC type.
3. Electric contacts in silver-plated or gold-plated brass with connections to the conductors via crimping, spring clamp or axial screw.
4. Modular inserts of identical size with insertion system for forming the complete module and frame lock tab.
5. Inserts in self-extinguishing thermoplastic material, reinforced with glass fibre, UL 94V-0 approved, with a working temperature range of -40 °C to +125 °C.
6. Inserts in conformance with the requirements of the EN 61984 standard and certified and marked with the UL, CSA, CQC, DNV-GL, BV, EAC marks.
7. Inserts with patented “swallowtails” to prevent incorrect coupling.
8. Position of contacts identified with numbers or codes on both sides of every insert.
9. Male/female module carrier frames with mandatory housings and polarity, in die-cast zinc alloy.
10. Module lock tab, may be divided according to the number of modules used; it guarantees a perfect stability of the modules during wiring and coupling/uncoupling of the connectors.
11. Asymmetric protective earth contacts (two per frame) with wide contact surface to prevent incorrect coupling; when two or more identical connectors of the MIXO series are used, coded pins may prevent incorrect coupling (refer to pages 684, 685 and 689).
12. Captive frame fastening screws, with spring washer.
13. Dummy module for unused frame slots.

ADVANTAGES

- **Easy and user-friendly assembly of the complete multi-module insert before fixing it on the relevant sized metal frame;**
- **use of proprietary ILME technology providing each module with “swallowtails” (lateral keys/keyways), for reciprocal locking of modules and overall assembly of the insert into rigid (non hinged) frames with snap-in locking strips;**
- **faster and easier assembly compared with competitor solutions (easier handling of modules as a complete block than e.g. 6 independent parts);**
- **intermateability at “complete connector” (modules in frame) with other industry standard products;**
- **robust and long lasting prevailing crimp connection technology (largely preferred over screw type technology in high vibration and shock environments).**

CX 05 SHF/SHM

MIXO - SQUICH®

SQUICH® technology has now been applied to the ILME MIXO series of modular connectors. Main aim is to make wiring an installation easier and safer on every possible connector.

On this purpose, the new MIXO SQUICH® 5 poles is the improved version of the CX 05 SF/SM spring clamp module:

- **consistently reduced wiring time,** as the actuator buttons are supplied lifted, in “open terminal” position, so that the stripped wires can be directly inserted;
- **operator skill independence:** thanks to the SQUICH® proprietary technology a simple pressure on the top of the actuator button triggers the locking of the conductor in the terminal, avoiding the need of a specific screwdriver and the relevant skill in its correct choice and application;
- **great resistance to strong vibrations** inherent to self-compensating spring-clamp technology;
- **no special wire preparation** (only stripping at the correct length);
- it allows the **use of both rigid and flexible** copper conductors, with a range of cross-sectional area between 0,14 mm^2 and 2,5 mm^2 (26 AWG to 14 AWG);
- for conductors prepared with **crimped ferrules,** the maximum cross-sectional area is 1,5 mm^2;
- possibility to insert the **test probe** of a measurement instrument in the dedicated cavity on the actuator button (proprietary design);
- **silver plated** contacts;
- simple re-opening of a terminal (if needed) using a 0,5 x 3 mm flat blade screwdriver on the actuator button dedicated side window (on terminal #3 use the same screwdriver under any of the two lateral projections of the actuator button head; after removing the wire from the relevant terminal #1 or #4).

SQUICH®-spring connection technology

WIRING

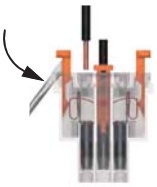

1 

Deeply insert a stripped conductor into a round seat.

2 

Push the actuator button to close the terminal.

RE-OPENING

3 

SIDE (#1 – #2 – #4 – #5)

Insert a **0,5 x 3 mm** flat blade screwdriver in the actuator button side window and pull it up by levering down.

4 Ⓐ 

CENTRE (#3)

Free and re-close (per 3 above) terminal #1 or #4.

4 Ⓑ 

Insert the screwdriver under the projection of actuator button head #3 and pull it up by levering down.

dimensions shown in mm are not binding and may be changed without notice

MIXO DATA

dimensions shown in mm are not binding and may be changed without notice

for 4 POF or MOST® [3] contacts (DIN 41626-3)

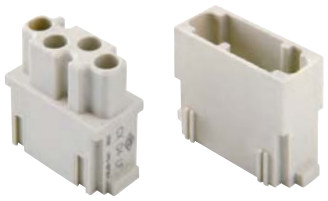

The modular inserts must be installed in suitable frames which are then mounted in traditional enclosures or in COB panel support.
Single-sized modular units may be directly mounted inside MIXO ONE enclosures.

page:

frames for modular units **316 - 317**

MIXO ONE enclosures **369**

modular units, crimp connections

POF / MOST crimp contacts

description	part No.	part No.
without contacts (to be ordered separately)		
female inserts for female contacts [1]	**CX 04 LF**	
male inserts for male contacts [1]	**CX 04 LM**	
female contacts POF [2] 1,0 mm		**CX PLF**
male contacts POF [2] 1,0 mm		**CX PLM**
female contacts MOST® [3] 1/1,5 mm		**CX MLF**
male contacts MOST® [3] 1/1,5 mm		**CX MLM**

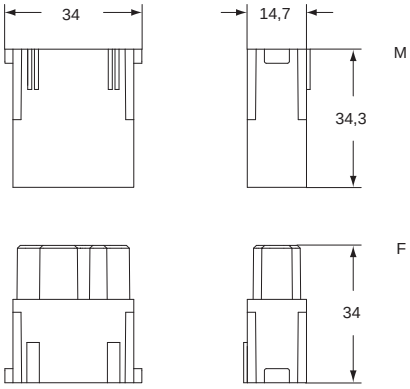

[2] **POF = POLYMER OPTICAL FIBRE**

[3] **MOST® = MEDIA ORIENTED SYSTEM TRANSPORT**
MOST® = is a registered trade mark of Microchip Technology Inc.

- cULus (UL for USA and Canada), SEV, DNV-GL, BUREAU VERITAS, EAC certified [1]
- insulation resistance: ≥ 1 GΩ
- ambient temperature limit: -40 °C ... +85 °C
- inserts made of self-extinguishing thermoplastic resin UL 94V-0
- mechanical life: ≥ 500 cycles
- contact resistance: ≤ 30 mΩ
- for crimp contacts CI series use:
  CIPZ D crimping tool
  CITP D turret head
- max external diameter: 2,2 mm (POF)
  2,3 mm (MOST)
- polymer fibre diameter: 1,0 mm (POF)
  1/1,5 mm (MOST)
- attenuation: < 2.5 dB
- to crimp contacts CX PLF / PLM and CX MLF / MLM please use tool CLPZ R (see the crimping tool section on page 730)

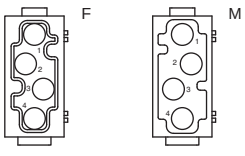

We recommend to use CLASS enclosures with two levers or V-TYPE enclosures (with one or two levers) that provides a higher coupling depth due to the higher locking force they produce. We further suggest the use of code pins CRF CX / CRM CX.

dummy module

description	part No.
dummy module for unused frame seats	**CX FM**

Remark:
The new version is formed by a single piece and has a reduced height.
It allows the mating of a MIXO insert including it with a corresponding MIXO insert even having - in front of the dummy module - a regular male or female module equipped with contacts, which obviously will not work.
The sole exceptions to this feature are that an insert with this dummy module cannot mate an insert showing in front a CX 3/4 XDF/M, CX 04 XF/M or CX 02 HF module.

- certified
- insulation resistance: ≥ 10 GΩ
- made of self-extinguishing thermoplastic resin UL 94V-0
- mechanical life: ≥ 500 cycles

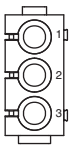

Use of units for pneumatic contacts

- identical male and female modular units
- pneumatic contacts for pressure values up to 8 bar, for use with clean and dry compressed air
- use of tubes with Ø 1,6 - 3 - 4 and 6 mm, and possible replacement of tubes with assembled units
- possibility of using tubes with different diameters in the same modular unit
- female contacts with or without closing valve
- working temperature range - 40 °C ÷ + 80 °C

- 1 frame slot

Warnings:

CRM/F CX code pins and guides must be used for pneumatic contacts modules.
These pins also provide coding if pneumatic contacts modules are used exclusively.

The use of pneumatic contacts requires an appropriate filtering and dehydration system to prevent dangerous condensation.
Contacts may be used for pressure values of up to a maximum of 8 bars/116 psi.

MIXO FRAMES

Made of die-cast zinc alloy

with protective earth (PE) contacts

SUM UP

- Die-cast zinc alloy frames
- Protective earth (PE)
- Possibility of mounting female and male modular units on the same frame
- Polarisation on frames
- When two or more identical connectors of the MIXO series are used, use of coding pins (CR...CX series) may prevent incorrect coupling

TECHNICAL FEATURES

Earth terminal
- large: for cables from 4-6 mm², AWG 12-10
- small: for cables from 1-2,5 mm², AWG 18-14

In order to accomodate larger PE conductor cross-sectional area, use CGT PE adapters, see page 319.

position of modules (contact side view)

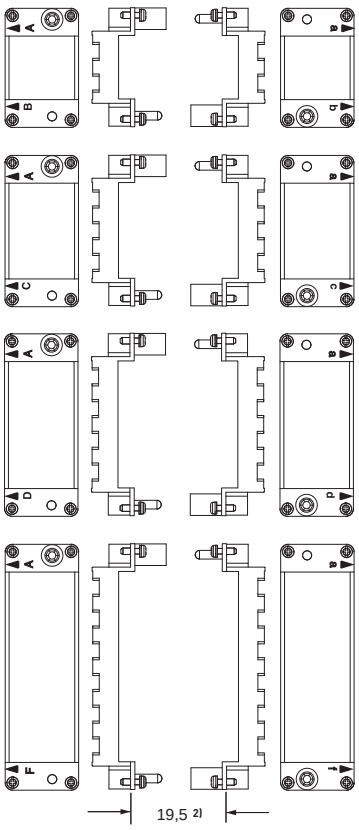

CX CFM (lock-in tab)

Polarisation of frames with relative identification letters and couplings

frame for hoods [1] **frames for housings** [1]

[1] **Warning:**
The module support frames are marked:
- FOR HOODS: **upper-case A-B, A-C, A-D and A-F**
- FOR HOUSINGS: **lower-case a-b, a-c, a-d and a-f**

Positioning the modules in the frames according to the respective letters is ensuring the specular assembly of modules, for which the hood will be coupled correctly to the housing.

[2] Distance for:
- electric and fibre optic contacts: max 21 mm
- pneumatic contacts: max 20,5 mm

CGT 6.0 – CGT 10 – CGT 25

PE terminal adapters for MIXO frames

- **PE terminal adapter CGT 6.0** made of nickel plated brass that allows to connect by crimping a 6 mm² / 10 AWG flexible copper conductor **to the small PE terminal** (2,5 mm² / 14 AWG) of a MIXO frame, in case the connector needs a second PE line sized 6 mm²/10 AWG when the large PE terminal (6 mm²/10 AWG) of the MIXO frame is already occupied by a large size PE conductor, by using the existing PE terminal adapter **CGT 16,** or the new ones for the large PE terminal, **CGT 10 or CGT 25.**

CGT 6.0

- **PE terminal adapters CGT 10 and CGT 25** made of nickel plated brass that allow to connect by crimping respectively a 10 mm² / 8 AWG or a 25 mm² / 4 AWG flexible copper conductor **to the large PE terminal** (6 mm²/10 AWG) of a MIXO frame.

CGT 10

- They are offered in addition to the existing PE terminal adapter **CGT 16** for 16 mm² / 6 AWG protective earth conductor – introduced with MIXO 100A modules **CX 02 G and CX 01 G** – to give more flexibility for the combination of MIXO 100A and 70A high power modules with **multi-core cables,** that have the PE conductor of the same size of the phase conductors.

- Crimping is achieved by using the already available manual hydraulic crimping tool **CGPZ** (Cembre HT 45) with hexagonal crimping dies **CGD 10 C** (for **CGT 10** with 10 mm² / 8 AWG and for **CGT 6.0** with 6 mm² / 10 AWG flexible copper conductors) and **CGD 25 C** (for **CGT 25** with 25 mm² / 4 AWG flexible copper conductors).

CGT 25

CGT 6.0 - CGT 10 - CGT 25

The modular inserts must be installed in suitable frames, which are then mounted in traditional enclosures or in COB panel supports.

page:
frames for modular units **316 - 317**

PE terminal adapter

headless screw M4X6

description	part No.	part No.
PE wire terminal adapter 6 mm² (10 AWG)	**CGT 6.0**	
PE wire terminal adapter 10 mm² (8 AWG)	**CGT 10**	
PE wire terminal adapter 16 mm² (6 AWG) [1]	**CGT 16**	
PE wire terminal adapter 25 mm² (4 AWG)	**CGT 25**	
headless screw M4X6, stainless steel, kit of 10 pcs. (see point 5 below)		**CR VGM4**

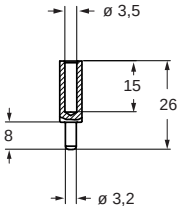

[1] CGT 16 already available

How to use the PE terminal adapter

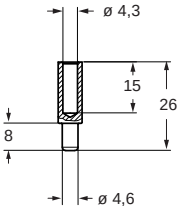

1) Strip 15 mm of flexible PE wire.
2) Crimp the cable on the CGT adapter by using the CGPZ pliers with the dies as follows:
   - **CGD 10 C** for 6 mm² and 10 mm²
   - **CGD 16 C** for 16 mm²
   - **CGD 25 C** for 25 mm²
3) Fix the adapter tip in the larger earth terminal (6 mm²) for CGT 10, CGT 16, CGT 25 or in the smaller earth terminal (2,5 mm²) for CGT 6.0 of frames CX...TM/TF.
4) To be used with bulkhead mounting housings or high construction hoods.
5) Cannot be used with T-TYPE surface mounting housings and horizontal cable outlet hoods. For the use within bulkhead housings and vertical entry hoods it is needed to replace the M4 screw of the 6 mm² PE contact of the frame with the headless screw **CR VGM4**.

MODULES
FOR HIGH NUMBER OF MATINGS

Within the range of **series HNM**, for High Number of Matings, all MIXO modules for crimp contacts 40A, 16A and/or 10A, combined with the use of especially high thickness gold-plated/lubricated crimp contacts of:

- series **RX** (40A HNM variant of series CX),
- series **RC** (16A HNM variant of series CC), and
- series **RD** (10A HNM variant of series CD)

mounted in the dedicated **MIXO HNM frames** cat. nos. **RX 02 /03 /04 /06 TF /TM**, also employing especially gold-plated PE contacts, allow the creation of **HNM** modular connector inserts.

The connector modules of series MIXO that by using HNM 40A contacts series **RX**, HNM 16A contacts series **RC** and/or HNM 10A contacts series **RD** toghether with **MIXO HNM frames** RX 02...06 TF/M can create MIXO HNM modular connector inserts are:

- **CX 02 4F/M**, **CX 03 4F/M**, **CX 03 4BF/M** and **CX 04 XF/XM** (with **RX** HNM contacts)
- **CX 3/4 XDF/M** (with **RX** and **RD** HNM contacts)
- **CX 06 CF/M**, **CX 06P CF/M**, **CX 08 CF/M** and **CX 20 CF/M** (with **RC** HNM contacts)
- **CX 12 DF/M**, **CX 17 DF/M** and **CX 42 DF/M** (with **RD** HNM contacts)

SUM UP

- **Up to 10.000 matings in combination with HNM enclosures**
- **Up to 5.000 matings with standard hoods with single lever**

CX 02 4F/4M 2 poles 40A - 1000V HNM (High Number of Matings)

The modular inserts must be installed in suitable frames, which are then mounted in traditional enclosures* or in COB panel supports.

- male and female contacts finger proof
- their key characteristic **lies in the fact that they guarantee maximum safety even in case of accidental contact with fingers (IP2X or IPXXB)**. Safety is guaranteed as standard on female contacts, but also on male contacts. This feature is important as it ensures full compliance with the recent safety standard **EN 60204-1**, concerning electric equipment fitted on machines and in particular with the requirements of Article 6.2.4 concerning protection against residual voltage. ***In the case of plugs or similar devices, the with drawal of which results in the exposure of conductors (for example pins), the discharge time shall not exceed 1 s, otherwise such conductors shall be protected against direct contact to at least an IP2X or IPXXB.***

gold plated

- characteristics according to EN 61984:
  10A 160V 2,5kV 3
  10A 250V 4kV 2
- certified
- rated voltage according to UL/CSA: 600V
- insulation resistance: ≥ 10 GΩ
- ambient temperature limit: -40 °C ... +125 °C
- made of self-extinguishing thermoplastic resin UL 94V-0
- mechanical life: ≥ 10.000 cycles
- contact resistance: ≤ 3 mΩ
- PCBs interface, refer to article CIF 2.4 on page 670
- **it is recommended to crimp the contacts with crimping tools homologated by ILME** (please see the crimping tool section 10A contacts, RDF2D and RDM2D series) on pages 708 - 741
- for max. current load see the connector inserts derating diagram below; for more information see page 28

- die-cast zinc alloy frames
- protective earth (PE)
- possibility of mounting female and male modular units on the same frame
- frames supplied with lock-in tab to attach units
- polarisation on frames
- coding pins **CR..CX**
- for spare lock-in tab **CX CFM** see SPARE SPARTS catalogue

RX TM / TF

part No.	A (mm)	for housings size
RX 02 TM / TF	44	44,27
RX 03 TM / TF	57	57,27
RX 04 TM / TF	77,5	77,27 and 77,62
RX 06 TM / TF	104	104,27 and 104,62

Earth terminal
- large: for cables from 4-6 mm², AWG 12-10
- small: for cables from 1-2,5 mm², AWG 18-14

In order to accomodate larger PE conductor cross-sectional area, use CGT PE adapters, see page 319.

position of modules (contact side view)

side with reference arrow ▲

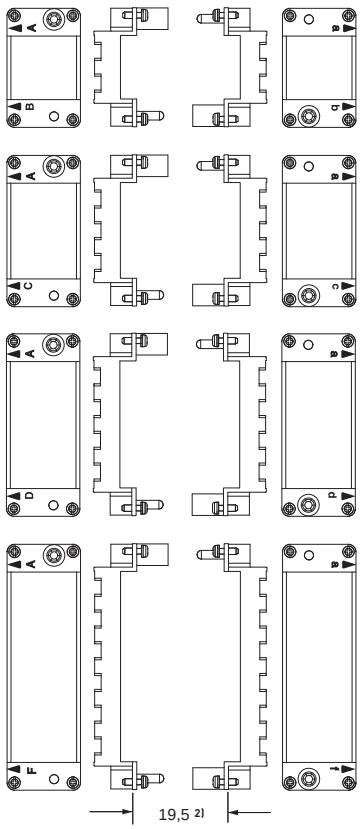

side with reference arrow ▲

CX CFM (lock-in tab)

Polarisation of frames with relative identification letters and couplings

frame for hoods [1] **frames for housings** [1]

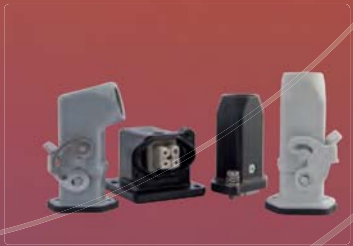

[1] **Warning:**
The module support frames are marked:
- FOR HOODS: **upper-case A-B, A-C, A-D and A-F**
- FOR HOUSINGS: **lower-case a-b, a-c, a-d and a-f**

Positioning the modules in the frames according to the respective letters is ensuring the specular assembly of modules, for which the hood will be coupled correctly to the housing.

[2] Distance for:
- electric and fibre optic contacts: max 21 mm
- pneumatic contacts: max 20,5 mm

Thermoplastic and metallic enclosures size “21.21” for standard or aggressive environments

SUM-UP

- **For use with all size “21.21” connector inserts**
- **Connector inserts for use at SELV are prevented to be installed in metallic enclosures CKA-MKA, CGK-MGK (as they would not provide protective earth connection for the enclosure) thanks to a special key and keyway system in all “21.21” metallic enclosure. Insulating “21.21” enclosures accept all “21.21” inserts**
- **CGK-MGK IP68 enclosures (actually IP66/IP68/IP69) available both with 2-screw locking or by 2-bayonet locking (types with suffix B)**

UL certified for USA and Canada for Type 4, 4X and 12 degrees of protection (enclosure type ratings, equivalent to NEMA rating), printed on the packaging.
IP44 degree of protection, IP66/IP67/IP69 by using the special fixing screw + gasket kit CKR 65(D) separately available, and suitable cable outlet device.
IP66/IP68/IP69 degree of protection for CGK-MGK enclosures equipped with CKR 65(D) kit.

Characteristics of materials for CK and MK series

- Insulating enclosures in self-extinguishing light grey RAL 7035 or jet black RAL 9005 thermoplastic material;
- metal enclosures in die cast zinc or aluminium alloy, according to model;
- metal enclosures with epoxy-polyester thermosetting powder coating grey RAL 7040;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant NBR vinyl nitrile elastomer provided on the “21.21” male inserts (according to model), glued on some hood models and some cover models, or provided as flange gasket (according to model);
- metallic enclosures with block locking lever in stainless or galvanized steel;
- insulating enclosures with single-block locking lever in self-extinguishing thermoplastic material (CK-MK) or with stainless steel lever (CKX- MKX).

M32 fixing thread [1] [•]		**MKAXX IF**
gasket and screw kit for IP66/IP67/IP69 [1]	**CKR 65**	**CKR 65**
gasket and screw kit for IP66/IP67/IP69 [1] specific for CD 08 inserts	**CKR 65 D**	**CKR 65 D**

[1] To obtain the IP66/IP67/IP69 degree of protection, a kit with insert fixing screw and gasket can be purchased separately.
Several inserts size “21.21” are already supplied with fixing screw and gasket, which ensures IP66/IP67/IP69 degree of protection. See list below, not including any special version:
- CQF/M 07, CQF/M 12
- CJ KF/M
- CJK 8FT /8IFT /8MT /8IMT, CJK 8M
- CUK 2FT /3FT
- CX 1/2 BDF/M
- CLK 04 SCF /SCF-H /SCM
- CXL 2/4 PF /PM /PFH /PMH /SF /SM, CXL SF/M.

NOTE: Housing type and colour may vary upon specific part No.

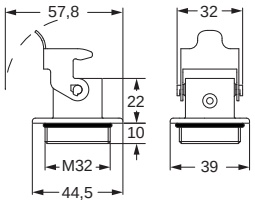

[•] Locknut supplied on request, see Cable glands catalogue (article AS M32N metallic).

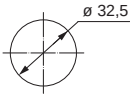

NOTE: Lever colour may vary upon specific part No.

SUM-UP

For use with all size “32.13” connector inserts

Characteristics of materials
for CQ - MQ series

- In self-extinguishing grey RAL 7035 or jet black RAL 9005 thermoplastic material;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant NBR vinyl nitrile elastomer;
- with single-block locking lever in self-extinguishing thermoplastic material.

UL certified for USA and Canada for Type 4, 4X and 12 degrees of protection (enclosure type ratings, equivalent to NEMA rating), printed on the packaging.

IP66/IP67/IP69 degree of protection.

MIXO ONE - CXA - MXA
TECHNICAL FEATURES

MIXO ONE is the aluminium housings system designed by ILME to accept the wide range of MIXO series single-sized modules.

- These robust connector enclosures (3 hood variants and 1 bulkhead mounting housing) transform each single MIXO module into a completely independent connector;
- the enclosures allow mounting of single MIXO module only in one guided way, to avoid incorrect match with the mating connector;
- the enclosures incorporate a pre-leading (first-make, last-break) PE connection terminal and contact, for the safest connector operation;
- the pins protruding from the bulkhead mounting housing act also as key guide, in cooperation with the corresponding keyway sockets in the hoods, to avoid incorrect 180° reversed mating with corresponding connector;
- the rigid locking lever is releasably mounted on moulded pegs that include a stopping teeth;
- the hoods are split in two parts (front, rear), to allow MIXO module mounting and simplify the enclosure's PE connection. Supplied with four self-threading screws and self-retaining sealing gasket;
- the bulkhead mounting housing is supplied with the module locking frame and self-retaining flange gasket;
- four optional coding pins available for up to 16 different codings, as a provision against mismatching when identical connectors are installed side by side;
- protection covers for hoods and housings , either with pegs (for enclosures with locking lever and sealing gasket) or with locking lever and sealing gasket (for enclosures with pegs) available either with eyelet-terminated string (for fastening to housings) or with loop-terminated cord (for fastening to hoods, around the incoming cable).

SUM-UP

- **Aluminium die cast alloy, nickel plated**
- **Rigid stainless steel locking lever**
- **Hoods split in two parts (front, rear), to simplify the PE connection. Supplied with four self-threading screws and sealing gasket**
- **Four optional coding pins for up to 16 different codings, as a provision against mismatching when identical connectors are installed side by side**
- **Protection covers for hoods and housings made in shock-proof thermoplastic material, either with pegs (for enclosures with locking lever and sealing gasket) or with locking lever and sealing gasket (for enclosures with pegs) both with eyelet-terminated string (for fastening to housings) or with loop-terminated cord (for fastening to hoods, around the incoming cable)**

PE terminal
On both the bulkhead mounting housing and on the hood front part, PE screw terminal without protection plate, zinc plated steel terminal screw with rounded tip.
Connecting capacity:
0,5 mm² (20 AWG) – 10 mm² (8 AWG) both unprepared and prepared stranded copper wire.
PE terminal screw head footprint:
for Ph1 or 1,0x5,5 mm flat screwdriver, recommended torque 1,2 Nm (10.6 lb.in)
NOTE:
Some regulations may require conductor preparation with a crimped end sleeve.
Recommended crimp shape: square, e.g. by using Rennsteig ferrule crimping pliers PEW 8.85 (610 1853).

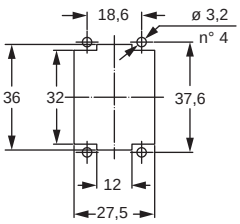

CXA I

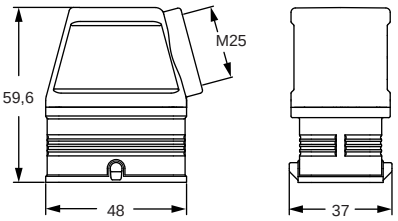

* for M3 fixing screws (not supplied) with maximum 6 mm head diameter

IL-BRID

IL-BRID

Soft closing, strong hold

Through its original design, the IL-BRID locking lever combines the smoothness of the thermoplastic material with the sturdiness of the stainless steel spring; it has also a linear design which favours a quick wash without retaining external elements.

SUM-UP

- **Soft closing: in the first phase, the thermoplastic locking lever component comes into play: sliding the new locking lever on the pin reduces friction and wear. It is suitable in all applications with frequent opening and closing**
- **Strong hold: after the first closing phase involving the plastic component, the stainless steel hook intervenes to guarantee higher resistance to mechanical stress**

- IP66/IP69 degree of protection.
- IP65 degree of protection versions with hinged cover.

Characteristics of materials for CZ and MZ series

- Made of die cast aluminium alloy;
- with epoxy-polyester powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device with levers and springs in stainless steel;
- lever handles in self-extinguishing thermoplastic material reinforced with glass fibres, UL approved (for CZ and MZ enclosures).

CZ7 - MZ7

Rigid coupling

Enclosures with rigid stainless steel lever to assure an IP66/IP67/IP69 dust and watertight seal.

SUM-UP

- **C7 series: V-TYPE stainless steel locking lever, vertical closing**
- **Sizes 44.27, 57.27, 77.27, 104.27**
- **With and without hinged cover (except size 57.27)**
- **Bulkhead or surface mounting**
- **Recommended in case of vibrations or heavy weight of cables**

- **CZ7 series: stainless steel locking lever, rigid**
- **Sizes 49.16, 66.16**
- **With and without hinged cover**
- **Bulkhead or surface mounting**
- **Recommended in case of vibrations or heavy weight of cables.**

IP66/IP69, IP66/IP67/IP69 degrees of protection according to model.

Characteristics of materials for CZ and MZ series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device integrally in stainless steel;
- ambient temperature range: -40 °C / +125 °C.

Hoods (page 376)

The rigid lever offers an IP66/IP67/IP69 degree of protection (according to EN 60529) when fitted with a complete and coupled connector and used with ILME standard hoods in die cast aluminum with pegs (without adapter).

cULus Type 4/4X/12

IP65 insulating cable gland or fittings without gasket

IP66 IP67 IP69 cable gland with O-Ring gasket
IP67 if coupled with IP67 hood or cover

For bulkhead mounting housings, IP66/IP67/IP69 degree of protection is guaranteed for mounting on a sufficiently rigid panel; use M3 screws of suitable length (negligible surface buckling when subjected to tightening torque on the fixing screws of 0,9 - 1 Nm or to deformation caused by the weight of the complete connector).
In addition, the panel surface in contact with the flange gasket of the bulkhead mounting housings must be free from defects (deep scratches, grooves, burrs) that could negatively affect the performance of the gasket.

In addition, the panel surface in contact with the flange gasket of the bulkhead mounting housings must be free from defects (deep scratches, grooves, burrs) that could negatively affect the performance of the gasket.

C-TYPE

The classic choice

This series has been developed for application in electrical and electronic machinery, control units, electrical panels, control equipment, in industrial environments and in general, wherever a reliable and easily disconnectable connection is required for power and signal circuits.

SUM-UP

The inserts of the CMCE series (except the 16+2 poles) and of the CMSH series may use standard enclosures also for uses of up to 830V

UL certified for USA and Canada for Type 4, 4X (outdoor use) and 12 (indoor use) degrees of protection (enclosure type rating), marked on the packaging.
IP65 or IP66/IP69 degrees of protection according to model.

Characteristics of materials for CH, CA and MH, MA, MF series

- Made of die cast aluminium alloy;
- with epoxy-polyester thermosetting powder coating;
- gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer;
- locking device with levers, springs and pins in stainless steel;
- lever handles in self-extinguishing thermoplastic material reinforced with glass fibres, UL approved (for CH, CA and MH, MA enclosures);
- ambient temperature range: -40 °C / +125 °C.

[1] can only be used only with a complete cable gland (to be purchased separately)

[2] may be combined with enclosures:
- CHO/CAO 10 X and CHV/CAV 10 X
- MHO/MAO 10 X and MHV/MAV 10 X

IMPORTANT NOTE: The enclosures ensure IP66/IP69 degree of protection (or IP65 for hinged cover versions) when mated and locked with the closing levers. The cover (CS, CP) only ensures mechanical protection, but does not ensure IP65 degree of protection.

[1] can only be used with a complete cable gland (to be purchased separately)

[2] may be combined with enclosures:
- CHO/CAO 16 X and CHV/CAV 16 X
- MHO/MAO 16 X and MHV/MAV 16 X

IMPORTANT NOTE: The enclosures ensure IP66/IP69 degree of protection (or IP65 for hinged cover versions) when mated and locked with the closing levers. The cover (CS, CP) only ensures mechanical protection, but does not ensure IP65 degree of protection.

CR CLK
locking device for CLASS locking levers
(page 666)

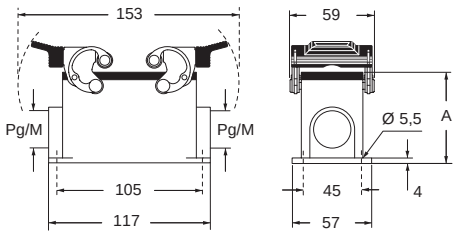

Type 4/4X/12
(except enclosures with plastic cover)

with pegs for two levers, top entry, without adapter [1]	**CQV 24**	36	**MQV 24.40**	40

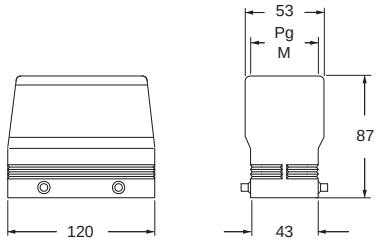

[1] enclosure without adapter, threaded on the body, to be used only with a complete cable gland.

IP degrees are according to the type of lever of the counterpart enclosures.
Alternatively, hoods with pegs may be coupled with fixed enclosures:
- C-TYPE, IP65 or IP66/IP69 stainless steel lever, from page 412 to page 422
- C7, IP66/**IP67**/IP69 stainless steel lever, page 441
- CV, IP65 or IP66/IP69 stainless steel lever, page 460 and 461

CQO and **MQO**

CQV and **MQV**

V-TYPE

Extra tough

The performance requirements in **connection protection** are increasingly varied and specialized.

To respond to this wide range of needs, **ILME has developed several original solutions, including the innovative V-TYPE lever**.

This proprietary lever, due to the **vertical closing movement, offers an IP66/IP67/IP69 degree of protection** (according to EN 60529) when fitted with a complete and coupled connector **and used with ILME standard hoods in die cast aluminium moulded (without adaptor)**.

The high degree of protection is therefore not dependant on the use of special gaskets or locking devices.

The fixing flanges are the same as those fitted on traditional models.

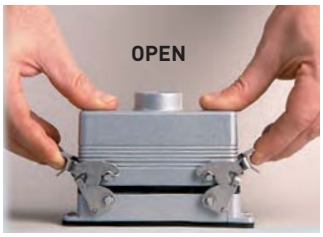

This means it is possible to use the new housings **as alternatives to the traditional version without affecting the interchangeability,** or changing dimensions, spaces, flanges or fixing positions.

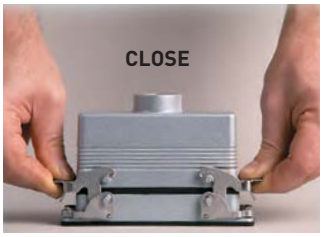

This lever differs from other commercial ones because of its closing movement principle, consisting of 2 hinged elements that are then pivoted on the housing.

This composite movement enables to move the lever above the pin of the housing that has to be fixed in place with an initial rotatory movement and then press it downwards to engage the locking mechanism.

The tight seal after closure and the simplicity of the movement are key characteristics that **only ILME has managed to combine into a single lever.**

SUM-UP

- **The friction on the pin is almost zero because the lever exerts its pressure vertically, thus significantly reducing wear in case of frequent use**
- **The complete lever is manufactured in stainless steel and is fitted with a catch that prevents it from being accidentally detached**
- **The absence of parts in plastic offers a higher resistance to impacts and in case of contact with oils and aggressive chemical substances or high ambient temperatures**
- **The lever can be used for applications with vibrations because it has no springs and is therefore more rigid**
- **The lever occupies a very small space during the closing phase**
- **It is recommended in cases when the cable weight forces the levers to open, such as vertically installed connectors and the cable is mounted in the bottom**

The interchangeability with equivalent traditional levers with springs and rollers **simplifies the management of stocks, reduces costs and increases flexibility of use.**

Available in bulkhead or surface-mounted versions for sizes 44.27 with a single lever, 57.27, 77.27 and 104.27 with 2 levers. High construction models are available on request.

The item code identifies the series with the **suffix C7 or M7**:

- **C7I** bulkhead mounting housing
- **C7P** surface mounting housing, Pg thread, standard height
- **M7P** surface mounting housing, metric thread, standard height
- **C7AP** surface mounting housing, Pg thread, high
- **M7AP** surface mounting housing, metric thread, high.

panel cut-out for bulkhead mounting housings

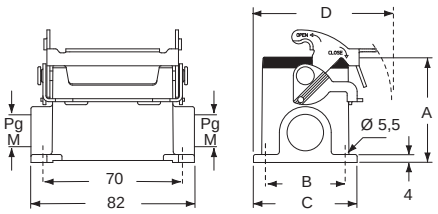

The lever, due to the vertical closing movement, offers an IP66/IP67/IP69 degree of protection (according to EN 60529) when fitted with a complete and coupled connector and used with ILME standard hoods in die cast aluminum with pegs (without adapter).

C7I L

For bulkhead mounting housings, IP66/IP67/IP69 degree of protection is guaranteed for mounting on a sufficiently rigid panel; use suitable length M4 screws (negligible surface buckling when subjected to tightening couple on the fixing screws of 0,8 - 1,2 Nm or deformation caused by the weight of the complete connector). In case of insufficient rigidity use of C7.. FL counterflanges (page 443) is recommended, in which case use suitable length M4 screws and M4 (on the enclosure) and M4 (on the counterflange) flat/ spring washers with M4 locknut.
In addition, the panel surface in contact with the counterflange gasket of the bulkhead mounting housings must be free from defects (deep scratches, grooves, burrs) that could negatively affect the performance of the gasket.

C7I

C7P - C7AP and **M7P - M7AP**

The lever, due to the vertical closing movement, offers an IP66/IP67/IP69 degree of protection (according to EN 60529) when fitted with a complete and coupled connector and used with ILME standard hoods in die cast aluminum with pegs (without adapter).

For bulkhead mounting housings, IP66/IP67/IP69 degree of protection is guaranteed for mounting on a sufficiently rigid panel; use suitable length M4 screws (negligible surface buckling when subjected to tightening couple on the fixing screws of 0,8 - 1,2 Nm or deformation caused by the weight of the complete connector). In case of insufficient rigidity use of C7.. FL counterflanges (page 443) is recommended, in which case use suitable length M4 screws and M4 (on the enclosure) and M4 (on the counterflange) flat/ spring washers with M4 locknut.
In addition, the panel surface in contact with the counterflange gasket of the bulkhead mounting housings must be free from defects (deep scratches, grooves, burrs) that could negatively affect the performance of the gasket.

The space
you have always needed

BIG Series, based on the wide-ranging experience achieved by ILME, introduces a significant **change in the design of hoods and has been specifically designed to meet the new requirements of the wiring market**. The enclosures **integrate the existing range** and **are ideal for installations with structured and complex wiring**.

Accurate design

The **large dimensions** of these innovative enclosures have been chosen to offer customers an **adequate space to store conductors**.

The **width** of the new enclosures is **greater than that of previous versions**: 66 mm compared to the 43 mm for standard enclosures. The **height** of BIG enclosures has also been **increased to 100 mm** for sizes “44.27” and “57.27” (standard versions for high models: 70 and 72mm), **and to 110 mm** for sizes “77.27” and “104.27” (standard versions for high models: 76 mm).

The cable compartment is now fully accessible during assembly (the connector insert is fully inserted in the lower half of the enclosure), **offering three times the space compared to standard enclosures**. This means it is possible to bend cables and pipes with greater bending radii.

Due to this important feature, the new BIG enclosures are **particularly suitable for MIXO modular inserts**, being versatile and customizable, for multiple cable entries.

Each insert, differentiated according to electric power or signal, pneumatic, optical fibre or Ethernet network current, **may thus have the specific branching. One single large connector can replace what previously required two connectors**.

Ease of use

The possibility of **splitting the enclosure in two halves simplifies the installation of the insert**. It is also possible to **connect the insert with a cable and later insert it in the lower half of the enclosure** (except for the 6 pole version).

Options for the connection of control and signalling devices

All the five walls of the upper half of the enclosure have a high thickness to allow them to be drilled and threaded, even with multiple threads.

BIG enclosures enable the connection – of push – buttons, selectors, switches and signalling lamps after the necessary holes have been drilled. It is possible, for example, to enable power supplies or signalling circuits, even after the connector has been coupled.

Simplified installation

Installation operations for the new hoods are simple and fast.
No special accessories, tools or expensive additional operations are required.

The lower half of the enclosure must be fixed to the upper half by means of the 4 screws supplied.

It is possible to prevent the fixing screws from coming loose by fitting on each screw the O-ring seal supplied with the enclosures.

Compartment for electronic boards

It is possible to install electronic boards in the lower section of enclosures with side entry. In this case, it is however necessary to order CR MBS screws separately to fix the board in place.

Greater protection

It is also possible to fix one earthing terminal in the upper half of the enclosure to provide protection against indirect contacts.

In this case, it is however necessary to order separately earthing terminal CR MBT, consisting of a fixing screws and a wire-terminal for 6 mm^2 conductors.

Range

The items are classified with the following pre-code:

- MBO for enclosures with side entry
- MBV for enclosures with one or more top entries
- MBVO for enclosures with top and side entries
- CBC for closed enclosures that can be drilled

The available versions are:

- for enclosures with size “44.27”: **single lever**
- for enclosures with sizes “57.27”, “72.27” and “104.27”: **two levers**

SUM-UP

- **The BIG enclosures are made in die-cast aluminum alloy and are fitted with cast pegs with a reinforced design, painted with epoxy-polyester powder paint. The sealing gasket in anti-aging NBR elastomer, resistant to oils and fuels, is positioned internally to guarantee a greater protection from light and atmospheric agents**
- **BIG enclosures guarantee an IP66 protection rating (EN 60529) after the connector has been coupled, and completed with appropriate cable glands; they are manufactured in compliance with standard IEC/EN 61984**
- **Ambient temperature range -40°C / +125°C**
- **Versions for class W aggressive environments are also available on request**

WARNING:

Due to the considerable weight of BIG hoods, when fitted with inserts, conductors and cable glands, we recommend to use them in combination with housings fitted with V-TYPE closing levers (C7/M7/CV/MV).

If used in combination with enclosures series CLASS, it is advisable to appropriately anchor the cables in order to prevent their weight from being applied to the closing levers.

T-TYPE general information

International standards

T-TYPE enclosures have been **successfully** tested in accordance with the following international standards, guaranteeing their usage for numerous applications:

- **EN 61984: Connectors - Safety requirements and tests.**
- **ANSI/UL 50 (Enclosures for Electrical Equipment)** equivalent to voluntary North American standard NEMA 250 (NEMA = National Electrical Manufactures Association) and the corresponding Canadian standard CSA C22.2 No. 94 (Special Purpose Enclosures) for degrees of protection used in North America and required by local installation codes (e.g. NFPA 70 National Electrical Code in the USA, CSA plant standards for Canada). The current type approval was obtained after passing a series of tests carried out in accordance with the standard, in particular: **Type 12 (= NEMA 12)** for internal use, similar to degree of protection IP54 according to IEC/EN 60529. (Only standard T-TYPE enclosures).
- **EN 60529: Degrees of protection provided by enclosures (IP Code)** for ratings IP65, IP66 and IP69 (according to type).
- **EN 62262: Degrees of protection provided by enclosures for electrical equipment against external mechanical impacts (IK Code)** for ratings IK09 (enclosures with levers), IK10 (enclosures without levers).
- **IEC 60068-2-52: Environmental testing - Part 2-52:**
  Salt mist, cyclic: with 5% solution of sodium chloride (NaCl), solution Ph from 6,5 to 7,2;
  ENVIRONMENTAL CONDITIONS: salt mist 35 °C for 2 hours; 40 °C for 168 hours with 93% relative humidity;
  NO. OF CYCLES: 4;
  TEST PASSED: maintaining the IP degree of protection and with a change of contact resistance ≤ 50% of the initial value or ≤ 5 mΩ.
- **IEC 60068-2-6: Environmental testing - Part 2-6:**
  Vibration (sinusoidal): with values 10Hz÷500Hz, 0,35 mm amplitude of displacement, 50m/s^2 (5g$_n$), crossover point 60,1 Hz;
  NO. OF CYCLES: 10;
  TEST PASSED: scanning 3 axes for 2 hours, with a change of contact resistance value ≤ 50% of the initial value or ≤ 5 mΩ and no micro-interruption (≥ 1 μs).
- **IEC 60068-2-3: Environmental testing - Part 2-3:**
  Damp heat, steady state: at 40 °C, 93% relative humidity, 504 hours;
  TEST PASSED: with a change of contact resistance value ≤ 50% of the initial value or ≤ 5 mΩ and no disruptive discharge (insulation resistance > 100 GΩ).
- **IEC 60068-2-30: Environmental testing - Part 2-30:**
  Damp heat, cyclic: 40 °C, 95% relative humidity, 12 hours at ambient temperature;
  NO. OF CYCLES: 21;
  TEST PASSED: with a change of contact resistance value ≤ 50% of the initial value or ≤ 5 mΩ and no disruptive discharge (insulation resistance > 100 GΩ).

The classification herewith provided is only a generic reference guide in order to enable a first selection. It is based on literature data provided by the suppliers of the raw materials used, which are related to tests carried out on specimens under test conditions which are not always homogeneous and involving accelerating techniques, therefore not necessarily describing real operational conditions. The actual behaviour of products in the field may therefore be positively or negatively influenced by several variable environmental parameters such as temperature, relative humidity, simultaneous presence of a plurality of substances and their concentration, exposure time, dynamic or static application condition, and so on. The accuracy of transferring the indications given herein to the actual conditions of use is therefore merely indicative and does not imply any guarantee or responsibility by ILME.

T-TYPE standard

For modular and standard inserts

Alongside the wide range of traditional metallic enclosures for multipole connectors, ILME first "pioneered" a **series of enclosures in self-extinguishing thermoplastic material** in the most common sizes "44.27", "57.27", "77.27" and "104.27".

Quality and money saving are the main features of these enclosures, as an outcome of careful product studies.

Valuable characteristics of these new versions of enclosures:

- **significant structural solidity** and mechanical robustness by virtue of **substantial thickness;**
- **external dimensions** of the bulkhead mounting housings are **similar to those of the corresponding metallic enclosures; hole fixing centres are unchanged;**
- **pre-fastened gaskets** for easier installation;
- **wide space inside the enclosures** for cables, with mounted connector inserts, similar to the corresponding "high construction" versions;
- possibility of making **total insulation** constructions (equivalent to Class II) ⧈ ;
- **absence of powder paint** for environments in which these are not recommended (e.g. to avoid food contamination).

STANDARD APPLICATIONS

SUM-UP

- **Enclosures in thermoplastic material, dark grey RAL 7012 colour, with high thicknesses providing structural solidity and durability**
- **Built-in polyurethane gaskets**
- **Locking levers in thermoplastic material colour grey RAL 7001**
- **M25, M32 and M40 threaded cable entries**
- **IP65 degree of protection according to EN 60529**
- **UL TYPE 12 degree of protection according to ANSI/UL50**
- **Each enclosure carries its own part number, thread/size, conformity markings and UL type rating**
- **Ambient temperature range: -40 °C / +90 °C**

Interchangeability with other ILME series

T-TYPE series housings can be coupled with metal hoods.
Insulating hoods can be coupled with "V-TYPE" metal housings.

Hoods "57.27", "77.27" and "104.07" can be mounted on COB TCQ and COB BC frames simply by replacing the supplied levers with COB L levers (to be purchased separately).

Insulating enclosures are ideal for mounting of all ILME inserts with the exception of series models CT 40/ 64 and CTS 40/ 64 connector.

Inserts with 45° terminals of the CT series (screw-type terminals) and CTSE (spring terminals) are only insertable from the front (therefore not from the back) of the bulkhead mounting housings.

Being made by insulating material, they do not require a special reinforced insulation as metal ones do, for use with series CME higher voltage connector inserts (screw-type terminals).

With the exception of the limitations described below, it is generally possible to mount the MIXO series modular connectors and frames with the ground and screen anchors dedicated to this series.

Limitations

With respect to enclosures in metal alloy, ILME insulating enclosures have some limitations of use in combination with particular accessories:

- CRZ 06/ 10/ 16/ 24 reduction plates cannot be mounted with bulkhead mounting housings due to increased dimensions of the fastening flange of these insulating enclosures.
- The CYG 16 in-line joint cannot be mounted on the bulkhead mounting housings T-TYPE series because the gaskets of the latter do not fit together with the joint profile.
- The CYR 16.3 and CYR 24.4 round cable feed-throughs are difficult to position on their respective bulkhead mounting housings T-TYPE series.
- CPT 24 disposable protection cover cannot be mounted on insulating enclosures due to increased outer dimensions of these enclosures.
- MIXO series insert anchors cannot be mounted on TMAO 06/10 enclosures.
- CN insert anchors cannot be mounted on TMAO 06/10 enclosures.
- When using both cable entries of surface mounting housings, the conduit shall be of insulating type.

FOCUS ON:

1 Construction

By using the BC-MUL® moulding technique together with the use of MIL.BOX® material, **these enclosures are structurally solid and mechanically robust**, due to their increased thickness. They are particularly resistant to the main pollutants present in industrial environments. The lever enclosure pegs are built into the enclosures. The means for fastening the connector inserts to the enclosures consist of four M3 threaded metal inserts. Compared with metal construction enclosures, which – in order to comply with the electrical installation safety norms – must be earthed via a metal connection to the protective earth terminal of the inserts mounted inside the enclosures, this series of enclosures offers a solution for **total insulation constructions** ⧈ (equivalent to class II) where necessary.The thermoplastic material used is RAL 7012 dark grey colour and **UL 94V-2** grade self-extinguishing and has passed the glow wire testing (GWEPT) in accordance with the EN IEC 60695-2-11 at **850 °C**, in excess of what required by the intended uses. The **surface mounting** high construction housings are supplied **with an open threaded entry** and diametrically opposite a closed threaded entry, which can be **opened** by the user, if required (with suitable tool). Manufactured from insulating material, they do not require **special reinforced insulation** as the metal versions do, for use with series **CME higher voltage** connector inserts (screw-type terminals), available only upon request.

2 Gaskets

T-TYPE standard sealing gaskets have been produced by means of the FIPFG technology (Formed-In-Place-Foam-Gasket). They have therefore been incorporated in the base flange on bulkhead mounting housings for easier installation.

T-TYPE standard: Built-in polyurethane gaskets

3 Levers

The locking levers have been produced in self-extinguishing thermoplastic material, grey RAL 7001 colour.

4 Dimensions

The internal dimensions allow mounting of all connector inserts in their relevant sizes. The external dimensions of the bulkhead mounting housings are similar to those of the corresponding metallic enclosures; hole fixing centres are unchanged.

Hoods offer an inner cabling space similar to that of the “high” construction models of the corresponding metal enclosures. Other characteristics are in compliance with the applicable safety standard for electrical connectors, IEC/EN 61984.

5 Cable entries

The housing and hood cable entries are available with metric thread, respectively:

M25 or M32 for smaller sizes “44.27” and “57.27”.
M32 or M40 for larger sizes “77.27” and “104.27”.

The recent standard IEC/EN 61076-7-100 regarding metric cable entries for multipole electrical connectors for heavy duty uses, which standardises some main dimensions for entries and their related accessories (gaskets, pressure nuts), have been carefully considered in the product design.

6 Markings

Each enclosure carries its own part number and conformity markings.

T-TYPE HYGIENIC

Resistance of materials to detergents/disinfectants used in the food industry

ECOLAB
Everywhere It Matters.

ILME T-TYPE/H and T-TYPE/C enclosure materials have been selected to guarantee compatibility with the principal alkaline or acid detergents and disinfectants used in the food industry. In particular, series T-TYPE/H and T-TYPE/C enclosures have been tested according to protocol **F&E/P3-E n. 40-1 by Ecolab,** leading multinational in the detergent sector, to verify their compatibility with the following cleaning fluids:

- **Acid foaming detergents: P3-topax 52, Topaz AC5, P3-topmaxx 520 and P3-topax 56.**
- **Alkaline foaming detergents: P3-topax 19, Topaz MD3 and Ecofoam Basic.**
- **Strong alkaline foaming detergents: P3-topax 36, Topaz HD1 and P3-topax 30.**
- **Alkaline-chloride foaming detergents-disinfectants: P3-topax 66, Ecofoam CL and P3-topax M95.**
- **Non-foaming peracetic based disinfectants: P3-oxonia active, P3-topactive OKTO and P3-topactive DES.**
- **Neutral disinfectants: P3-topax 990 and P3-topax 91.**

- Full immersion of parts in detergent/disinfectant solutions.
- Water hardness of 200ppm $CaCO_3$
- Tests performed at concentrations 30% higher than those normally recommended in technical data sheets.
- Test duration (each detergent): 28 days at 20 °C (equivalent to 6 years of daily cleaning).
- Test solution renewed every 3-4 days for oxidizing products (P3-oxonia active, P3-topactive OKTO, P3-topax 66).
- Test results evaluation: ISO 4068-1 (esthetic appearance and mass loss).

Cleanability and degrees of protection used in the food industry

ECOLAB F&E/P3-E n. 40-1 Test Protocol
see declaration of compatibility at pages 494-495

Series T-TYPE/H and T-TYPE/C enclosures have been designed to facilitate cleaning of surfaces that could potentially come into contact with food. For this purpose **Series T-TYPE/H and T-TYPE/C** enclosures have **IP66 and IP69 degrees of protection as per IEC 60529 Edition 2.2 (2013-08)** to allow jet washing, as typically used in the food industry.

The suitability of ILME products for the **cleanability** requirements stated by Machinery Directive 2006/42/EC for both Splash and Food Area zones (EN 1672-2 and EN ISO 14159) **depends on the specific installation of ILME products on the machine and must be evaluated by the machine manufacturer**.

In addition to the Hygienic version, aluminium enclosures are also available with degrees of protection up to IP68 (check for possible applicability).

HYGIENIC T-TYPE/H
for food & beverage

HYGIENIC T-TYPE/C
for low temperatures

P3-topactive okto	3	C and H	0	0	0
P3-topax 66	6	C and H	0	0	0

DEFECT QUANTITY: 0 means - No detectable defect
DEFECT QUALITY: 0 means - Up to 10x magnification no detectable defect
COLOR VARIATION: 0 means - Unchanged, no discoloration

Test procedure

- Test performed by Ecolab Technical Application Service
- Ecolab reference method 40.1 – ISO 4068-1 for the evaluation
- Full immersion of parts in detergent/disinfectant solutions
- Water hardness of 200ppm $CaCO_3$
- 28 days total time at 20°C (equivalent to the contact time that occurs in 6 years of daily cleaning)
- Concentrations tested 30% higher than those normally recommended
- Test solution renewed every 3-4 days for oxidizing products (P3-oxonia active, P3-topactive OKTO, P3-topax 66)

Final statement

- The Ecolab Technical Application Service Italy certifies that the ILME enclosures for multipole connectors T-type/C and T-type/H are perfectly compatible with the above listed Ecolab detergents and disinfectants used in a concentration 30% higher than those normally recommended.

February 2016

HYGIENIC

Requirements on materials in contact or that may come into contact with food products

T-TYPE/H and T-TYPE/C materials have been selected to satisfy the requirements of EHEDG Guideline n° 32 “Materials of construction for food equipment in contact with food” and point 2.1.1, letter a) in Annex I of the Machinery Directive 2006/42/EC. Paragraph 91 of the Guide to the application of Machinery Directive 2006/42/EC specifies that the reference at Annex I, point 2.1.1, letter a) of the directive must be considered as a reference to EC regulation n. 1935/2004 and directive 2002/72/EC.

EU commission regulation n. 10/2011 dated 14 January 2011, concerning plastic material and objects designed for contact with food products, is a specific measure as provided for by article 5, paragraph 1 of the above-mentioned EC regulation n. 1935/2004.

It defines specific regulations for plastic materials and objects in order to guarantee their use in safe conditions and supersedes commission directive 2002/72/EC dated 6 August 2002 on plastic materials and objects designed for contact with food products. Art. 2, section 2 of the above-mentioned EU regulation n. 10/2011 specifies that rubber and silicone do not fall within the field of application of the regulation. EU regulation n. 10/2011 provides for the use of materials in positive lists of technological monomers, additives and adjuvants and the passing of global and specific migration tests in food simulants.

ILME T-TYPE/H and T-TYPE/C series enclosure materials have been selected according to EU n. 10/2011 regulation requirements and each component has been tested according to EU regulation n. 10/2011 and EC regulation n. 1935/2004.

Furthermore, T-TYPE/H and T-TYPE/C series gasket materials have been formulated according to FDA Guideline 21 CFR §177.2600 and T-TYPE enclosures and levers materials complying with FDA, 21 CFR, §177.1520 (a)(3)(i)(c)(1), (b) and (c)3.1a.

HYGIENIC

Risk Assessment and Critical Control Points in the food industry

Companies that work in the food sector must implement HACCP, i.e. Hazard Analysis and Critical Control Points system (EC Regulation 852/2004 on food product hygiene in force since 01/01/2006) and can voluntarily apply for various certificates (ISO 22000, BRC, ISF, etc.).

All those involved in primary food production (harvesting, milking, breeding), its preparation, transformation, manufacturing, packaging, storage, transport, distribution, handling, sales or supply, including consumer catering, are required to implement an HACCP system, i.e. a series of procedures aimed at preventing food contamination hazards. HACCP is based on monitoring food processing points where biological, chemical or physical contamination hazards may arise. In 2006, HACCP was made mandatory for companies that deal with the food for animals (production of raw materials, mixtures and additives).

A company required to implement HACCP can initially divide its food processing machinery into three zones from the point of view of risk for food product hygiene. The choice of the zone in which the wiring and connectors are installed depends on the risk assessment the manufacturer must conduct as per Machinery Directive 2006/42/EC which, in chapter 2.1, sets out the additional requirements for the food industry (see Table 1).

Table 1. According to EN 1672-2:2009 - Food processing machinery - Basic concepts - Part 2: Hygiene requirements

Application Zones	Zone Requirements	Usable Products
No Food Area: Zone where there is no contact risk with food.	No additional requirement for the food industry.	Enclosures series T-TYPE, T-TYPE/W, C-TYPE, BIG, IP68, C7 IP67, W-TYPE, EMC, COB, ...
Splash Area: Zone where components may come into contact with food but there is no risk that the food that came into contact with the components in this area returns to the production cycle.	In this zone, components also come into contact with cleaning agents used in the food industry and must therefore be cleanable and resistant to the washing process (see "Resistance of materials to detergents/ disinfectants used in the food industry" and "Cleanability and degrees of protection used in the food industry").	New Hygienic version enclosures series T-TYPE/H and T-TYPE/C.
Food Area: Zone where components may come into contact with food, with the risk that the food that came into contact with the components in this area returns to the production cycle.	In this zone, in addition to complying with the cleanability and washing requirements, the components are also subject to a series of more stringent requirements aimed at making negligible the risk of food contamination in the process (see paragraph "Requirements on materials in contact or that may come into contact with food products").	For more information about T-TYPE/C in special version, please contact our Offices.

HYGIENIC

T-TYPE/H & T-TYPE/C

The evolution of T-TYPE insulating enclosures meets food and beverage requirements

The new Hygienic multi-pole connector enclosures version (series T-TYPE/H and T-TYPE/C) has been designed for installation on food industry machines and systems.

For this purpose, the following improvements to the T-TYPE series have been made in order to satisfy the requirements laid down by chapter 2.1 of Machinery Directive 2006/42/EC for the machines on which they are installed:

- material cleanability and resistance to the cleaning and sanitising agents normally used in the food industry;
- materials in terms of the requirements for accidental contact with food products.

The T-TYPE/H and T-TYPE/C series enclosures fit different sealing gaskets.

For T-Type/H series enclosures, the sealing gasket is in HNBR rubber, a material with excellent resistance to both acidic and alkaline detergents as well as any animal and vegetable fats it could come into contact with in food industry applications.

For T-TYPE/C series enclosures, the sealing gasket is made by silicone rubber, a material with good resistance to acidic and alkaline detergents as well as animal and vegetable fats. It is also characterised by its improved resistance to low temperatures (series suitable for uses as low as -50 °C), conditions that can arise in food industries that use the cold chain.

A dedicated variant of this new Hygienic version may be used where a high risk of accidental contact with food is occuring during production (see Table 1, Application Zones, Food Area). For more information about this possible special version, please contact our Offices.

In accordance with the requirements set forth in EHEDG Guideline n. 32 “Materials of construction for food equipment in contact with food” (EHEDG = European Hygienic Engineering & Design Group), the closing levers and sealing gaskets are coloured blue to easily identify any accidental contaminations in food products and to facilitate the visual identification of their complete cleanliness.

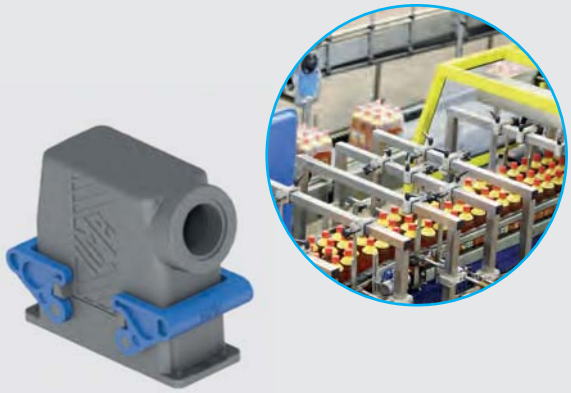

For this purpose, the following improvements to the T-TYPE series have been made in order to satisfy the requirements laid down by chapter 2.1 of **Machinery Directive 2006/42/EC** for the machines on which they are installed:

- material cleanability and resistance to the cleaning and sanitising agents normally used in the food industry;
- materials in terms of the requirements for accidental contact with food products.

T-TYPE/H - PRODUCTION LINES APPLICATIONS

SUM-UP

- **Enclosures in thermoplastic material, dark grey RAL 7012 colour, with high thicknesses providing structural solidity and durability**
- **Sealing gaskets made by HNBR rubber formulated in accordance with FDA Guideline 21 CFR §177.2600**
- **Levers in thermoplastic material, blue RAL 5015 colour**
- **M25, M32 and M40 threaded cable entries**
- **IP66 and IP69 degree of protection according to EN 60529**
- **Each enclosure carries its own part number, thread/size and conformity markings**
- **Ambient temperature range: -40 °C / +70 °C**

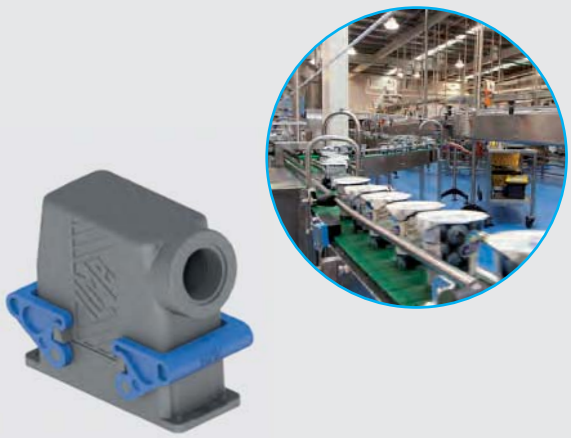

T-TYPE/C - LOW TEMPERATURE APPLICATIONS

SUM-UP

- **Enclosures in thermoplastic material, dark grey RAL 7012**
- **The Hygienic T-TYPE/C Series enclosures have been specifically designed for food and beverage ambient temperature as low as -50 °C (range: -50 °C / +70 °C)**
- **Enclosures in thermoplastic material, dark grey RAL 7012 colour, with high thicknesses providing structural solidity and durability**
- **IP66 and IP69 degree of protection according to EN 60529**
- **This version differs from the Hygienic T-TYPE/H one for the sealing gaskets made by in accordance with FDA Guideline 21 CFR §177.2600**
- **ILME T-TYPE/C series enclosure materials have been selected according to EU n. 10/2011 regulation requirements and each component has been tested according to EU regulation n. 10/2011 and EC regulation n. 1935/2004**

NOTE: As the characterizing elements of the Hygienic Series are the different sealing gasket material and the different locking lever, hoods and covers without sealing gaskets and locking levers are the same of series T-TYPE Standard.

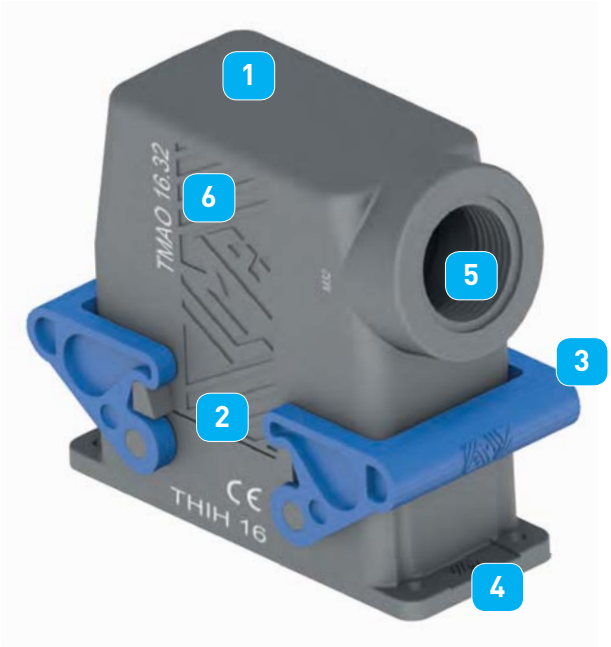

HYGIENIC

T-TYPE/H & T-TYPE/C

FOCUS ON:

1 Construction

By using the BC-MUL® moulding technique together with the use of MIL.BOX® material, **these enclosures are structurally solid and mechanically robust**, due to their increased thickness.
They are particularly resistant to the main pollutants present in industrial environments. The lever enclosure pegs are built into the enclosures.
The means for fastening the connectors to the enclosures consist of four M3 threaded metal inserts. Compared with metal construction enclosures, which – in order to comply with electrical installation safety norms– must be earthed via a metal connection to the protective earth terminal of the connector insert inside the enclosure, this series of enclosures offers a solution for **total insulation constructions** ⧈ (equivalent to class II) where necessary.
The thermoplastic material used is RAL 7012 dark grey colour and has passed **glow wire** testing (GWEPT) in accordance with the EN IEC 60695-2-11 at **850 °C**, in excess of what required by the intended uses.
The surface mounting, high construction housings are supplied with an open threaded entry and diametrically opposite a closed threaded entry which can be opened by the user if required (with suitable tool).

2 Gaskets

Gaskets have been produced in **HNBR rubber or SILICONE rubber** and have been incorporated in the base flange on bulkhead mounting housings for easier installation.

3 Levers

The locking levers have been produced in **self-extinguishing thermoplastic material,** blue RAL 5015 colour.
In accordance with the requirements set forth in **EHEDG Guideline n. 32** "Materials of construction for food equipment in contact with food" (EHEDG = European Hygienic Engineering & Design Group), the closing levers and sealing gaskets are coloured blue to easily identify any accidental contaminations in food products and to facilitate the visual identification of their complete cleanliness.

4 Dimensions

The internal dimensions allow mounting of all connector inserts in their relevant sizes. The external dimensions of the bulkhead mounting housings are similar to those of the corresponding metallic enclosures; hole fixing centres are unchanged. Hoods offer an inner cabling space similar to that of the "high" construction models of the corresponding metal enclosures. Other characteristics are in compliance with the applicable safety standard for electrical connectors, **IEC/EN 61984.**

5 Cable entries

The housing and hood cable entries are available with metric thread, respectively:

- **M25 or M32** for smaller sizes "44.27" and "57.27".
- **M32 or M40** for larger sizes "77.27" and "104.27".

The recent standard **IEC/EN 61076-7-100** regarding metric cable entries for multipole electrical connectors for heavy duty uses, which standardises some main dimensions for entries and their related accessories (gaskets, pressure nuts), have been carefully considered in the product design.

6 Markings

Each enclosure carries its own part number and conformity markings.

PE optional earth jumpers

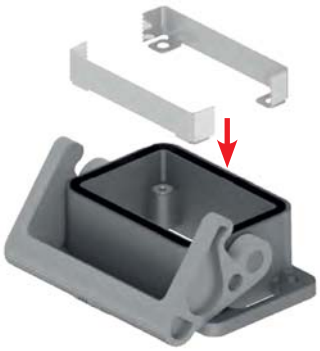

description	part No.
galvanized brass, to be optionally used with T-TYPE enclosures series:	
for inserts “44.27” size	**CR 06 BPE**
for inserts “57.27” size	**CR 10 BPE**
for inserts “77.27” size	**CR 16 BPE**
for inserts “104.27” size	**CR 24 BPE**

CR...BPE accessories PE (protective earth) jumpers could be mounted under the connector inserts for the connection of the two insert’s PE plates.

To guarantee to proper alignment of the insert inside the enclosure, it is necessary to use both jumpers supplied (in the same housing or hood); the jumpers are not usable individually.

Furthermore the user is responsible for verifying the continuity of the PE connection ⏚ (male and female) independently of using CR...BPE earth jumpers.

Optional earth jumpers

dimensions shown in mm are not binding and may be changed without notice

W-TYPE

ENCLOSURES for aggressive environments

A cornerstore against corrosion

Series W-TYPE connector enclosures for aggressive environments is specially designed for industrial applications where particularly aggressive external agents are present (e.g. salty environments, etc.).

The range includes enclosures in the 7 basic sizes (size 21.21 for CKA..W and MKA..W models, sizes 44.27, 57.27, 77.27 and 104.27 for CH..W, CA..W and MH..W, MA..W models, sizes 49.16 and 66.16 for CZ..W and MZ..W models) and in the 3 double sizes (sizes 66.40 also known as 50 poles, 77.62 a.k.a. 32 poles, 104.62 a.k.a. 48 poles).

Series W-TYPE enclosures may be bulkhead mounting, surface-mounting or hood type with side or top entry. They are distinguished by the jet black RAL 9005 colour and have the following characteristics:

- chromate conversion treatment of castings RoHS 2 compliant, providing 50% improved corrosion in resistance in salt spray tests (according to UNI EN ISO 9227) compared to the previous green coloured versions;
- thermosetting epoxy powder coating (with improved resistance to chemicals compared to epoxy polyester of the standard enclosures series);
- FKM fluoroelastomer gaskets (with improved resistance to chemicals and aging);
- ambient temperature limits from -40 °C to +125 °C.

Other constructional characteristics are:

1) CKA..W and MKA..W series

- 21.21 inserts size
- stainless steel monoblock locking lever

2) CH..W, CA..W and MH..W, MA..W series

- 44.27, 57.27, 77.27, 104.27, single inserts sizes and 77.62, 104.62, 66.40 double inserts sizes;
- CLASS type locking levers (stainless steel lever body, springs and pins, lever handle by fibreglass reinforced thermoplastic material);
- stainless steel riveted pegs;
- supplementary insulation inside enclosures.

3) CZ..W and MZ..W series

- 49.16, 66.16 inserts size;
- stainless steel monoblock locking lever (body, handle, springs), rolls and pins;
- stainless steel riveted pegs;
- supplementary insulation inside enclosures.

Series W-TYPE enclosures are approved by UL with c UL us Recognized Component mark for USA and Canada, with protection type ratings UL Type 4 (= NEMA 4), UL Type 4X (= NEMA 4X) and UL Type 12 (= NEMA 12) according to the American standard ANSI/UL 50 and ANSI/UL 50E and the corresponding Canadian Standards CSA C22.2 No.94.1 and CSA C22.2 No.94.2.

Upon connector complete and fitted with suitably rated cable glands or conduit fittings, series W-TYPE enclosures guarantee a degree of protection IP44 (for size 21.21, IP66/IP67 using CKR 65(D) kit), or IP66 (all other sizes) as well as IP69 according to EN 60529 (the IPX9 test recently added to this standard covers resistance to high pressure and temperature water jetting, jets applied at 80 °C (± 5 °C) at a pressure of 80 bar to 100 bar, 30 s for each angle of inclination 0°, 30°, 60° and 90° with reference to the horizontal plane).

Series W-TYPE enclosures can accommodate all connector inserts with either crimp, screw, spring or the innovative SQUICH® connection.

Series W-TYPE enclosures, being not equipped with internal tabs and thanks to the additional insulation strips placed inside, are also suitable for series CME 830V rated inserts.

gasket and screw kit for IP66/IP67/IP69 [1] specific for CD 08 inserts	**CKR 65 D**	**CKR 65 D**

[1] To obtain the IP66/IP67/IP69 degree of protection, a kit with insert fixing screw and gasket can be purchased separately.
Several inserts size “21.21” are already supplied with fixing screw and gasket, which ensures IP66/IP67/IP69 degree of protection. See list below, not including any special version:
- CQF/M 07, CQF/M 12
- CJ KF/M
- CJK 8FT /8IFT /8MT /8IMT, CJK 8M
- CUK 2FT /3FT
- CX 1/2 BDF/M
- CLK 04 SCF /SCF-H /SCM
- CXL 2/4 PF /PM /PFH /PMH /SF /SM, CXL SF/M

NOTE: Housing type may vary upon specific part No.

E-Xtreme® series
TECHNICAL FEATURES

The protection is granted also in case of impact with stones and sand. The materials are able to withstand UV radiations, a wide temperature range and harsh chemicals.

The E-Xtreme® series is available in the **full range** of ILME aluminum hoods and housings versions.

Applicable test standards

EN 61984:2009-06	Connectors - Safety requirements and tests
EN 60529: 1991 + A1: 2000 + A2: 2013	Degrees of protection provided by enclosures (IP code)
EN ISO 9227: 2012	Corrosion tests in artificial atmospheres - Salt spray tests
ASTM B117-16	Standard practice for operating salt spray (fog) apparatus
EN 60512 (series)	Connectors for electronic equipment - Tests and measurement
EN 60068-2-68: 1996	Environmental testing - Part 2-68: Tests - Test L: Dust and sand
EN ISO 20567-1: 2005	Paints and varnishes -- Determination of stone-chip resistance of coatings -- Part 1: Multi-impact testing

General specifications

Material	Aluminum die-cast
Painting	Epoxy powder coating
Colour	RAL 7016 (dark grey)
Locking lever, springs and pegs	Stainless steel
Lever handle	C-TYPE lever: Polyamide V-TYPE lever: Stainless steel
Gasket	FKM
Silicone-based compounds	Free (except version for -60 °C... +180 °C)
EN ISO 9227: 2012	3.000 hours (V-TYPE lever and hood with moulded pegs) 2.000 hours (C-TYPE lever and hood with riveted stainless steel bolts)
Temperature limits	-40 °C... +125 °C (-60 °C... +180 °C with silicone gasket)
Degree of protection according to IEC/EN 60529 (in mated and locked condition)	IP44, IP65/IP69, IP66/IP69, IP66/IP67/IP69, IP66/IP68/IP69
Stone chipping test	ISO 20567-1
Dust and sand blasting test	EN 60068-2-68
Vibration test	EN 61373 cat. 1B, 3 axis EN 60068-2-6 10÷500 Hz 0,35mm/5g break point 60, 1 Hz 3 axis
Shock test	EN 61373 cat. 1B, 3 axis
UV resistance	EN ISO 4892-2, EN 50467 on locked housings
Ozone resistance	EN 50467 on locked housings
Chemical resistance	Cleaning fluids, anti-freezing fluids, mineral and synthetic oils, cooling fluids, diesel fuel

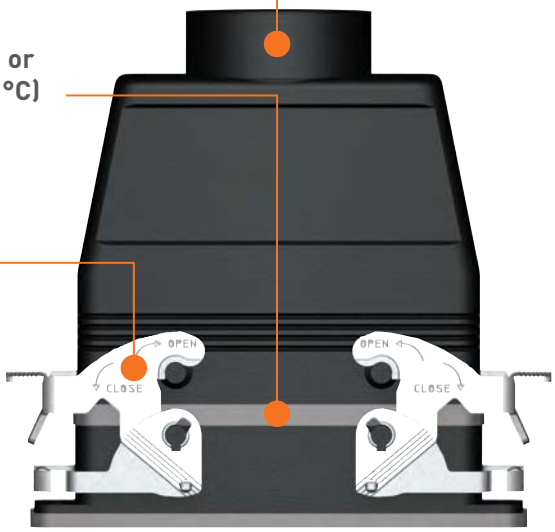

E-Xtreme® series

ADVANTAGES

Metal hoods and housings intended for **extremely demanding environments,** with special protective treatment under painting.

Their **special patented protective coating** assures a high level of protection against the corrosion even in case of long term exposure to salt mist.

- **3.000 hours in salt spray tests**
- **IP66, IP67, IP69** degree of protection (EN 60529)
- corrosion-proof aluminium with a **special coating** under the powder painting colour **RAL 7016 dark grey**
- **FKM** gasket (-40 °C...+180 °C) or **silicone** gasket (-60 °C...+180 °C)
- **V-TYPE lever or C-TYPE lever,** hoods with moulded pegs or riveted stainless steel bolts
- **durable protection** against damage caused by stone chip, icing, salt mist, UV radiations and harsh gases

- icing
- very low temperatures
- salt mist
- impact resistant
- UV radiations
- chemical resistant

panel cut-out for bulkhead mounting housings

M7PE L - M7APE L

type	A	B	C	D
M7PE 06 L	53	40	52	70
M7APE 06 L	74	45	57	72,5

For bulkhead mounting housings, IP66/IP67 degree of protection is guaranteed for mounting on a sufficiently rigid panel; use suitable length M4 screws (negligible surface buckling when subjected to tightening couple on the fixing screws of 0,8 - 1,2 Nm or deformation caused by the weight of the complete connector).
In case of insufficient rigidity use of C7.. FL counterflanges (page 443) is recommended, in which case use suitable length M4 screws and M4 (on the enclosure) and M4 (on the counterflange) flat/spring washers with M4 locknut.
In addition, the panel surface in contact with the counterflange gasket of the bulkhead mounting housings must be free from defects (deep scratches, grooves, burrs) that could negatively affect the performance of the gasket.

EMC

Directives and standards

The concept of **Electromagnetic Compatibility** (EMC) is the reversal in the positive sense of what was until recently known as **Electromagnetic Interference** (EMI): **we have electromagnetic compatibility** between a device and the environment (including surrounding equipment) when there is no reciprocal electromagnetic interference or when this is within tolerable limits.

In other words, **to obtain electromagnetic compatibility,** measures must be adopted aimed at bringing the electrical or electronic equipment to levels of **emission** and electromagnetic **immunity** against electromagnetic interference such that it continues to function properly without causing disturbance to other equipment present in the surrounding environment.

In the electrical equipment of industrial machines, rectangular multipole connectors with their metallic enclosures are widely used due to their high standards of safety, reliability, mechanical robustness and resistance to corrosion and pollution.

These connectors are passive electromechanical components: they do not generate electromagnetic interference and are not disturbed in their function. Taken by themselves, therefore, they fall outside the scope of Directive 2014/30/EU on electromagnetic compatibility and the CE marking is therefore not required for EMC aspects: it still applies, however, under the Low Voltage Directive 2014/30/EU.

It is rather the devices and industrial equipment mentioned above, in which the connectors are for the most part used (e.g. on-board electric panels) which, taken as a whole, must be CE marked also for EMC aspects, having to meet the essential requirements of the EMC Directive.

For the EMC in **industrial environments** two European standards are in force, not intended for specific equipment, which regulate the **emissions** and **immunity** of devices.

These are therefore generic standards, one for **emissions EN 61000-6-4**:2007 + A1:2011 (class. CEI 210-66:2007 + 210-66;V1:2011, equivalent to IEC 61000-4:2006 + A1:2010) and one for **immunity EN 61000-6-2**:2005 (class. CEI 210-54:2006, equivalent to IEC 61000-6-2:2005) [1)].

These apply in the absence of provisions in the particular EMC product standards or in the total absence of the latter.

For industrial equipment, when appliances are not intentionally designed to generate radio frequencies[2)], the latter case applies (no particular standards). In the European standards for switchgear and controlgear (EN 60947-1) and in those for the electrical equipment of machines EN 60204-1 emission and immunity limits have been for some time in the process of being issued, as well as their verification, if necessary, with reference to above mentioned EMC standards for industrial environment.

EMC testing should not be performed on individual components, but rather on the entire apparatus, sometimes not without inconsiderable logistical difficulties, due to their size, reproducing as far as possible their operation in real operating conditions.

It is therefore incorrect to assign limits of electromagnetic emission and immunity imposed on the equipment on, for example, electrical connectors used as components of the equipment.

*1) There are two similar standards for the other standardized environment, defined as **residential, commercial and light industrial environment**, respectively EN 61000-6-3:2007 + A1:2011 (class. CEI 210-65:2007 + CEI 2010-61;V1:2011) for emissions (equivalent to IEC 61000-6-3:2006 + A1:2010) and EN 61000-6-1:2007 (class. CEI 210-64:2007) for immunity (equivalent to IEC 61000-6-1:2006).*

2) In which case for such devices, called ISM (industrial, scientific, medical) the – EN 55011:2007 standard for emission of radio interference would apply.

Electromagnetic interference and ILME connectors

Many years ago the entry into force of the first EMC European Directive, with requirement for electrical and electronic equipment to comply with the levels of electromagnetic pollution dictated by the standards, brought renewed interest in all the appropriate steps to mitigate the effects of electromagnetic interference.

Electromagnetic interference can occur in two forms: **conducted or radiated**. With reference to connectors, **conducted interference** transmitted on conductors wired to the connectors, is, for example: harmonics, superimposed on the voltage of the power supply at 50 Hz, caused by withdrawal of biased current or by electromechanical or electronic switches, or radio frequency interference noise which is inductively or capacitively coupled with the cable, overlapping transported signals.

This is characterized by frequency and amplitude (intensity) and can be filtered to some extent, in both in the outgoing (emission) and incoming (immunity) directions, only via in-line passive electrical filters, which the designer of the electrical equipment must foresee since he is the only one with a knowledge of all the terms of the problem [3].

Radiated interference, transmitted in the form of electromagnetic waves, is characterized by the values of amplitude of associated electric (V/m) and magnetic fields and with the frequency or frequency band (rarely is this located on a single frequency, more often it occupies a band). This may come from inside the device: in this case it is necessary to mitigate emissions. Or from the outside, in which case it is necessary to raise immunity.

By test convention, **interference with frequency up to 30 MHz** is considered to be conducted and **irradiated with frequency above 30 MHz up to 1 GHz.**

The sources of electromagnetic interference are classified as **intentional** and **unintentional**.

The first (e.g. radio-telecommunication antennas, mobile phones) use high frequency electromagnetic fields for functional reasons. For the second (e.g. ignition of internal combustion engines, electric arc furnaces) they are a by-product.

In most industrial applications, compared to the overall EMC issues of a device, connectors (inserts + enclosures), taken by themselves, are not the priority concern of the designer.

The enclosures of the low-frequency industrial connectors, taking shape as a barrier to a “shell”, are implicitly a “peripheral” aspect: the designer of electrical equipment / electronics will take care first of all the “core” of the EMC problem, that of the active components tinside of their systems, by limiting the emissions and enhance immunity.

In fact, to have significant problems due to radiation through the opening constituted by a connector enclosure on a control panel, there must be a particularly “efficient” radiofrequency source inside the panel.

Essentially, significant design errors must have been committed regarding the EMC of the entire equipment.

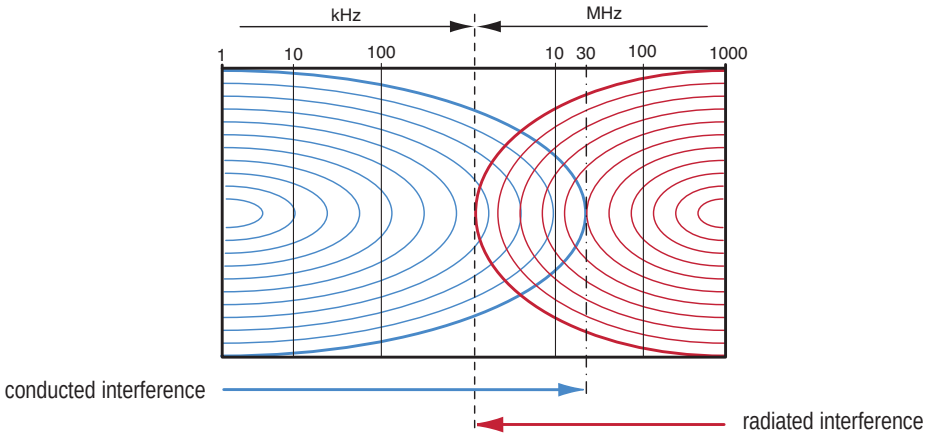

In certain cases the coupling of connectors may constitute the weak link in the chain, for example where it is not possible for functional reasons to further reduce interference of the electronics inside the control panel. In these cases one must rely on the efficiency of the shield. Even if the equipment manufacturer uses shielded fabrication and high quality shielded cables, continuity and homogeneity of such shielding could be significantly degraded precisely in the passage between free connector and panel.

In dealing with electromagnetic compatibility of electrical equipment of an industrial machine, a second aspect to be addressed as a priority is the presence of large quantities of interface cabling.

In these cases, the significant attenuation of the shield necessary for the cables must not be jeopardised by the connector enclosures due to imperfect earthing of the cable shield.

It should nevertheless be pointed out that increasing shielding may not be sufficient to solve possible problems and should be considered as a complementary choice.

[3] *For example, for trapezoidal D-Sub type connectors for digital data transmission, there are connectors on the market which incorporate “general purpose” filters for any conducted interference.*

Electromagnetic shielding of connectors: fundamental principles

To consider the electromagnetic compatibility aspects of an electrical/electronic device in the final verification rather than in the design phase almost always leads to a substantial increase in overall development time and costs.

The designer who deals with electromagnetic compatibility issues should use the same rules and the same precautions regardless of whether the equipment is subsequently shielded.

Numerous products meet electromagnetic compatibility standards without the use of shielding. However, when all other limiting interventions are impossible or uneconomical, recourse to increased efficiency of the electromagnetic shield is the only answer.

An **electromagnetic shield** is a barrier to the transmission of electromagnetic fields.

To generalise the concept to include conducted emissions, a filter can be considered as a shield. We will restrict ourselves here to considering a shield as a barrier to radiated emissions.

The metallic containers which completely enclose an electrical/electronic device or a part thereof **constitute an electromagnetic shield**, with the task of preventing the emissions of electrical/electronic devices or a part thereof to radiate outside the equipment container itself.

A cable connected to a device is part of the same for the purposes of electromagnetic compatibility.

A flexible multicore cable is shielded by surrounding the insulated conductors with a conductive metal mesh.

An electromagnetic shield is characterized by a parameter which measures its efficiency.

The shielding attenuation is the ratio between the radiated power generated inside a device and the residual radiated power outside the unit. The attenuation introduced by a shield can be measured by comparing the absence and presence of the shield.

Shielding attenuation is measured in dB (decibel). 20 dB is equivalent to an order of magnitude, i.e. attenuation of a factor of 10, 40 dB = attenuation of a factor of 100, etc.

To obtain large shielding attenuation values (e.g. 100 dB) the shield must completely enclose the electronic device and not have any means of access from the outside, such as openings, joints, cracks or cables. Any means of access through a shield, if not properly treated, can drastically reduce the efficiency of the shield.

The passage of a cable through a shield must be properly considered. One common method is to place filters on the cable at which it crosses the shield. Another is to use shielded cables, with their shields connected for the entire perimeter to the equipment shield.

To reduce radiated emissions of a cable, the cable shield must be connected to a point with zero potential (an ideal ground therefore, not the “signal” ground of an electronic circuit).

To achieve electromagnetic shielding conductive materials (metals) are used.

Shielding attenuation depends mainly on the electrical conductivity of the material and the thickness of the shield.

Rectangular or square connectors – special case – intrinsically *anisotropic*, are more difficult to shield and less predictable in behaviour than circular connectors (isotropic geometry) used, not by accident, with coaxial terminations for RF applications.

Connector enclosures are typically made of aluminium die cast alloy, an excellent metal for shielding electric fields because it is an excellent conductor. It is also better than steel in shielding phenomena of an impulsive nature (typical example is electrostatic discharge) which cause interference in the high frequency spectrum and is among the most insidious and dangerous.

It is important to ensure electrical continuity along the boundary of the enclosure, not only to ensure high shielding attenuation but also to avoid accumulation of static electricity.

It is important not to “economically” tip the balance of a screening system which is only as effective as its weakest component.

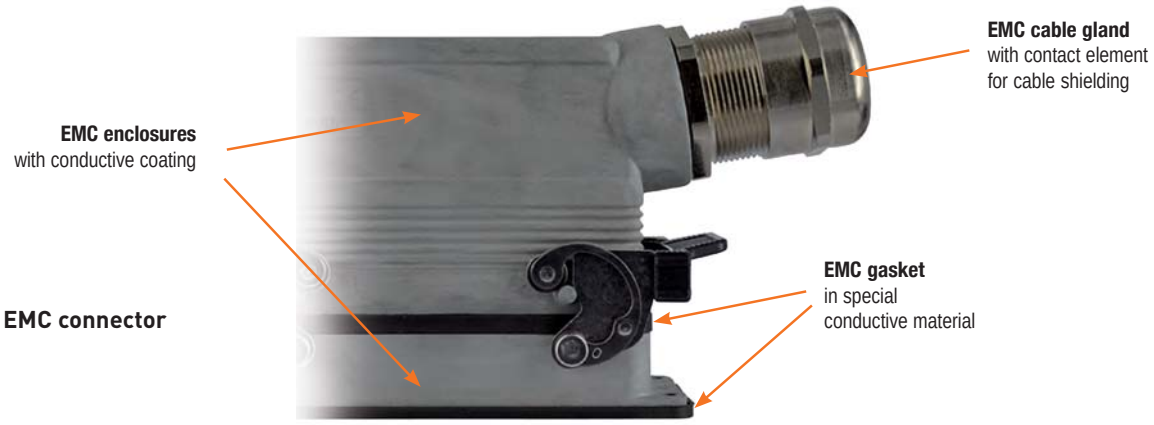

A good shielded cable has a shield attenuation greater than that attributable to the connector, but only for very small lengths of cable (e.g. one metre). When the length of the shielded cable increases, shield attenuation is significantly reduced.

This indicates that it is much more important to improve the shield quality of cables, which are mainly responsible for radiated interference emissions and in an electrical system are often present in considerable quantity, before that of the connector.

What dramatically increases the efficiency of shielding is the quality of its connection to the conductor: EMC cable glands create a very homogeneous and continuous contact between the cable shield and connector enclosure.

EMC connector enclosures and accessories

In light of the foregoing, ILME has developed for the designers of the electrical/electronic equipment of machines the new series of EMC connector enclosures and accessories.
Available as bulkhead mounting housings and hood versions in the various sizes 44.27, 57.27, 77.27 and 104.27, they maintain the robustness and reliability of standard types whilst possessing increased high frequency shielding characteristics.
In the development of EMC enclosures recourse to geometrical modifications compared to the standard versions has been avoided so as not to affect their dimensional compatibility with the latter: in using EMC enclosures the equipment designer need not foresee any changes in layout due to increased dimensions and need not renounce the convenience of the traditional locking lever closures.
The increase in shielding attenuation is achieved primarily by providing a homogeneous and as uniform as possible electrical continuity of earthing to the cable shield in the connection between cable and hood and between hood and housing.
At the contact between the bulkhead-mounting housings and the fixing surface a special conductive gasket is foreseen.

The enclosure surfaces are treated to make them extremely conductive while maintaining the necessary corrosion resistance.

The bulkhead mounting housing has a special conductive gasket.

For best results the surface underneath the gasket should be conductive. Since the use of this enclosure system presupposes the use of shielded cables, the hood should comprise a special cable gland with anchoring device for the cable shield.

These metal cable glands ensure IP66 protection rating, are resistant to corrosion and equipped internally with a contact element with geometry that ensures uniform earthing of the cable conductor shield on the metal shell of the hood.

Even with standard enclosures (not EMC), the contact with an EMC cable gland between the cable shield and the connector housing, permanently earthed through to the connector insert inside, produces an attenuation of electromagnetic interference on average higher (by approx. 6 – 15 dB up to 600 MHz, corresponding to a factor of 2 – 5,6) than the attenuation achieved by connecting the shield mesh directly to the earth terminal of the connector insert.

The reasons for this are:

- the uniform 360° contact via the contact device of the EMC cable gland avoids what instead happens when the shield mesh is earthed to the earth terminal of the connector, i.e. the discontinuity of the shield which necessarily opens precisely around the connector;
- more efficient distribution of induced current circulating on the shield mesh;
- directly involving the metal shell constituted by the enclosure avoids transmitting interference to the connector, as happens when the shield is connected to the earth terminal of the connector.

Experimental tests

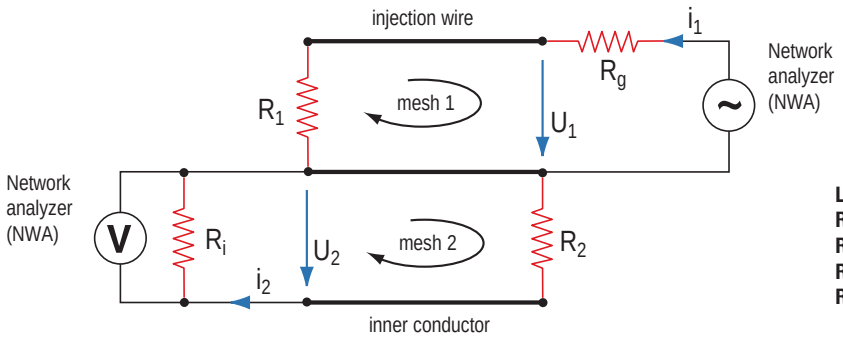

Tests for measurement of the shielding of ILME special EMC enclosures for multipole rectangular connectors for industrial use were conducted at the CESI EMC Laboratory in Milan, national notified body for certification under the EMC Directive. Shielding attenuation of a component is defined as the ratio of the power radiated within the component and the maximum interference power outside the component in the room (**VG 95214-11**).

For a connector it can be expressed, in analogy with cables, as a function of transfer impedance, which is the ratio between the voltage induced in the shield and the current flowing outside the same. The transfer impedance measurement is a widely used and accepted method to determine shielding attenuation of coaxial cables and connectors.

Only recently, due to the increase in digital data transmission speeds and the increase in frequencies of transmitted signals, the issue of identifying efficient and repeatable methods for measuring shielding efficiency, also for connectors traditionally considered low frequency, has been addressed at a regulatory level.

An experimental method for determining surface transfer impedance of coupled low frequency connectors is still being studied by IEC.

The method chosen by ILME for verification of its system of EMC enclosures and accessories is the **line injection method** based on German military standards **VG 95214-10** and **VG 95214-11.**

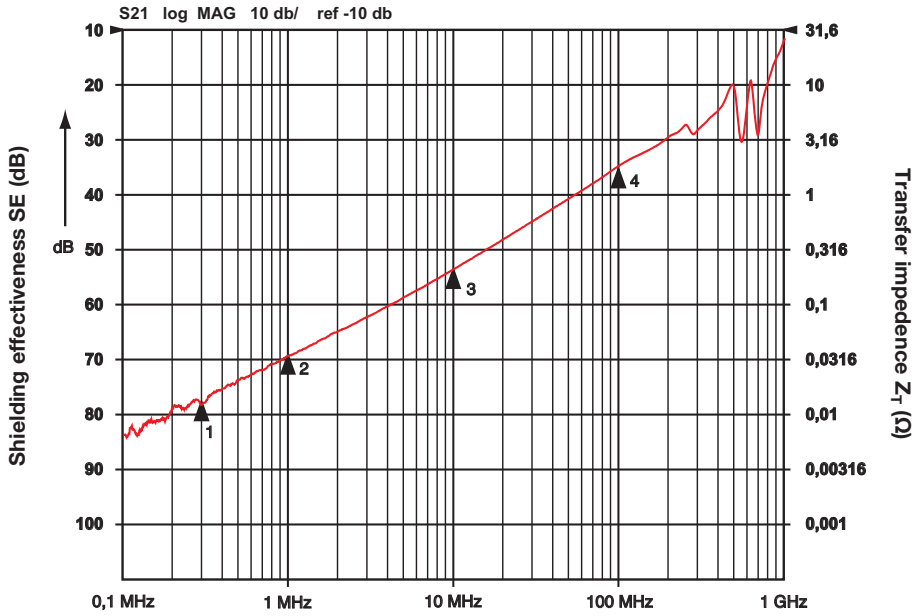

Legend:
R_g = output impedance of the signal generator (NWA port1)
R_1 = termination resistance of the generator circuit (mesh 1)
R_i = input impedance of the measuring instrument (NWA port 2)
R_2 = termination resistance of the generator circuit (mesh 2)

A signal with a frequency of 0,1 MHz to 1000 MHz generated by port 1 of the measuring device (a network analyzer with 75 Ω output impedance) circulates in the mesh 1 consisting of an insulated conductor (injection wire) resting on the surface of two coupled enclosures (shield), terminating on a calibrated (and shielded) resistance of 75 Ω. As a result of the current i_1 injected in the mesh 1, an induced voltage U_2 is generated in the mesh 2, consisting of an inner pick-up conductor connected to two contacts at the center of the connector inserts, terminated on another calibrated resistance of 75 Ω (shielded), in turn earthed on the coupled enclosures which act as a shield. The voltage is measured on port 2 of the measuring device for S parameters (scattering parameters). The network analyzer sees the device under test as a filter and calculates the measurement providing a graph illustrating the shielding attenuation (measured in dB) as a function of frequency in MHz.

The tests were performed on:
- coupled standard enclosures
- coupled EMC enclosures

The results are summarized in the diagrams below.

Figure 1 - Standard enclosure diagram

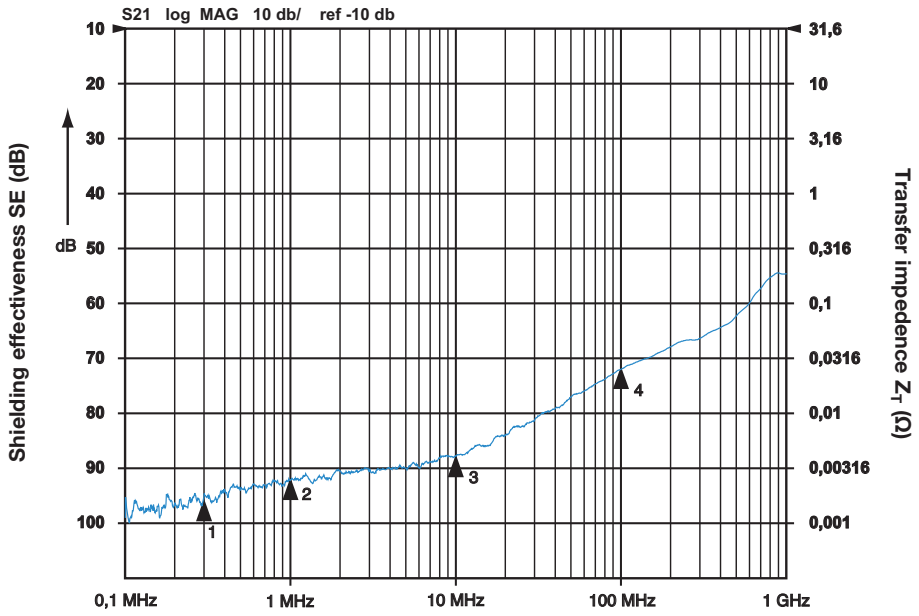

1_:-78.167 dB
300 kHz

2_:-69.369 dB
1 MHz

3_:-53.543 dB
10 MHz

4_:-34.719 dB
100 MHz

Figure 2 - EMC enclosure diagram

1_:-93.988 dB
300 kHz

2_:-91.86 dB
1 MHz

3_:-87.557 dB
10 MHz

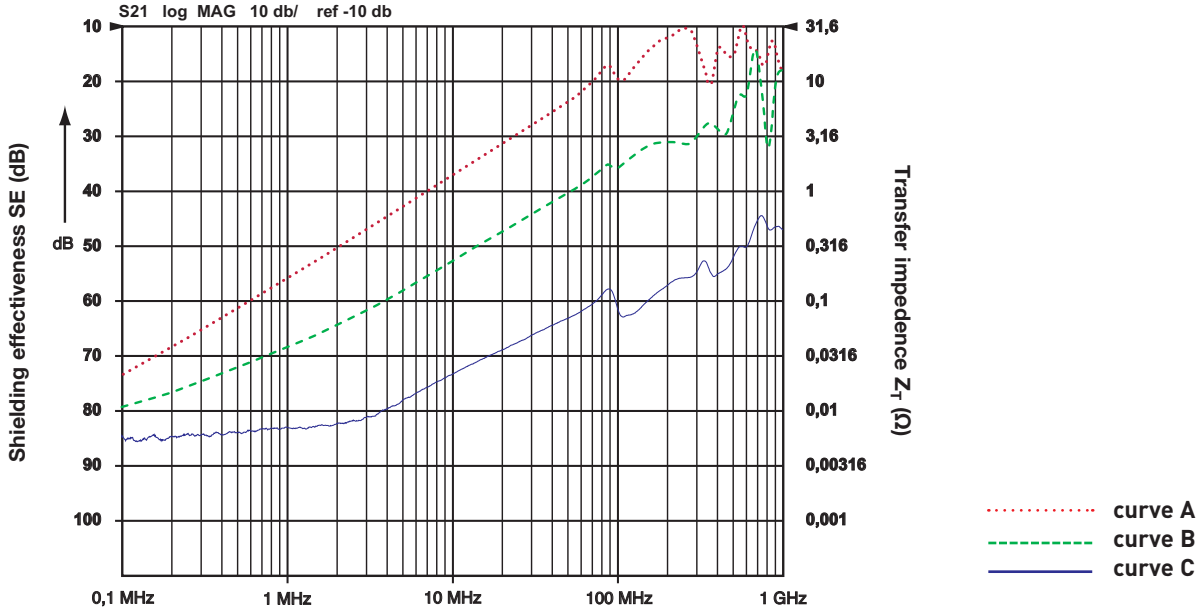

4_:-71.649 dB
100 MHz

To highlight the influence of the cable gland the shielding attenuation measurements were repeated on:

- coupled standard enclosures with standard cable gland and cable shield earthed to the earth terminal of the connector
  see curve A
- coupled standard enclosures with EMC cable gland and cable shield earthed to the cable gland
  see curve B
- coupled EMC enclosures with EMC cable gland and cable shield earthed to the cable gland
  see curve C

The results are summarized in the diagrams of Figure 3 below.

Figure 3 - Overview diagrams

NOTE
For the relationship between Shielding effectiveness SE and Transfer impedence (Ω) see also IEC 60512-23-3: SE = 40 - $20_{log}10Z_T$ (dB)

Conclusions

The measurements suggest the following considerations:

- standard enclosures already provide good levels of shielding attenuation;
- when used with EMC cable glands, standard enclosures clearly increase their shielding attenuation;
- EMC enclosures, with better shielding attenuation values, provide further improvements.

1) To obtain the IP66/IP67/IP69 degree of protection, a kit with insert fixing screw and gasket can be purchased separately.
Several inserts size “21.21” are already supplied with fixing screw and gasket, which ensures IP66/IP67/IP69 degree of protection. See list below, not including any special version:
- CQF/M 07, CQF/M 12
- CJ KF/M
- CJK 8FT /8IFT /8MT /8IMT, CJK 8M
- CUK 2FT /3FT
- CX 1/2 BDF/M
- CLK 04 SCF /SCF-H /SCM
- CXL 2/4 PF /PM /PFH /PMH /SF /SM, CXL SF/M

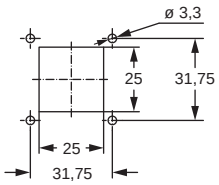

NOTE: Housing type may vary upon specific part No.

EMC

180 °C

The heat shield

Series specifically developed for industrial applications where the ambient temperatures are particularly harsh (from -40°C to +180°C).

Available in the sizes “21.21”, “44.27”, “57.27”, “77.27”, “104.27” and “104.62”, to be used in combination with the available connector inserts suitable for high temperatures up to **180 °C** made by self-extinguishing thermoplastic material (>PPS< polyphenylene sulphide).

All these enclosures except those sized “21.21” have supplementary insulating strips inside.

This enclosure series is distinguished by the red colour.

- c UL us certified for USA and Canada for **Type 12** (indoor use), **Type 4** and **Type 4X** (outdoor use) (equivalent to NEMA 12, 4, and 4X and) protection ratings, marked on the packaging label. **IP44** (size “21.21”), **IP65** (other sizes) degree of protection according to **EN IEC 60529**.

SUM-UP OF MATERIALS USED

- **Enclosure body made of die cast aluminium alloy**
- **Chromate conversion coating, RoHS 2 conform, on the enclosure body die casts**
- **Coated with special high temperatures resistant, red coloured thermosetting powder**
- **Flange and interface sealing gaskets (as applicable) in FPK, anti-aging heat resistant fluoroelastomer**
- **Locking device with lever(s), springs and pegs in stainless steel**
- **Single-block locking lever handles in stainless steel (for “21.21” sized CKA...R/ MKA...R, “44.16” sized CZ...R and MZ...R, and “104.62” sized CH...R 48 ... and, MH...R 48 ... versions)**
- **Locking lever handles in die-cast aluminium alloy with the same special coating as the enclosure body (for CH...R 10, 16, 24 and MH...R 10, 16, 24 versions)**

HNM series

In and out

Housings (bulkhead-mount or surface mount) equipped with **V-TYPE single locking lever** with special **anti-friction treatment**

to be mated to

Hoods with **riveted anti-friction pegs**, that facilitate the frequent opening and closing.

This **HNM** series of connector enclosures has been developed to be used in combination with the **HNM** series of multipole connector inserts equipped with relevant **HNM** series of removable crimp contacts, to provide the same reliable protection of the standard series but for a consistently extended, **high number of matings.**

When the number of 500 mating cycles guaranteed life of standard connector hoods and housings is insufficient to provide a reasonably long life span in those connector applications that by function are foreseen to be subject to very frequent connections and disconnections, it is necessary to opt for a solution able to increase that guaranteed lifetime.

The **HNM** series of connector enclosures achieves this goal, extending the guaranteed number of matings up to 10 000.
The locking means, comprising both the locking lever and locking pegs are chosen and treated so as to reduce wear due to friction at minimum, thanks to the use of the clever proprietary design of the **V-TYPE locking lever**, that already in standard enclosures is able to provide extremely reduced wear on the corresponding locking pegs, producing a very limited friction, furtherly reduced by the application of a special anti-friction lubrication treatment.

The counterpart hoods for locking on the long side are already provided by riveted anti-friction rolling pegs, as well furtherly improved by the special anti-friction lubrication treatment.

CAUTION: As the frames are floating, **the PE earthing connection of the metal surfaces on which they are mounted** (mounting bases) **must be performed separately** and cannot be done by connecting the PE earthing contact to the corresponding connector inserts.

NOTE: The supply includes 1 frame and 4 shoulder screws with cylindrical head and notch to fix the frame in place.

For use with MIXO inserts CX 04 X, please contact ILME S.p.A.

[1] Except CT, CTS and CTSE

Technical specifications
- materials:
  - floating frame, inserts: stainless steel
  - fixing screws: zinc-plated steel
- mechanical endurance: up to 10.000 cycles with HNM inserts
- compensation range:
  - x axis: ± 1,5 mm
  - y axis: ± 1,5 mm

Characteristics
- Suitable, depending on size, for all standard and MIXO connector inserts and frames, except series CT, CTS and CTSE.
- Designed to be used in the transportation, printing and power electronic industries (for example boxes for rack cabinets) and in all industrial applications that require, during assembly or maintenance, the connection of connectors without possibility of controlling the alignment.
- Enables the **self-centring coupling of two corresponding** connectors without the use of enclosures; they freely move on their base plate (± 1,5 mm on both axes) ensuring the **alignment of the coupling**.

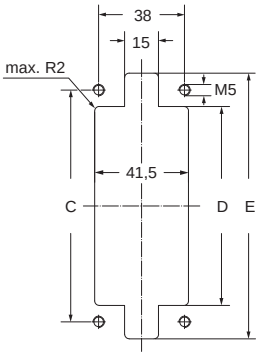

[2] distance for electric and fibre optic contacts: max 27 mm;
distance for pneumatic contacts: max 26,5 mm.

CENTRAL LEVER series

Easy access for robotics

Series specifically designed for industrial applications with limited installation space.

These enclosures can be installed, placed side-by-side and handled in a single operation.

Furthermore, the lever's shape reduces the effort required to uncouple the inner fittings.

SUM-UP OF MATERIALS USED FOR CH..YC, CA..YC and MA..YC, CA..YX and MF..YX series

- **Made of die cast aluminium alloy**
- **With epoxy-polyester powder coating**
- **Gaskets in anti-aging, oil-resistant, grease-resistant and fuel-resistant vinyl nitrile elastomer**
- **Locking device with single stainless steel lever**

Locking device for single stainless steel central locking lever

- **locking device,** made in **stainless steel,** with **proprietary design,** that can be easily placed on the side of the central lever of a “104.27” hood in order to lock the opening movement of the locking lever, thus avoiding any unwanted and potentially hazardous accidental opening of the connector coupling under working condition;

- **possibility to apply, optionally, a padlock (CR BLC622,** separately available, 6 mm shackle diameter, 22 mm arc clearance) with **anti-tamper function,** to secure the locking against any unauthorized attempt to open the locking lever and disconnect the connector coupling;

- **two versions available:**
  with eyelet cord end, **CR YLK24 (see page 667)**
  for the fastening to a housing of a central lever coupling when not in use;

  with “loop” cord end, **CR YLK24 SL (see page 667)**
  for the fastening to a hood when not in use (around the incoming cable).

LS-TYPE series

On stage

The **LS-TYPE** enclosures are the ideal solution for the entertainment industry (lighting system power supply and related mixer and dimmer panels), including theatre stages, film sets, radio and TV studios, discos, trade fair booths, concert halls and night public events, both indoors and outdoors, etc.

All parts are in elegant RAL 9005 black to make them suitable for situations and locations where they should not be visible in the dark.

Functional characteristics
For use with inserts in self-extinguishing thermoplastic material (PPS polyphenylene sulphide).

UL certified for USA and Canada for NEMA 4, NEMA 4X and NEMA 12 degrees of protection (enclosure type ratings) printed on the packaging.
IP65/IP69 degree of protection.

SUM-UP OF MATERIALS USED FOR CK..R, CZ..R, CH..R, CA..R and MK..R, MZ..R, MH..R, MA..R series

- **Made of die cast aluminium alloy**
- **Chromate conversion coating, RoHS 2 conform treatment of die cast**
- **Coated with special thermosetting powder coating with high resistant to high temperatures**
- **Gaskets in anti-aging FKM fluoroelastomer**
- **Locking device with levers, springs and pins in stainless steel**
- **Single-block locking levers in stainless steel (for CZ..R, CH..R 48 and MZ..R, MH..R 48 versions)**
- **Lever handles in aluminium with special die-cast coating (for CH..R 10, 16, 24 and MH..R 10, 16, 24 versions)**
- **Supplementary insulation inside enclosures**

Type 4/4X/12

EN 60529 IP65 IEC 60529

CGK/MGK (“21.21”) series
and CG/MG (“44.27”, “57.27”, “77.27”, “104.27”) series

CGK/MGK and CG/MG series of free and fixed enclosures (hoods and housings) for heavy-duty rectangular connectors combine water tightness to **IP68** according EN IEC 60529, the “versatile” complete IP degree of protection of these enclosures being actually IP66/IP68/IP69, high mechanical sturdiness and enhanced immunity to electromagnetic disturbances and shielding of the surrounding against emission (EMC features).

The enclosures ensure the highest degree of protection from external interferences; more specifically, they protect people from accessing the hazardous components housed inside the enclosures (protection against shock by direct contact) and they protect the internal connector inserts from the ingress of foreign matters (dust tightness) and from the harmful effects of ingress of fluids (water tightness).

The water tightness between the bulkhead-mounting housings and the panel is ensured by an O-ring seal held in position in a slot within the bulkhead-mounting housing base.

A second O-ring seal fitted around the mating edges of the enclosure ensures the water tightness between the free and the fixed enclosure when the connector is mated and locked.

To ensure the water tightness when the enclosure is fitted onto a cabinet panel, the optional mounting frame with four M6 threaded blind holes may need to be installed inside the panel.

The fastening screws must be fitted inside the enclosure and, through the fastening holes to be drilled on the panel, must be tightened onto the M6 mounting frame internal thread instead of the usual fastening nuts. The bulkhead-mounting fixed enclosure fastening holes have been drilled within the perimeter of the O-ring seal, in order to avoid having to use further seals.

Although these enclosures are larger than the standard enclosures, to leave more space for the cables, and the walls are thicker to achieve more mechanical robustness, the fixing points have remained the same as those of the standard enclosures. The series is offered with two types of locking systems: **bayonet** and **screw**.

The two closing points are located in asymmetrical positions on the short side of the housing so as to ensure an optimal water tightness while keeping the lowest footprint to allow more compactness in case of multiple enclosures placed one close to the other on the short side. The locking means of both versions are made of high quality stainless steel and are firmly fastened inside the free enclosure. These locking means can be fitted and removed by using either a 1,5 mm flat blade screwdriver or a 10 mm hexagonal key. The fixed and free enclosures of series CG/MG are made of foundry grade aluminium alloy, particularly resistant to seawater corrosion.

Series CGK/MGK enclosures are made of zinc alloy. The finish of CG/MG series is made from epoxy powder, which gives the enclosures high scratch and shock resistant properties as well as good chemical resistance.

The finish of CGK/MGK series (size “21.21”) is made by black chrome plating RoHS 2 conform.

The metal covers are made with the same quality materials as the enclosures, and are fitted with a short cord to make it always retrievable.

Scope of application

External interconnections in vehicles, in harsh environments and in humid areas and with sensitive interconnections requiring shielding from electromagnetic interference.

They are particularly suitable for the applications in the railway industry and any application requiring high resistance to pressure, impact and corrosion, with IP66/**IP68**/IP69 protection rating.

They also ensure a good shielding for electromagnetic compatibility.

The IP68 degree of protection marked or assigned to the enclosure is ensured if the enclosures are correctly installed and the cable entry devices have equal or higher IP rating.

Degree of protection compliant with EN IEC 60529

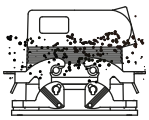

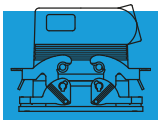

When mated and locked, the CGK/MGK (“21.21”) and the CG/MG enclosures protect the connector inserts fitted inside from outside interference, such as mechanical shocks, foreign bodies, humidity, dust, water or other fluids such as cleaning or cooling agents, oils, etc.

The IP68 degree of protection ensured by the enclosures is fully described in the EN IEC 60529 standard, which classifies the enclosures according to their protection against the entry of foreign bodies and water.

IP68 = Total protection against dust, and against the access to hazardous parts with access probe of Ø 1,0 mm (1st characteristic numeral), and protection against the effects of continuous submersion in water (duration ≥ 30 min upon agreement and water depth ≥ 1 m upon agreement) (2nd characteristic numeral).

These enclosures have also successfully passed the tests required for the **IPX6** degree of protection (tightness to powerful water jets) and for the **IPX9** degree of protection (high pressure and temperature water jets) according to EN IEC 60529. Their full “versatile” degree of protection is therefore **IP66/IP68/IP69**.

The following table shows only the IP 68 level of protection. Please see page 46 for the complete table of the different levels of protection specified by the IP standard.

FIRST Index figure	Degree of protection SOLIDS		SECOND Index figure	Degree of protection WATER	
6		Protected against access to hazardous parts with a wire dust-tight (total protection against dust)	8		Protected against the effects of continuous immersion in water at depth and/or duration upon agreement.

CG/MG (“44.27”, “57.27”, “77.27”, “104.27”) series

1. Threaded cable entry hole, available in different Pg diameters (types with prefix starting with “**C**”) or metric thread (types with prefix starting with “**M**”) compliant with EN 60423 standard, for cable entry devices compliant with EN IEC 62444 standard (former EN 50262), for vertical or horizontal layout.
2. Sturdy, corrosion proof foundry grade aluminium alloy enclosures, with RoHS 2 conform chromate treatment. The following types are available: wall mounted, flush mounted fixed and free enclosures with free protective cover.
3. Oven cured thermosetting paint with epoxy powder, colour black RAL 9005, which gives the enclosures a high mechanical strength and makes them resistant to external agents (only CG/MG).
4. The inserts are made of UL certified self-extinguishing fibreglass reinforced thermoplastics, and feature an operating temperature range between -40 °C and +125 °C.
5. Insert profile polarised with asymmetrical guides to avoid incorrect matings. The inserts have a mechanical life equal to or higher than 500 mating cycles.
6. Inserts are manufactured in compliance with European standard EN IEC 61984 (former DIN VDE 0627), certified and identified with UL and CSA marks, as well as EAC (Eurasian Customs Union) and CQC (China) marks, according to type and series.
7. Special NBR elastomer, anti-ageing, oil and fuel resistant seals which, together with the cable entry devices (not supplied) ensure mated connectors IP66/**IP68**/IP69 degree of protection. The seals are internally positioned to give a better protection from sunlight and outside elements.
8. Locking is available in two solutions: **screw-type** with hexagonal head stainless steel screws or **bayonet-type**. The slotted hexagonal head screws can be fitted and removed by using either a 1,5 mm thick blade screwdriver or a 10 mm hexagonal key, and can be easily accessed even when fitted on enclosures with horizontally exited cables. Tightening torque 2,5 Nm.

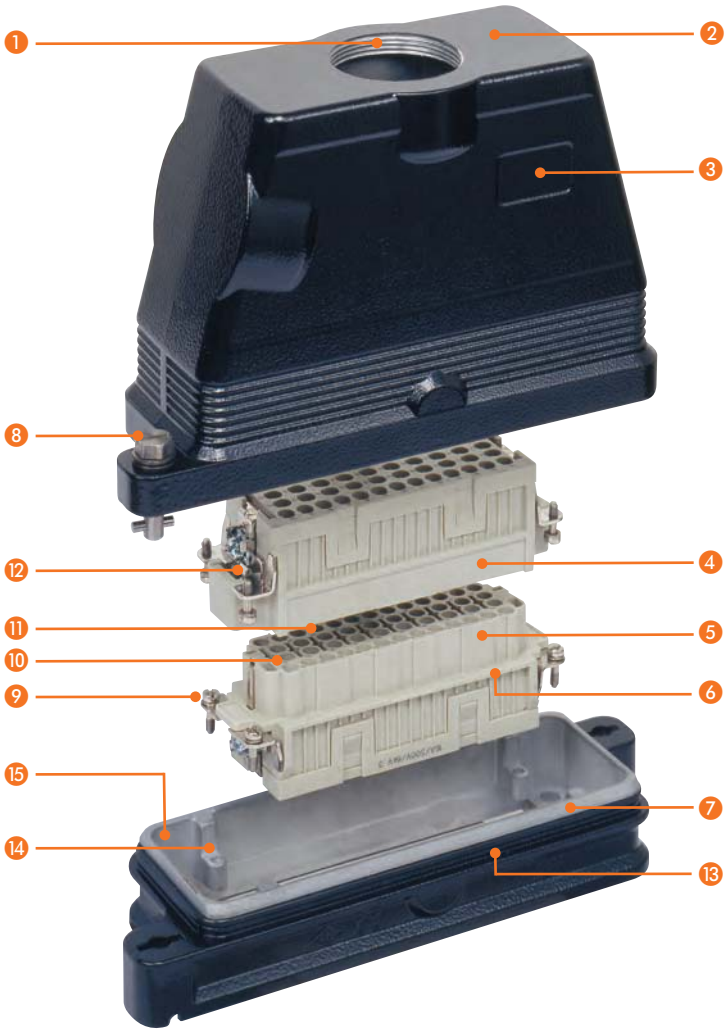

SCREW CLOSURE

BAYONET CLOSURE

9. Captive insert fastening screws, with anti-slackening spring washer.
10. Contact position identified with numbers or codes on both sides of each insert and printed with a laser system or from a die.

11. Silver or gold plated brass contacts connected to the wires by means of captive screws supplied already slackened, with spring terminal (SQUICH®), by means of crimping (crimp contacts available separately), or with a built-in 45° terminal block (still with screw or spring terminal).
12. Pre-leading (FMLB) protective earth terminal with a wide contact surface.
13. Fixed, bulkhead-mount enclosure with fastening screws inside the gasket.
14. Wider enclosures to give more space for the cabling.
15. They ensure a good screening for electromagnetic compatibility, resistance to vibrations in compliance with EN 61373 railway standard and to pressurised water (IPX9).

dimensions shown in mm are not binding and may be changed without notice

COB series

Functionality counts

The **COB** system of panel supports makes it possible to use multipole connectors within electric panels without the traditional metallic enclosures as protection is assured by the electric panel itself or other container.

N.B.: Connectors must not be connected and disconnected under load or when live.

The **COB** system is approved by **UL** as support for multipole connectors (UL ECBT2 and ECBT8 file E115072), as well as by **DNV-GL** and **Bureau Veritas** maritime applications on board ships.

The **COB** system may be assembled in the three following ways:

- On panels with window snap fastening device (**Figure 1**).
- On DIN EN 60715 rails, both lengthways and crossways to the support (**Figure 2**).
- On fixed panels using screws (**Figure 2**).

SUM-UP

- **reduction in cost and space with respect to metallic enclosures plus traditional terminal blocks enabling "modular" wiring inside panels, very handy in case of maintenance: fast replacement of devices and entire sections leading to shorter downtime;**
- **possibility of pre-wiring and testing of the connectors at bench, fastening the commissioning of the installation on site;**
- **easy wiring inspection and tests with coupled connectors, thanks to rear access to the inserts by the overturning (connector hinged and locked on the base support);**
- **fast mounting in panels thanks to the snap fastening device on the DIN EN 60715 rails;**
- **sturdy support structure, specific to the size of each insert, it does not require any preparation;**
- **broad passage for housing of conductor cables;**
- **mobile parts prearranged for the clamping of bundles of conductors of multi-core cables, to prevent contact with the connector contacts.**

The COB system satisfies the most varied installation needs thanks to the interchangeability of the connector inserts. The inserts can be installed as per the table aside.

In addition, the **COB...BC** supports may house the ILME **CR..AD1** and **CR..AD2** series plates for the D-SUB inserts (miniature-connectors).

Product details

1. **COB, TSF** or **COB TSFS** insert support blocks (with cable clamp) for mobile mounting, in self-extinguishing thermoplastic material.
2. Passage for cable support bands (from 2,2 to 4,8 mm).
3. Locations for insertion of identification tags (size 9 x 20 mm).
4. Threaded metallic inserts for screws to fix the connectors and possibility of coded connection with the use of specific pins (ILME part: CR 20, CRM, CRF, CR 20 CX, CRM CX and CRF CX) when identical connectors are used.
5. **COB TCQ** insert carrier block for window mounting in self-extinguishing thermoplastic material, with spring snap fastening.
6. Locking device with levers in self-extinguishing thermoplastic material for insert coupling.
7. Sturdy cable clamp for clamping multipolar cables with a diameter of up to 25 mm or bundles of unipolar conductors.
8. **COB..CMS** enclosure for mobile mounting, in self-extinguishing thermoplastic material, IP20 degree of protection.
9. Free passage for mounting wired insert with conductor cables.
10. Mobile blocks (in **COB..BC** kit) in self-extinguishing thermoplastic material, with quick release device for insert turnover, wiring operations, verifications and maintenance
11. **COB..BC** panel support for bulkhead mounting in self-extinguishing thermoplastic material, sturdy block support structure, with broad passage for housing of conductor cables.
12. Holes for fixed fastening with screws without DIN EN 60715 rails.
13. Snap fastening on DIN EN 60715 rails, both lengthways and crossways to the support.
14. Rollover pins that can be released and allow the use of pre-wired inserts.

PE optional earth jumpers

description	part No.
galvanized brass, to be optionally used with COB series:	
for inserts “44.27” size	**CR 06 BPE**
for inserts “57.27” size	**CR 10 BPE**
for inserts “77.27” size	**CR 16 BPE**
for inserts “104.27” size	**CR 24 BPE**

CR...BPE accessories PE (protective earth) jumpers could be mounted under the connector inserts for the connection of the two insert’s PE plates.

To guarantee to proper alignment of the insert inside the enclosure, it is necessary to use both jumpers supplied (in the same housing or hood); the jumpers are not usable individually.

Furthermore the user is responsible for verifying the continuity of the PE connection ⏚ (male and female) independently of using CR...BPE earth jumpers.

4 holes for round cables Ø 5 - 13.5 mm	**CYR 24.4**	104.27

CYR enclosures for round cables

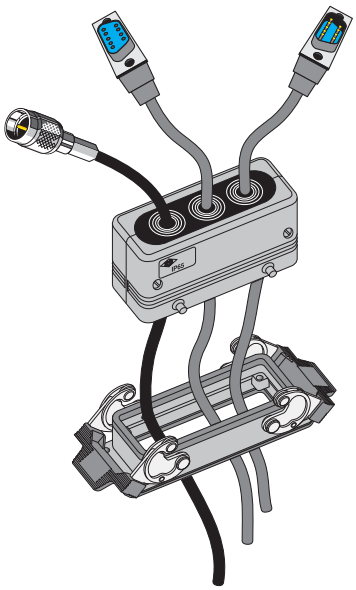

The CYR enclosures are used in installations that require a passage for round cables for data transmission (e.g. computers or PLC) via equipment such as command or control panels, ensuring a good condition of the cable connections.

The enclosures are in two parts and have sealing gaskets to preserve the degree of protection of the equipment. The enclosures also contain a rapid cable block device.

The CYR 16.3 and 24.4 can be used with the **bulkhead mounting housings with 2 levers** respectively.

description	part No.
without housings (to be ordered separately) made in two halves	**CYG 16**

CYG 16 in-line joint
- The joint is made with the CYG 16 enclosure and two bulkhead housings “size 77.27” with one or two levers (to be ordered separately).
- The joint is ideal for use with extension connections and/or as adaptor.
- Made in two halves to facilitate conductor cabling.
- Two inserts in various combinations may be inserted in the joint (to be ordered separately):
  - female/female inserts (as adaptor joint)
  - male/male inserts (as adaptor joint)
  - female/male inserts (as extension joint)

for 2 Ⓒ hoods with lever and gasket “44.27” size and one housing “57.27” Ⓐ size		**CYG 06H10D**

How to use the CYG 06H branch coupling

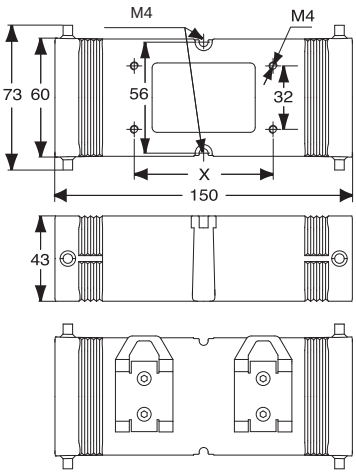

The cables are branched off by using the CYG 06H coupling in the 1 or 2 branch-off versions.
Multi-pole inserts “44.27” size can be fitted inside the two side recesses.
The entire unit can be used with one lever hoods complete with connector inserts.
The front faces can be fitted with “44.27” and/or “57.27” size bulkhead housings.
The coupling may also be used as an adapter by using a combination of different insert versions.
The CHC 06 LG cover may be used to close the coupling side faces.
In the branch-offs, the CSS series dual spring terminal inserts allow two wires to be connected without having to fit additional terminals inside the coupling.

Coupling screws for CT/CTSE inserts

The use of CRBF (female) and CRBM (male coupling screws is recommended to guarantee a stable and safe coupling between inserts (without enclosures) with terminal blocks and inserts without terminal blocks.

CRBM **CRBF**

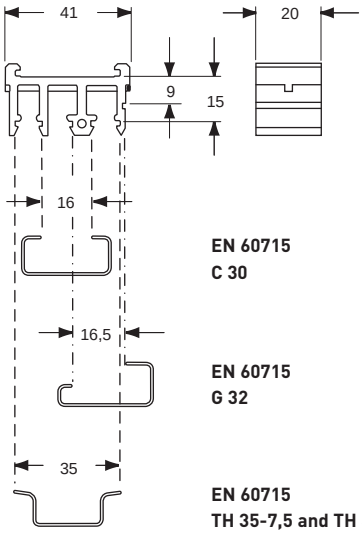

Use of cable-clamping plates

In accordance with the recommendations of standard IEC 60352-2, the weight of the conductor groups or multipolar cables must not cause any stress on the contacts inside the inserts. It is therefore advisable to use cable-clamping plates in those inserts without enclosures.

POF contacts series
CLF DD and CLM DD

Fibre optic cables provide data transmission not subject to electromagnetic interference, contrary to copper-based (electric) data transmission.

The new fibre optic contacts **CL series (CLF DD and CLM DD)** can be used in combination with POF (polymer optical fibre) Ø 1,0 mm (core) / 2,2 mm (sheath) in ILME range of heavy duty multipole connectors, offering the following features:

- inherent immunity to EMI (electromagnetic interference);
- perfect electrical insulation;
- lightweight;
- high transmission capacity and high bandwidth;
- high data security;
- IP66/IP67 recommended to minimize impairing effect of dust contamination;
- male and female contacts CL series for POF Ø 1,0 mm (core) / 2,2 mm (sheath), with same geometry of crimp contacts CD series for conventional copper conductors;
- usable in connector inserts with contact cavities geometry of CDD series, including some modules of MIXO series and some inserts of CQ series, according to **Table 1**.
  Not for use in CD inserts series [1];

Table 1.

CDD series NOTE – Not suitable for CDDF/M 38 /38 N	CDDF/M 24 CDDF/M 42 CDDF/M 72, CDDF/M 72 N CDDF/M 108, CDDF/M 108 N
CQ series	CQF/M 07 CQF/M 12 CQF/M 17
MIXO series modular connectors	CX 12 DF/DM CX 17 DF/DM
CX series combined connectors – aux poles number of cavities highlighted in **bold**	CXF/M 8/24 CXF/M 6/36 CXF/M 12/2

[1] For CD inserts series a similar solution for use of POF Ø 1 mm may be developed upon request: please contact our Sales Department or our local Subsidiaries/Distributors.

- use of **alignment/coding pins on connectors/connector modules is mandatory** for fibre optic applications, in order to avoid damages to contacts and in order to minimize the natural attenuation of light signal which is mainly due to inaccuracy of the mating surfaces of the POF (polishing and perfect cleanliness of the two mating fibres) and to axial misalignment;
- POF to be stripped, crimped, cut and polished according to instructions on pages besides.
- for size “77.62” 2-insert combinations use JCHI 32 L/LP (page 120 catalogue XDG JEI 415) or a special version with stainless steel rigid lever available upon request.
- for the installation of fibre optic, **it is recommended to use only bulkhead mounting housings and corresponding hoods with vertical cable outlet.**

ACCESSORIES

CR anchorages

The CR..FS series anchorages are employed for use of connector inserts (normal or MIXO modular) without enclosures and enable anchoring cables with clamps to prevent transmitting friction forces to contacts. CR..SS anchorages (with grip to facilitate connector disconnection) are used for earth connecting of several conductors and/or of the screen of shielded cables.

CR...DF self-centring floating frame

CAUTION: As the frames are floating, **the PE earthing connection of the metal surfaces on which they are mounted** (mounting bases) **must be performed separately** and cannot be done by connecting the PE earthing contact to the corresponding connector inserts.

NOTE: The supply includes 1 frame and 4 shoulder screws with cylindrical head and notch to fix the frame in place.

For use with MIXO inserts CX 04 X, please contact ILME S.p.A.

* Except CT, CTS and CTSE

Technical specifications
- materials
  - floating frame, inserts: stainless steel
  - fixing screws: zinc-plated steel
- mechanical endurance: ≥ 500 cycles
- compensation range:
  - x axis: ± 1,5 mm
  - y axis: ± 1,5 mm

Characteristics
- Suitable, depending on size, for all standard and MIXO connector inserts and frames, except series CT, CTS and CTSE.
- Designed to be used in the transportation, printing and power electronic industries (for example boxes for rack cabinets) and in all industrial applications that require, during assembly or maintenance, the connection of connectors without possibility of controlling the alignment.
- Enables the **self-centring coupling of two corresponding** connectors without the use of enclosures; they freely move on their base plate (± 1,5 mm on both axes) ensuring the **alignment of the coupling**.

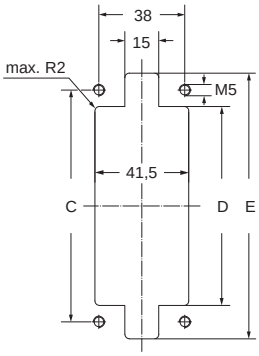

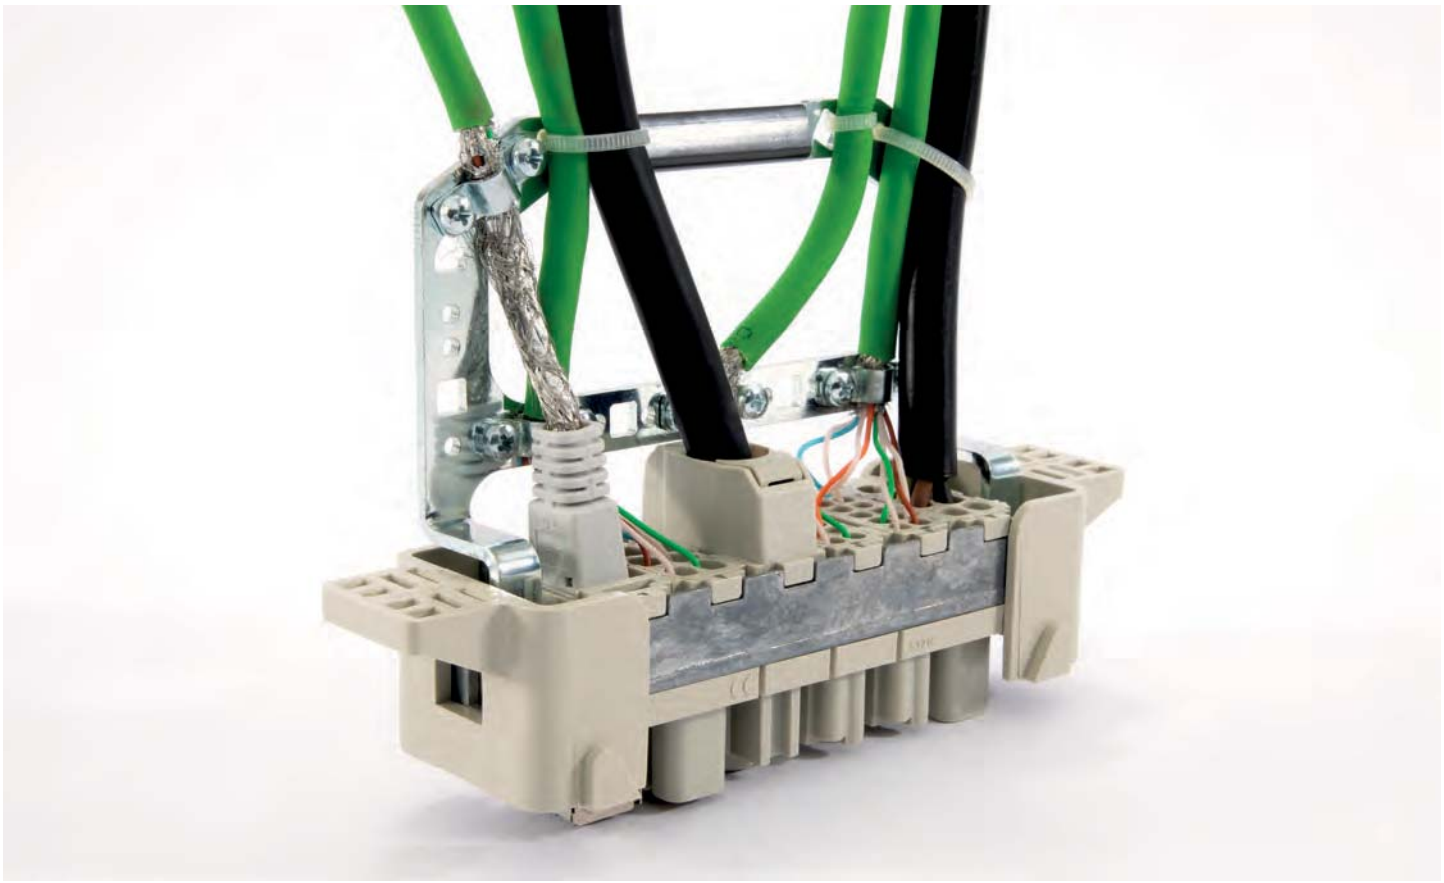

1) distance for electric and fibre optic contacts:
max 27 mm
distance for pneumatic contacts:

CR 20/CR 20 D and CR 20 CX/CR 20 CX D coding pins

Each series of connector inserts is made in such a way as to make incorrect coupling between inserts of different series impossible.
When a number of identical connectors with different functions are mounted closely together these must be selected in such a way as to prevent the coupling of a mobile part on a non-corresponding fixed part and consequent damage and breakdown.

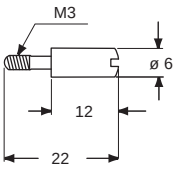

Code pins are supplied to apply in place of the normal insert fastening screws (see example below). In this way the coupling of identical connectors is assured. The combination of code pins makes it possible to obtain a high number of selective couplings.

Each series of connector inserts is made in such a way as to make incorrect coupling between inserts of different series impossible.
When a number of identical connectors with different functions are mounted closely together these must be selected in such a way as to prevent the coupling of a mobile part on a non-corresponding fixed part and consequent damage and breakdown.

Code pins are supplied to apply in place of the normal insert fastening screws (see example below).
In this way the coupling of identical connectors is assured. The combination of code pins makes it possible to obtain a high number of selective couplings.

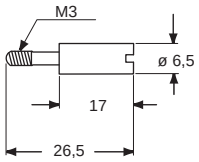

Even when coding is not required, it is recommended to use CRM and CRF pins with CD and CDD inserts to reduce movements when fitting and removing the connectors and to avoid contact damages.
Within this scope, the EN 175301-801 standard (former DIN 43 652) requires a maximum angular fluctuation of ± 5° on the long side, ± 2° on the short side.

The typical use of the product requires three bridges each with its shrinking tube with L1 / L2 / L3 marking to identify the phases in the wiring.

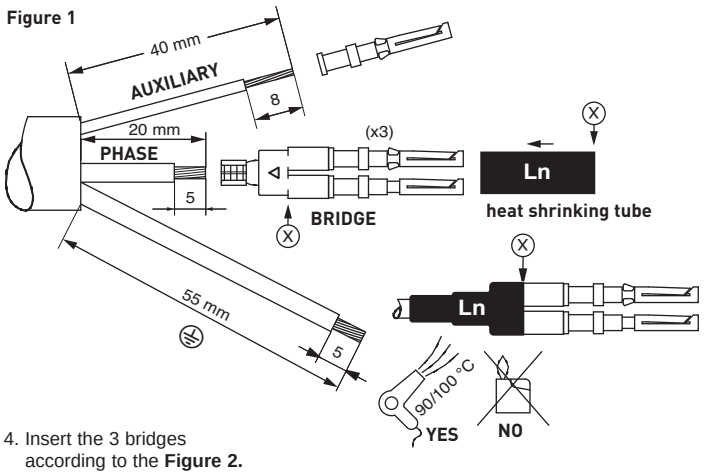

1. Cut and strip the wires as shown in **Figure 1.**
2. Crimp the contacts on the auxiliary wires and the bridge end to the phase wires (3 units) using CRPZ pliers and CRD matrix (position 2,5).
3. Insert the insulating heat shrinking tubes on the bridges, their end must be aligned with the position Ⓧ. Then heat them at 90/100 °C till they shrink over the wires.

For wires with cross-section ranging from 1,5 to 2,5 mm² (16-14 AWG), crimp connection with **CRPZ** pliers (model CEMBRE IDT) and **CRD** matrix.

CX BES extraction tool

extraction tool for MIXO BUS connectors

description	part No.
tool for the extraction of the shielded connectors (coax **CX 01 BF/M** page 291, **CX 01 BCF/M** page 289, **CX 04 BF/M** page 291, **CX 08 BF/M** page 293) from either the **CX 1/2 BDF/M** adapters (page 243) or the MIXO BUS **CX 02 BF/M** (page 290) modular units.	**CX BES**

The crimping concept

The crimp connection is an irreversible, non-reusable connection between one or two conductors and a crimp contact. It is obtained by compression deformation (cold forming) and consequent reshaping of the contact crimping stem, or crimp barrel. A good crimp connection is provided by a suitable combination between the crimping dies, the contact crimp barrel (hence the crimp contact), and the cross-section of the conductor.

These considerations refer to crimped connections made with flexible copper conductors of class 5 (flexible) or 6 (more flexible than class 5) according to EN IEC 60228 standard.

Solid copper conductors (class 1) or conductors made by other materials (aluminium, iron, etc.) often require special precautions for both crimp contacts and crimping tools, to be agreed upon with the manufacturer.

The main technical advantages provided by crimped connections over soldered connections are:

- Independence from temperature, being this a “cold” process, performed without using heat and not requiring further materials.
- Elimination of the contact uncertainties due to cold solders.
- No degradation of the elastic characteristics of the female contacts (a problem that arises with soldering temperatures).
- No health risks connected with the use of heavy metals or fumes generated from the soldering process.
- Preservation of the conductor’s flexibility immediately beyond connection.
- No conductors with burned, discoloured or overheated insulating material.
- Excellent reproducibility of the performances of the electrical and mechanical connections.
- Easier production controls.

Other advantages obtained by crimping connections over screw-type connections are:

- Lower voltage drop across the connection.
- High stability in time even in the presence of vibrations.
- High durability in presence of corrosion (gas-tightness).
- Individual insertion of the contacts in the connector (it is possible to eliminate unnecessary contacts).
- Less time required for connection.
- Possibility of pre-production of the terminated conductors with crimp contacts.
- Easy replacement of individual contacts during maintenance.
- Possibility of selectively isolating the circuits during maintenance via the extraction of the contacts from the connector.

The crimped connections for wire sections up to 10 mm^2 are covered by the EN 60352-2:2006 European standard equivalent to the IEC 60352-2 Issue 2 (2006-02) international standard.

The **EN 60352-2** standard also includes a practical guidance, which lists the following main points.

The quality of a crimped connection is mainly affected by the quality of the materials used and by the condition of the surfaces both of the crimp contact (in particular the crimp barrel) and of the conductor.

To ensure a good quality crimped connection, an essential parameter is the mechanical retention of the conductor in the contact. The standard makes a distinction between the closed crimp barrel, inherently stronger, and the open crimp barrel. ILME crimp contacts are closed crimp barrel contacts, with inspection hole which ensure a higher mechanical performance compared to the open barrel crimp contacts, such as better mechanical robustness and stability during operation. They have been high speed precision-machined, thus ensuring a better electrical performance (better conductivity).

In 2002 the Amendment 2 of the previous IEC standard had controversially unified the minimum tensile strength for open crimp barrel contacts (curve B of former Figure 5) and closed crimp barrel contacts (curve A of former Figure 5) making them both equal to the lower values (those of curve B), which can be achieved by open barrel crimp contacts. This change has determined an arguable relaxation of the suitability requirements both for closed crimp barrel, typically larger, machine turned and for crimp tools specially made for these contacts. Several industries continue to prefer the higher performance ensured by closed crimp barrel contacts, the only ones able to ensure the higher resistance to tensile stress values believed to be essential for the most demanding industrial applications.

Therefore, ILME continues to refer to curve A of Figure 5 illustrated in the EN 60352-2:1994 standard: ILME closed crimp barrel contacts, used with flexible copper wires, featuring a cross-sectional area included in the ranges shown and correctly crimped with the recommended tools, ensure tensile breaking resistant connections at least equal to the values shown in the table below (for reference, the corresponding R_t/S unified tensile stress load value is also shown [N/mm^2]). See Table 1.

Section S		Resistance to traction R_t	R_t/S
AWG	mm²	(N)	(N/mm²)
26	0,12	18	150
-	0,14	21	150
24	0,22	33	150

-	4	500	125
10	(5,3)	635	120
-	6	650	108
7	10	1000	100
		(1300)	*(130)*
-	16	*1650*	*103*
-	25	*2300*	*92*
-	35	*2800*	*80*
	50	*3300*	*66*
-	70	*3900*	*56*

Table 1.

NOTE - For 10 mm² wire sections, the resistance to tensile stress shown in *italics* are those specified in the NF F 61-030 standard (for 10 mm², the value in brackets).

The basic criterion used for the tensile strength values required by EN 60352-2 standard is that such resistance is at least equal to 60% of the per unit breaking load of the same annealed copper conductor.

This applies to conductor cross-sectional areas up to about 1,5 mm²; above this cross-section, the ratio is slightly lower, as retention is also affected by friction, which increases linearly with the housing diameter, whilst the cross-section increases by the square.

IEC/EN 60352-2 standard, which historically targeted the electronics industry, restricts its requirements to crimp connections for conductors with a maximum cross-sectional area of 10 mm². For cross-sections higher than 10 mm², up to 70 mm², the standard to refer to is the NF F 61-030:1989 French standard which relates to electrical connectors to be used on board of railway rolling stock, in particular for large crimp contacts, such as those manufactured by ILME.

NOTE - Alternatively, for wire sections between 35 mm² and 300 mm², EN 61238-1:2003 standard can be referred to.
This standard requires constant R_t/S values equal to 60 N/mm², lower than those established by the above mentioned French standard.

Selecting the crimping tool and relevant controls

When you have selected quality crimp contacts and conductors, the next and most important step is to select the correct crimp tool. The practical guidance of standard EN 60352-2 provides the following recommendations on the subject, listing some of the ideal requirements for crimping tools, some optional characteristics, but, above all, it provides a preview of the indispensable controls:

a) The crimping tools and the contacts used shall be supplied by the same manufacturer, otherwise the user shall assume all responsibility for the quality and reliability of the crimp connections.

b) The crimping tools must function correctly and provide a correct crimp without damage to the pin or the component to crimp.

c) In order to obtain a reliable crimp connection, a crimping device with a mechanism that controls the entire crimping cycle shall be used. At the end of the crimping cycle the handles and the ratchet must return to the open position.

d) In all cases the crimping operation shall be made in one single phase, with no further interventions.

e) The removable parts of the tool such as the crimping dies and the locators must be designed in such a way as to make it possible to be inserted within the tool only in the correct manner.

f) The tools must be supplied with the appropriate means for a correct positioning of the pins to be crimped and of the conductors during crimping.

g) The tools must be designed in such a way so that only the necessary adjustments may be made.

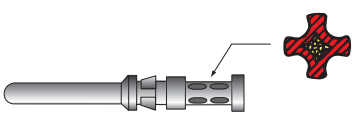

h) The action of the tool must be such that both the pin to be crimped and the fixture of the isolation (when present) are respectively crimped or compressed with a single action.

i) The design of the tool must ensure that the dies for a particular tool may be interchangeable within tools of the same type.
If they are not interchangeable, the identification of tools for which they are suitable must be marked on the dies.

j) The tools may be designed so as to produce a marking or coding of the die on the pin to be crimped so that the crimping may be checked for verification of the correct die.

k) The design of the tool must allow the verification of the dies with gauges to measure wear.
The gauge verification method must be that specified by the manufacturer of the tools.

With suitable flexible copper conductors, the crimping tool proposed by ILME gives 8-indent crimping (**see figure**) in conformity with standard EN 60352-2. Periodic control of the wear of the crimping dies can be carried out with the appropriate “go – no go” gauges (to be purchased separately). For extra operational details, consult the following pages on tools, and the relevant instruction sheets and/or use and maintenance manuals.

The manual and automatic crimping tools selected by ILME are carefully designed to ensure symmetrical deformation of the crimping area of the contact and wire, by means of their own, internal high pressure forming parts. The positioner ensures that the wire and crimp contact meet in the appropriate part of the tool. Sprung mechanisms built into the tools ensure that the contacts are not inserted in the tool before the indenters are fully open, and that the tool does not open before the crimping process has been completed.

The **CIPZ D** (for 5A crimp contacts), **CCPZ MIL** (for 10A and 16A crimp contacts) and **CXPZ D** (for 40A crimp contacts) manual crimping tools are suitable for use when compressed air sources are unavailable, for low or medium-low workloads.

The **CCPZ RN** (for 10A, 16A and 40A crimp contacts) manual crimping tool is also suitable for low or medium-low workloads.

All the above tools provide 8-indent crimping.

The **CCPZ TP** (for 10A and 16A crimp contacts) and **CXPZ TP** (for 40A crimp contacts) manual crimping tools are also suitable for low or medium-low workloads and provide a “square shaped” crimping cross-section. Crimped connections produced by these tools are in compliance with the requirements of EN 60352-2.

The **CCPZP** pneumatic crimping bench tool without automatic positioner (for 10A and 16A crimp contacts) is suitable for use in the workshop (where compressed air is available) for high or medium-high workloads. Using the same manual crimping tool turrets, it is possible to change rapidly from crimping on male contacts to crimping on female contacts of the same series (10A and 16A).

The **CCPZPA** pneumatic crimping bench tool with automatic positioner (for 10A and 16A crimp contacts) is suitable for workshop jobs (where compressed air is available) for medium-high or high workloads. It is recommended in particular for crimping high quantities of contacts that are the same type or have the same section, thus saving a significant amount of time thanks to automatic operation and reduced operator fatigue. Where the type or kind of contact must be changed frequently, it is preferred to use the version without automatic positioner.

The **CXPZP D** pneumatic crimping bench tool without automatic positioner (for 40A crimp contacts) is suitable for use in the workshop (where compressed air is available) for high or medium-high workloads. By using the same positioners as those of manual crimper CXPZ D, the size of a contact can be rapidly changed with one of the same type.

The semiautomatic stripping-crimping machine, type **ZFU-CD**, is suitable to be used in workshops (where an electrical or pneumatic power supply is available) and for heavy workloads. It enables to produce large amounts of crimped connections in less time because of the possibility of simultaneously carrying out stripping and crimping operations. The contact and tool replacement operations, which are minimized because of the pre-set programs that can be stored and customized by the user, require the production to be programmed to reduce downtime. When a sequential processing is required despite the economic advantages offered by the above-described solution, it is preferable to use pneumatic bench pliers without the above-described positioner or one of the manual pliers.

In any case, the quality of the results from the crimping tools, combined with the ILME crimp contacts, is identical and at the highest market levels, exceeding the requirements of the standard EN 60352-2.

Although the crimping appliances and tools suggested here include a set of control automatisms and mechanisms, which prevent the chief misunderstandings and errors, the operator is advised to always take care not to work in inappropriate conditions.

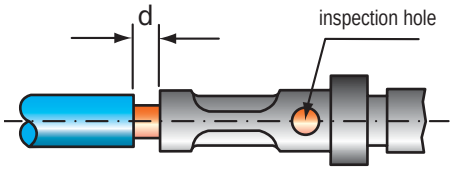

The crimping operation

The practical guide in standard EN 60352-2 supplies further general information regarding crimp contacts for multipole connectors.

1. Insertion of the conductor in the crimp contacts

The conductor must be correctly positioned in the pin to be crimped.
The crimping indentations must be correctly positioned on the foot to be crimped. There must be sufficient space, in conformity with the manufacturer's instructions, between the end of the insulating material of the conductor and the pin to be crimped ("d").
As a general rule, the stripping length is equal to the pin insertion depth + 1 mm (for sections up to 1 mm^2) and + 2 mm (for sections from 1 to 10 mm^2) *. When using closed crimp pins with an inspection hole, the crimp conductor must be visible through the inspection holes.

* Keeping the conductor strands visible above the contact collar enables you to check correct, i.e. make sure no strands have been cut. This also ensures a certain flexibility for the connection, by not transmitting to the contact any flexure stresses caused by installation. However, in practice, some operators give priority to insulation, by reducing to zero the gap between cable insulation and the contact collar.

2. Insertion of crimped contacts in the connector insert

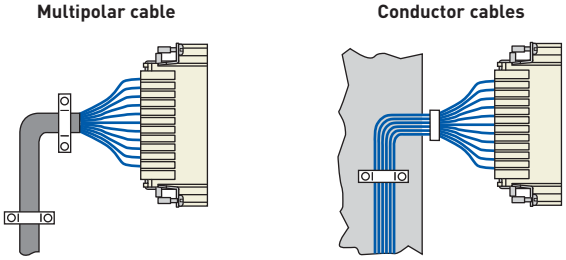

It is recommended that the crimped contacts be perfectly straight and inserted within the contact slots in a single operation and without excessive force until a clicking sound is heard.
The correct retention of the contact should be verified with a light pulling of the wire. Non alignment of the crimped contacts must be avoided because this could cause possible loosening of the retention springs and consequently jeopardise the retention of the contact in the insert.
For small section conductors (≤ 0,35 mm^2) or for specific application, the use of the insertion tool specified by the manufacturer is recommended.

3. Removal of inserted contacts

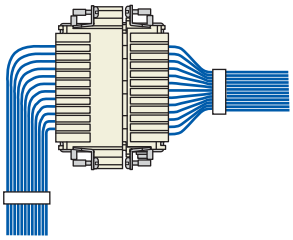

In the case of incorrect insertion or wiring substitution, inserted contacts may only be removed using the removal tools specified by the manufacturer.

4. Mounting and flexure of multi-wired bundles or multipolar cables with crimp contacts

Bundles of conductors or multipolar cables with crimp contacts for multipole connectors must not cause stress to the inserted contacts with their weight as this would cause the contacts to bend over to the coupling area of the connectors and consequently damage them. The connectors must therefore be provided with cable clamps or the conductor bundles or multipolar cables must be mounted as described in the figures below.

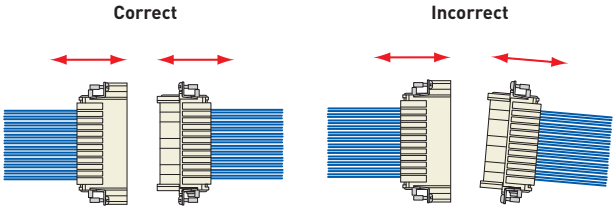

If the conductor bundles or the multipolar cables have to be immediately folded over on the back of the connector insert, it is recommended not to use any mechanical force in the axial direction with respect to the coupled contacts. The figure shows a correct bending and clamping of the multiwire bundles using the crimp contacts.

5. Coupling and uncoupling of multipolar connectors with crimp contacts

In order to prevent stress on the crimp contacts, the connectors must be coupled and uncoupled in the axial direction with respect to the contacts, without touching the conductor bundles or cables.
Standard DIN 43652 (incorporated into specification EN 175301-801) that applies to the ILME inserts of the CD series (this recommendation is also valid for the CDD series) prescribes a maximum deflection from the axis of ± 5° on the greater side and ± 2° on the smaller side.

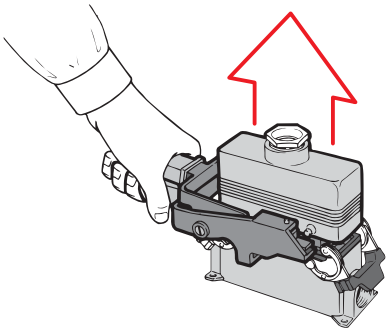

To keep the play within this limit, especially during the uncoupling phase, guide pins CRM and CRF may be used. The use of ILME pliers (code number CPES) is recommended for the uncoupling operations for CD inserts (64 poles) and CDD inserts (108 poles).The pliers work on the fulcrum and lever principle and perform the following main tasks:

I - Reduce effort and coupling times to the minimum, even when working in the most impractical and inaccessible points.

II- Perform the uncoupling of multipolar connectors in full conformity of standard DIN 43652 (now EN 175301-801).

The pliers allow the extraction of the inserts to be made perfectly axially with respect to the contacts, evenly distributing the pressure on four points (housing pins).

Use and maintenance instructions

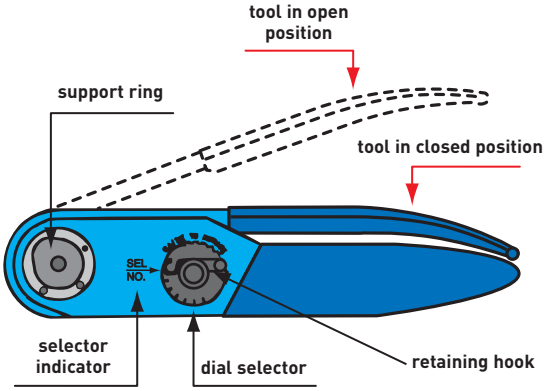

1. General specifications

The **CCPZ MIL crimping tool** conforms to the international standard MIL-C-22520/1. Crimping is performed with 8 pressure points. The tool is equipped with a geared mechanism to control the complete crimping cycle. The tool must be equipped with an interchangeable positioner (CCTP) according to the series of contacts to be crimped.

1.1 Crimping range

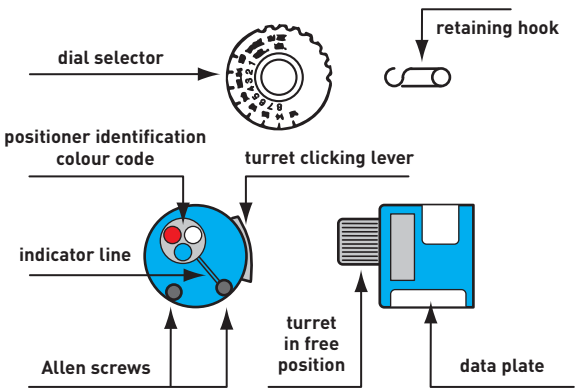

Conductor cross-sectional area range:
from 0,14 mm² (26 AWG) to 4 mm² (12 AWG) for positioner 16A,
from 0,14 mm² (26 AWG) to 2,5 mm² (14 AWG) for positioner 10A

Caution!
The handle of the tool must be in the open position when the turret is installed, disassembled or opened. If not, the turret and the crimping tool may be damaged.

2. CCTP positioner installation

1 The crimping tool must be in the open position.
2 Press the clicking lever that releases the positioner in the adjustment position.
3 Position the previously selected CCTP positioner on the support ring located on the crimping tool (matching the special pin on the base of the turret with the corresponding hole on the support ring), aligning the tapped holes with the socket head screws.
4 With the CCTP positioner positioned against the support ring, tighten the socket head screws with the 3,5 mm Allen wrench (supplied with the kit).
5 Refer to the data plate on the CCTP positioner. From the colour code column, select the colour of the positioner that corresponds to the appropriate code and dimension of the contact to be crimped.
6 With the CCTP positioner in the adjustment position, turn the turret until the colour-coded positioner is aligned with the indicator line. Press the turret until it clicks into the connected position.
7 Refer to the data plate on the CCTP positioner. From the column indicating the proper conductor section, determine the number that corresponds to the contact being used.
8 Remove the retaining hook from the crimping tool dial selector. Lift the dial selector and turn it until the selector number is aligned with the indicator (SEL. NO.). Replace the retaining hook (if necessary).

3. Crimping instructions

1 Insert the contact and the prepared conductor through the opening of the indenter in the turret positioner.
2 Tighten the crimping tool handle until the stop gear is released. The tool will return to the open position.
3 Check the position of the crimping on the contact crimping foot. Ideally, the crimping should be between the inspection hole and the top edge of the crimping foot.
The head of the contact should not be squared and the inspection hole should be intact.

4. Removing the CCTP positioner

With the crimping tool in the open position, to disassemble the positioner, loosen the socket head screws using the 3,5 mm Allen key wrench (supplied with the kit). After the threads are released from the support ring, pull off the positioner with a straight movement.

5. Instructions to check calibration

The operations to check the crimping tool must be carried out with the dial selector in position 4 and the CCPNP gauge.
ATTENTION! Do not crimp the gauge.

5.1 Calibration check

Put the crimping tool in the completely closed position.
"GO" - Insert the end (green) of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
"NO GO" - Insert the end (red) of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

Gauge	tool selector pos. No.	Ø A ± 0,00254 mm (GO) green	Ø B ± 0,00254 mm (NO GO) red
CCPNP	4	0,991 (mm)	1,118 (mm)
		0,0390 (in)	0,0440 (in)

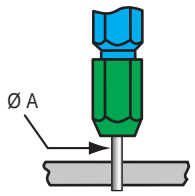

Fig. 1

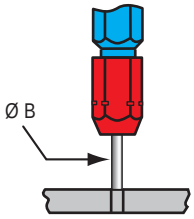

Fig. 2

6. Crimping tool maintenance

No maintenance is required.
However, it is good practice to keep the indenter tips free from residual deposits of the coloured band (some types of crimp contacts as per MIL standards are identified by coloured bands in the crimping area) and any other debris.
A metal brush may be used for this purpose.
The following is strongly recommended:

1 DO NOT immerse the tools in a solution to clean them.
2 DO NOT brush oil in the tools to lubricate them.
3 DO NOT try to disassemble the tool or repair it.

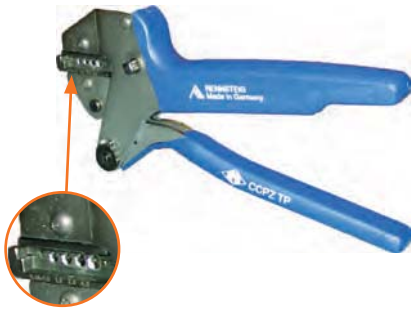

This is a high-precision manual crimping tool and must be used as such.
For automatic crimping operations refer to the CCPZP and/or CCPZPA crimping tool models.

	WA-27-309-EP					

Use and maintenance instructions

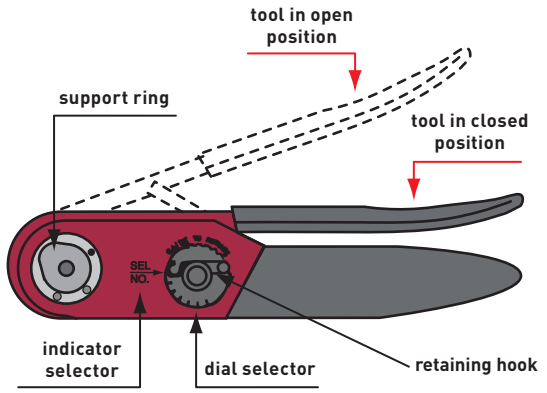

1. General specifications

The **CXPZ D crimping tool** performed with 8 pressure points.
The tool is equipped with a geared mechanism to control the complete crimping cycle.
The tool must be equipped with an interchangeable turret (CXTP) according to the series of contacts to be crimped.

1.1 Crimping range

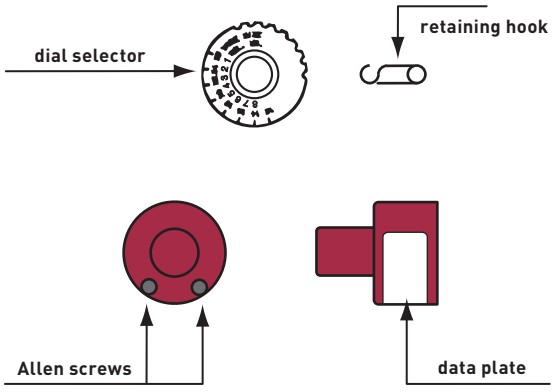

Conductor cross-sectional area range: from 1,5 mm² (16 AWG) to 6 mm² (10 AWG).

Caution!
The handle of the tool must be in the open position when the turret is installed, disassembled or opened. If not, the turret and the crimping tool may be damaged.

2. CXTP positioner installation

1 The crimping tool must be in the open position.
2 Position the CXTP 40 positioner on the support ring located on the crimping tool (matching the special pin on the base of the turret with the corresponding hole on the support ring), aligning the tapped holes with the socket head screws.
3 With the CXTP 40 positioner positioned against the support ring, tighten the socket head screws with the 3,5 mm Allen wrench (supplied with the kit).
4 Refer to the data plate on the CXTP 40 positioner.
From the column indicating the proper conductor cross-sectional area, determine the number that corresponds to the contact being used.
5 Remove the retaining hook from the crimping tool dial selector.
Lift the dial selector and turn it until the selector number is aligned with the indicator (SEL.NO.).
Replace the retaining hook (if necessary).

3. Crimping instructions

1 Insert the contact and the prepared * conductor through the opening of the indenter in the turret positioner.
2 Tighten the crimping tool handle until the stop gear is released.
The tool will return to the open position.
3 Check the position of the crimping on the contact crimping foot. Ideally, the crimping should be between the inspection hole and the top edge of the crimping foot.
The head of the contact should not be squared and the inspection hole should be intact.

* i.e. stripped at the correct length and with strands lightly twisted to recover regular lay of strands

4. Removing the CXPT 40 positioner

With the crimping tool in the open position, to disassemble the turret, loosen the socket head screws using the 3,5 mm Allen wrench (supplied with the kit).
After the threads are released from the support ring, pull off the positioner with a straight movement.

5. Instructions to check calibration

The operations to check the crimping tool must be carried out with the dial selector in position 4 and with the CXPNP gauge (formerly Daniels G425, now Daniels G436 or G1004 which are equivalent for the purpose).
ATTENTION! Do not crimp the gauge.

5.1 Calibration check

Put the crimping tool in the completely closed position.
"GO" - Insert the end (green) of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
"NO GO" - Insert the end (red) of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

Gauge	tool selector pos. No.	Ø A ± 0,00254 mm (GO) green	Ø B ± 0,00254 mm (NO GO) red
CXPNP	4	1,549 (mm)	1,676 (mm)
		0,0609 (in)	0,0659 (in)

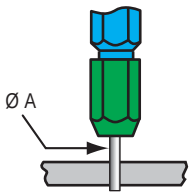

Fig. 1

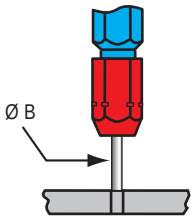

Fig. 2

6. Crimping tool maintenance

No maintenance is required.
However, it is good practice to keep the indenter tips free from residual deposits of the coloured band (some types of crimp contacts as per MIL standards are identified by coloured bands in the crimping area) and any other debris.
A metal brush may be used for this purpose.
The following is strongly recommended:

1 DO NOT immerse the tools in a solution to clean them.
2 DO NOT brush oil in the tools to lubricate them.
3 DO NOT try to disassemble the tool or repair it.

This is a high-precision manual crimping tool and must be used as such.

CRIMPING TOOLS

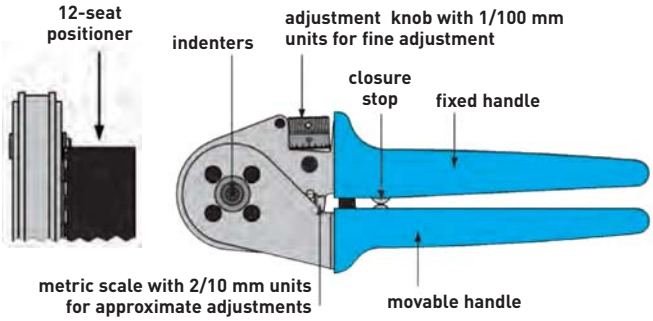

Use and maintenance instructions

1. General specifications

The **CCPZ RN crimping tool** crimps with 8 pressure points, obtaining similar results to the prescriptions of standard MIL-C-22520/1.
The tool has a geared mechanism for controlling the complete crimping cycle, and houses a positioning turret with 12 positions, six of which can be used for positioning the ILME male and female crimping contacts of series CD (10A max), CC (16A max) and CX (40A max).

1.1 Crimping range

Conductor cross-sectional area range: from 0,14 mm² (26 AWG) to 10 mm² (8 AWG).
Caution! The handle of the tool must be in the open position when the turret is installed, disassembled or opened. If not, the turret and the crimping tool may be damaged.

2. Description of tool

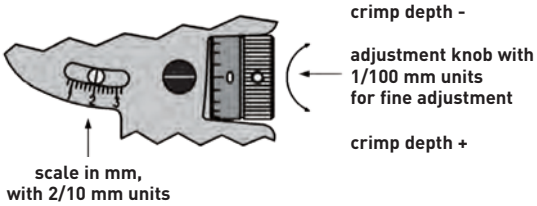

Crimping tool components: a first mobile handle, with a precision stop mechanism with teeth and an opening limiting guide; a second fixed handle with metric scale (units of 2/10 mm); an adjustment system with fine step adjustments of 1/100 mm; four indenters; a 12-seat positioner, fully rotating through 360° for accurate positioning of contacts. A reference table engraved on the tool surface provides the positioner (POS) number and crimping depth (SET) to select according to the type and size of the ILME contact (the crimping tool can be set to any crimping depth which may be required by the contact manufacturer).

3. Adjustment of crimp depth

Crimp depth to be adjusted ad follows:
the adjustment knob should be turned clockwise to reduce crimping depth, and anti-clockwise to increase it.

3.1 Adjustment tolerances:

- 1 scale mark on the knob = adjustment of 1/100 mm (0,01 mm);
- 1 complete rotation of knob = adjustment of 2/10 mm (0,2 mm, this indication can be read on the knob and on the approximate scale);
- 5 knob rotations = adjustment of 1,0 mm (this indication can be read on the scale).

4. Crimping instructions

The reference matrix on the crimping tool indicates the correct seat of the positioner (POS M1, F2, M3, F4, M5, F6) to select, and the crimping depth (SET) to adjust for the contact to be crimped.
The contact is inserted through the crimper entry hole on the opposite side of the positioner.
The contact is closed by closing the handles in the first stop position, in order to prevent the contact coming out off the crimper and to facilitate fitting the conductor in the contact.
The precision stop mechanism with teeth ensures consistently precise crimps, by forcing the crimper to close completely and finish the crimping cycle before the crimper can be re-opened.

Tool adjustment

Positioner seat = M1 (male) - F2 (female)

CDMA/D (male) CDFA/D (female)	Section (mm²)	Crimp depth (mm)
0,3	0,14 0,25 0,37	1,3
0,5	0,5	1,55
0,7	0,75	1,55
1,0	1,0	1,55
1,5	1,5	1,55
2,5	2,5	1,55

Positioner seat = M3 (male) - F4 (female)

CCMA/D (male) CCFA/D (female)	Section (mm²)	Crimp depth (mm)
0,3	0,14	1,2
0,3	0,25-0,37	1,3
0,5	0,5	1,55
0,7	0,75	1,55
1,0	1,0	1,55
1,5	1,5	1,8
2,5	2,5	1,8
3,0	3,0	1,9
4,0	4,0	2,0

Positioner seat = M5 (male) - F6 (female)

CXMA/D (male) CXFA/D (female)	Section (mm²)	Crimp depth (mm)
1,5	1,5	1,55
2,5	2,5	1,8
4,0	4,0	2,0
6,0	6,0	2,5
10,0	10,0	2,3

5. Calibration check

The crimping tool is adjusted in the manufacturer's plant.
To ensure correct calibration, we advise you to check the tool with a gauge every working day.
This is easily done with the CCPNP RN cylindrical gauge in the 2,0 mm Ø position.
ATTENTION!: Do not crimp the gauge.
Crimping depth of 2 mm can be adjusted with the adjustment knob (scale marked on "2", screw indicator on "0" as shown in the above figure).
Put the crimping tool in the completely position.
"GO" - Insert the end of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
"NO GO" - Insert the end of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

Gauge	tool selector pos. No.	Ø A GO	Ø B NO GO
CCPNP RN	2	1,94 (mm)	2,06 (mm)

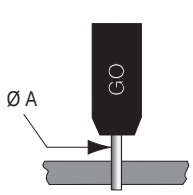

Fig. 1

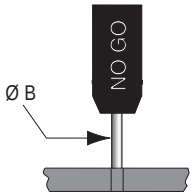

Fig. 2

6. Maintenance and repair

Keep the crimping tool clean and store it correctly when not in use.
The joints need to be lubricated periodically, and the pin stop circular clips must always stay in position.
This is a high precision crimping tool and must be used as such.

Use and maintenance instructions

1. General specifications

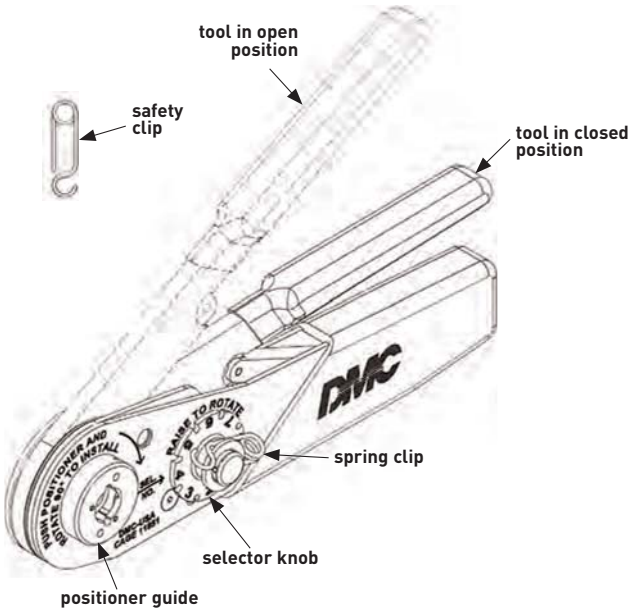

The **CIPZ D crimping tool** (Daniels designation AFM8) conforms to the U.S. Military Standard MIL-C-22520/2C (designation M22520/2-01) (1). Crimping is performed with 8 pressure points and the tool is equipped with a geared mechanism to control the complete crimping cycle.
The tool must be equipped with an interchangeable positioner (CITP D or CIVTP D) according to the series of contacts to be crimped.

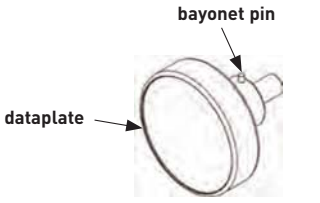

(1) Since October 2011 the MIL-C-22520 series is being progressively replaced by a corresponding SAE (1) AS22520 series. The military series will be fully cancelled once all SAE parts will be published. SAE International, so named since 2006 and established in 1905 as the *Society of Automotive Engineers*, is a U.S.-based, globally active professional association and standards developing organization working in various industries, having as core business the transport industries such as automotive, aerospace, and commercial vehicles.

2. Crimping range

Conductor cross-sectional area range: from 0,08 mm² (28 AWG) to 0,52 mm² (20 AWG).

Caution!
The handle of the tool must be in the open position when the positioner is installed, disassembled or opened. If not, the positioner and the crimping tool may be damaged.

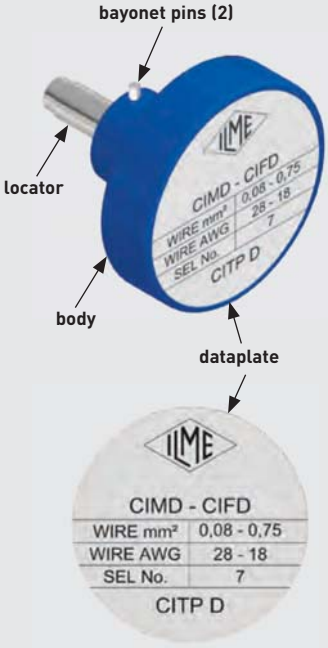

positioner "K" series

Note: dimensions in inches

CITP D positioner

3. CITP D or CIVTP D positioner installation

1 The crimping tool must be in the open position.
2 Remove the safety clip from the positioner guide.
3 Insert the previously selected CITP D or CIVTP D positioner into the positioner guide on the head of the tool. Push down and rotate 90 degrees until bayonet pins lock.
4 Refer to the data plate on the CITP D or CIVTP D positioner for the setup of the selector number that determines crimp height, based on the contact size and conductor size.
5 With the tool in open position, remove the spring clip then raise and rotate selector knob until number indicated on data plate for conductor size to be crimped is in line with SEL. NO. arrow. Reinstall spring clip to avoid unintended change of setup

4. Crimping instructions

1 Insert the contact and the prepared (correctly stripped) conductor through the indenter opening in the positioner.
2 Squeeze the crimping tool handles together until ratchet releases. Handles will return to open position.
3 Check the position of the crimping on the contact crimp barrel. Ideally, the crimping should be between the inspection hole and the top edge of the crimp barrel.

The edge of the contact barrel should not result squared and the inspection hole should remain intact.

5. Removing the CITP D or CIVTP D positioner

With the crimping tool in the open position, to disassemble the positioner, push down on the positioner to release the bayonet pins from the positioner guide. Turn 90 degrees anticlockwise and remove the positioner from the tool.

6. Instructions to check calibration

The operations to check the crimping tool must be carried out with the dial selector in position 8 and the CCPNP gauge.
CAUTION! Do not crimp gauge!

6.1 Calibration check

Put the crimping tool in the completely closed position.
"GO" - Insert the end (green) of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
"NO GO" - Insert the end (red) of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

Gauge	tool selector pos. No.	Ø A ± 0,00254 mm (GO) green	Ø B ± 0,00254 mm (NO GO) red
CCPNP	8	0,991 (mm)	1,118 (mm)
		0,0390 (in)	0,0440 (in)

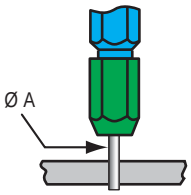

Fig. 1

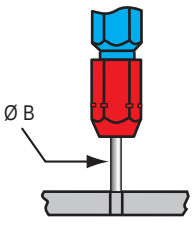

Fig. 2

7. Crimping tool maintenance

No maintenance is required. However, it is good practice to keep the indenter tips free from residual deposits of the coloured band (some types of crimp contacts as per SAE (MIL) standards are identified by coloured bands in the crimping area) and any other debris. A small wire brush may be used for this purpose.

The following is strongly recommended:
1 DO NOT immerse the tools in a solution to clean them.
2 DO NOT brush oil in the tools to lubricate them.
3 DO NOT try to disassemble the tool or repair it.

This is a high-precision manual crimping tool and must be used as such.

Use and maintenance instructions

General specifications

The **CPPZ C crimping tool** is a hydraulically operated tool suitable for manually crimping contact series (70A/100A/200A max) removable crimp contacts which may be used in MIXO series type CX7, CG, CY and CGT adaptors. By using a suitable, hexagonal footprint crimp matrix pair, these pliers allow crimped connections to be made which conform to the highest quality standards.

The main features of these pliers are listed below:
- Scope of application: suitable for crimping wire terminals for up to 150 mm² flexible copper wires.
- Force developed: 50 kN (6 tons).
- Nominal operating pressure: 600 bar (8.600 psi).
- Dimensions: length 346 mm (13,6");
  width (locked moving handle) 130 mm (5,1");
  width (free moving handle) 250 mm (9,8").
- Weight: (without matrixes and without ILME locator) 2,0 kg (4,4 lbs).
- Recommended oil: AGIP ARNICA 32 or SHELL TELLUS OIL TX 32 or equivalent.
- Other features: please read the user and maintenance manual supplied with the tool.

The pliers are equipped with a locator specifically designed for ILME crimp contacts to be mounted on the moving part of the pliers head by means of the Allen screw provided.

NOTE: It is possible to use the CPPZ C pliers with the CX7 70A, CG 100A and CY 200A contact series, by simply fitting the CX7PZ LOC, CGPZ LOC or CYPZ LOC locator and crimping matrixes to be purchased separately.

WARNING: For crimping the CGT adaptors, the crimp locating operation must be carried out by the user.

User instructions

1. Preliminary operations

According to requirements, the pliers can be fitted with one or more pairs of crimp matrixes selected from the matrixes listed in the catalogue, to crimp the contacts shown in the table page 720.

NOTE: *The crimp contacts are only suitable for crimping flexible copper wires featuring a nominal section shown in the table with the crimp matrixes shown in the table. Any contacts – wires – matrixes combination which does not conform to these instructions is not physically possible (ex: using 35 mm² contacts with CGD 25 C matrixes is not possible because the pliers head would not close) or produces non conforming crimped connections or not usable in the MIXO series.*

Open the tool head by moving the matrix supporting hook ❸ outwards until the matrix support ❶ is released.

With reference to **Figures 1 and 2**, select a pair of matrixes suitable to the type of contact and insert them in the housings: one in the matrix support ❶, the other one in the matrix pusher support ❷. (NB: the two matrixes of each pair are the same).

Insert the contact by resting it in the locator with the tip forward, then close the head.

The contact crimp housing will be accessible in the mouth between the matrixes.

Remove the moving handle ❹ by removing the handle locking belt from the handle.

Before carrying out the next operations, make sure the head is fully closed to avoid damages.

The pliers head can rotate by 180° in relation to the body, thus allowing the operator to work in the most comfortable position.

WARNING: do not force the head by trying to rotate it when the tool is under pressure.

2. Approaching the matrixes

If possible closing the dies, rest the pliers head on a work top, then move the moving handle to start moving the matrixes closer to the contact, then carry on moving them until the contact is locked between the matrixes.

Push the correctly stripped and suitable long (15 mm) wire all the way in the contact (or the CGT adaptors) crimp housing by carefully checking that the braids are fully compacted, are not damaged and, above all, are all fully inserted. Correctly pushing the contact in the locator ensures that the matrixes are exactly in the right area to compress (the contact crimp shaft centre). Make sure that the locator is free from any residue which would alter the position of the contact. For crimping the CGT 16 earth adaptor, manually locate the area to be crimped between the matrixes. If necessary, re-open the matrixes by following the instructions described in paragraph 4 and reposition the contact.

3. Crimping

Continue to operate the moving handle (pumping): the piston will gradually move forward until the matrixes come into contact.

Continue the pumping action until the maximum pressure valve clicks in.

4. Releasing the dies

Fully press the pressure release lever ❺ located on the pliers pumping body until the piston goes back and the matrixes open.

To remove the crimped contact, re-open the pliers head.

5. Storage

Fully return the piston as described in paragraph 4, then lock the moving handle in position by using the belt provided.

Cleaning and maintenance

The tool is very sturdy and does not required any special care; a correct operation is ensured by following a few simple precautions.

The tool is supplied with a user and maintenance manual, which gives all detailed instructions. Read this manual before use.

CRIMPING TOOLS

Use and maintenance instructions

1. General specifications

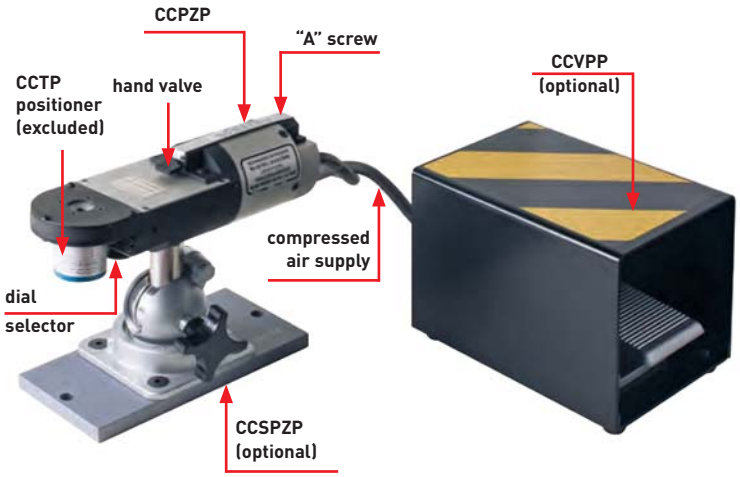

This is the pneumatic version of the **DANIELS AF8 crimping tool** (CCPZ MIL). Crimping is performed with 8 pressure points.
The tool is equipped with a geared mechanism to control the complete crimping cycle.
The tool must be equipped with an interchangeable turret (CCTP) according to the series of contacts to be crimped.
It is possible to use a hand valve (located on the crimping tool) or a foot valve (optional). The tool operating pressure is 5,5 - 8,3 bar. It is recommended to utilise an adjustment and air filtering unit.

1.1 Crimping range

Conductor cross-sectional area range: from 0,14 mm² (26 AWG) to 4 mm² (12 AWG).

1.2 Operation with pneumatic foot valve (optional)

Connect the foot valve between the compressed air source and the tool air inlet. Lower the hand valve on the tool and stop it in the lowered position with the stop screw (A) using a 1,5 mm Allen wrench.

2. Checking the crimping complete cycle control mechanism

Correct operation can be checked based on the following procedure:
1 Install a CCTP turret (see 3).
2 Reduce the pressure to 1 bar.
3 Using a contact that corresponds to the installed turret, with size 0,5, and a wire with section 0,5 mm², use the crimping tool, referring to the crimping instructions.
The indenters will not reach the fully closed position and the contact will be internally blocked if the geared mechanism is operating correctly.
4 To release the partially crimped contact, increase the air pressure of the line to 5,5 - 8,3 bar and again use the crimping tool. It will then complete the crimping, allowing the indenters to return to the fully open position.

3. CCTP positioner installation (Fig. A)

1 Position the previously selected CCTP positioner on the support ring located on the crimping tool (matching the special pin on the base of the turret with the corresponding hole on the support ring), aligning the tapped holes with the socket head screws.
2 With the CCTP positioner positioned against the support ring, tighten the socket head screws with the 3,5 mm Allen wrench (supplied with the kit).
3 Refer to the data plate on the CCTP positioner. From the colour code column, select the colour of the positioner that corresponds to the appropriate code and dimension of the contact to be crimped.
4 With the CCTP positioner in the adjustment position, turn the turret selector until the colour-coded positioner is aligned with the indicator line.
Press the turret until it clicks into the connected position.
5 Refer to the data plate on the CCTP positioner. From the column indicating the proper conductor section, determine the number that corresponds to the contact being used.
6 Remove the retaining hook from the crimping tool dial selector. Lift the dial selector and turn it until the selector number is aligned with the indicator (SEL.NO.). Replace the retaining hook (if necessary).

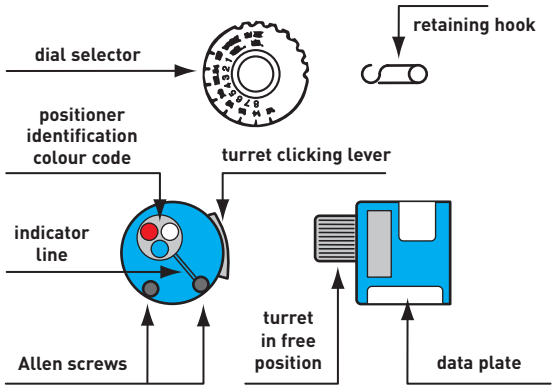

Fig. A

4. Crimping instructions

1 Insert the contact and the prepared conductor through the opening of the indenter in the turret positioner.
2 Activate the hand valve or the foot valve.
Once crimping has been completed, the tool will return to the open position.
3 Check the position of the crimping on the contact crimping foot. Ideally, the crimping should be between the inspection hole and the top edge of the crimping foot.
The head of the contact should not be squared and the inspection hole should be intact.

5. Releasing a partially crimped contact

To release a partially crimped contact, do the following:
1 Increase the air pressure to 8,5 bar and use the crimping tool. If the increase in air pressure does not release the contact, do the following.
2 Turn the dial selector clockwise to the highest lockable setting (the dial selector must be in the blocked position before continuing). Use the crimping tool.
3 If it does not release after several attempts, contact the ILME offices.

6. Removing the CCTP positioner

With the crimping tool in the open position, to disassemble the turret, loosen the socket head screws using the 3,5 mm Allen wrench (supplied with the kit).
After the threads are released from the support ring, pull off the turret with a straight movement.

7. Instructions to check calibration

The operations to check the crimping tool must be carried out with the dial selector in position 4 and the CCPNP gauge.
ATTENTION! Do not crimp the gauge.

7.1 Calibration check

Put the crimping tool in the completely closed position.
"GO" - Insert the end (green) of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
"NO GO" - Insert the end (red) of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

Gauge	tool selector pos. No.	Ø A ± 0,00254 mm (GO) green	Ø B ± 0,00254 mm (NO GO) red
CCPNP	4	0,991 (mm)	1,118 (mm)
		0,0390 (in)	0,0440 (in)

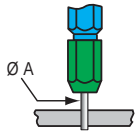

Fig. 1

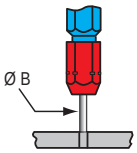

Fig. 2

8. Crimping tool maintenance

No maintenance is required.
However, it is good practice to keep the indenter tips free from residual deposits of the coloured band (some types of crimp contacts as per MIL standards are identified by coloured bands in the crimping area) and any other debris. A metal brush may be used for this purpose.
The following is strongly recommended:
1 DO NOT immerse the tools in a solution to clean them.
2 DO NOT brush oil in the tools to lubricate them.
3 DO NOT try to disassemble the tool or repair it.
This is a high-precision manual crimping tool and must be used as such.

CRIMPING TOOLS

Use and maintenance instructions

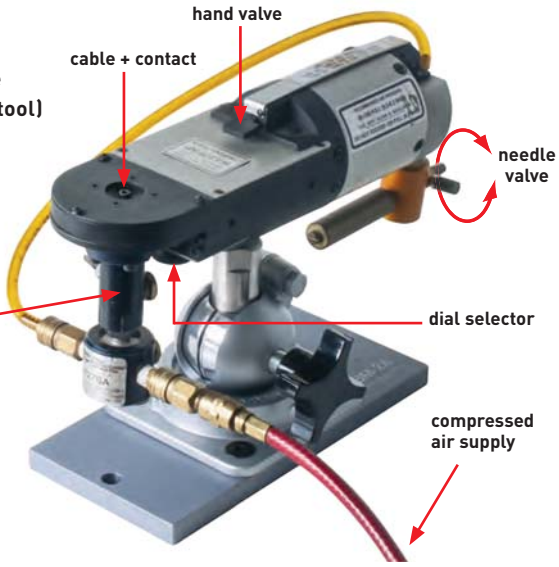

1. General specifications

This is the pneumatic version of the manual crimping tool. Crimping is performed with 8 pressure points. The tool is equipped with a geared mechanism to control the complete crimping cycle. Thanks to the automatic positioner it is possible to crimp simply by inserting the uncrimped contact + wire into the tool crimping cavity. It is also necessary to order the interchangeable positioner inserts relative to the series of contacts to be crimped.
The tool operating pressure is 5,5 - 8,3 bar. It is recommended to utilise an adjustment and air filtering unit.

1.1 Crimping range

Conductor cross-sectional area range: from 0,12 mm² (26 AWG) to 4 mm² (12 AWG).

Fig. A (complete crimping tool)

2. Installation or replacement of a positioner insert

1 Disconnect the workshop compressed air source.
2 Disconnect the air hoses from the automatic positioner (rapid connectors).
3 Remove the connection screws, using the 3,5 mm Allen wrench (supplied with the kit), to separate the automatic positioner from the crimping tool.
The indenters will not reach the fully closed position and the contact will be internally blocked if the geared mechanism is operating correctly.
4 Unscrew the positioner closing housing.
5 Install or replace the proper positioner insert in the positioner housing, replacing the underlying spring.
6 Reverse the operations, as described from point 4 to point 1.

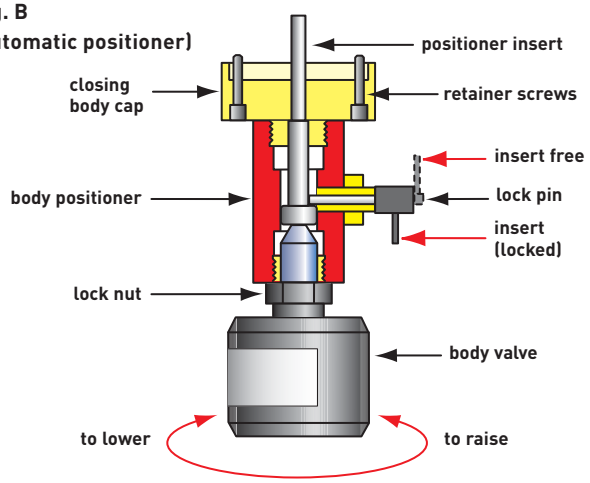

3. Crimping position adjustment (Fig. B)

1 Release the automatic positioner from the crimping tool body (see points 1 and 2 “Installation replacement of a positioner insert”).
2 While holding the body positioner in position using a 19 mm wrench, loosen the lock nut with a 14 mm wrench.
3 Push the positioner insert toward the bottom and lock it using the lock pin.
The indenters will not reach the fully closed position and the contact will be internally blocked if the geared mechanism is operating correctly.
4 If the pin doesn’t lock, unscrew the body valve toward the bottom.
5 With the pin locked, tighten the body valve toward the top until it strikes against the positioner insert.
6 While maintaining that position, tighten the lock nut.
7 Replace and connect the positioner on the crimping tool.
8 Release the lock pin in the “free” position.

4. Checking the crimping complete cycle control mechanism

Correct operation can be checked based on the following procedure:
1 Reduce the pressure to 1 bar.
2 Using a contact that corresponds to the installed positioner, with size 0,5 and a wire with section 0,5 mm², use the crimping tool, referring to the crimping instructions. The indenters will not reach the fully closed position and the contact will be internally blocked if the geared mechanism is operating correctly.
3 To release the partially crimped contact, increase the air pressure of the line to 5,5 - 8,3 bar and again use the crimping tool. It will then complete the crimping, allowing the indenters to return to the fully open position.
The indenters will not reach the fully closed position and the contact will be internally blocked if the geared mechanism is operating correctly.

Fig. B (automatic positioner)

5. Crimping instructions

1 To obtain the suitable selector number, refer to the data plate located on the cover of the positioner insert case, and adjust the dial selector as specified.
2 Insert the contact and the prepared conductor through the opening of the indenter in the crimping tool casing (Fig. A).
3 Exert slight pressure until the crimping tool automatically crimps the contact.
CAUTION: Wire sections less than 0,34 mm² (24 AWG) up to 0,08 mm² (28 AWG) or equivalent are not sufficiently rigid, so that it may be rather difficult to push the contact + wire.
4 Check the position of the crimping on the contact crimping foot. Ideally, the crimping should be between the inspection hole and the top edge of the crimping foot. The head of the contact should not be squared and the inspection hole should be intact.

6. Instructions to check calibration

The operations to check the crimping tool must be carried out with the dial selector in position 4 and the CCPNP gauge.
ATTENTION! Do not crimp the gauge.

6.1 Calibration check

1 Disconnect the compressed air.
2 Push the positioner insert toward the bottom and lock it using the lock pin.
3 Reconnect the compressed air.
4 Turn the needle valve counterclockwise to open the air supply (Fig. A).
5 The indenters will extend and remain in the extracted position until the valve is closed.
6 Check using the gauge, referring to the “go / no go” instructions reported below.
7 When the calibration check has been completed, close the needle valve turning it clockwise (Fig. A).
8 Put the lock pin in the “free” position.
“GO” - Insert the end (green) of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
“NO GO” - Insert the end (red) of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

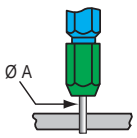

Fig. 1

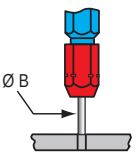

Fig. 2

Gauge	tool selector pos. No.	Ø A ± 0,00254 mm (GO) green	Ø B ± 0,00254 mm (NO GO) red
CCPNP	4	0,991 (mm)	1,118 (mm)
		0,0390 (in)	0,0440 (in)

7. Crimping tool maintenance

No maintenance is required. However, it is good practice to keep the indenter tips free from residual deposits of the coloured band (some types of crimp contacts as per MIL standards are identified by coloured bands in the crimping area) and any other debris. A metal brush may be used for this purpose. The following is strongly recommended:
1. DO NOT immerse the tools in a solution to clean them.
2. DO NOT brush oil in the tools to lubricate them.
3. DO NOT try to disassemble the tool or repair it.
This is a high-precision crimping tool and must be used as such.

removal tool for the extraction of contacts from the inserts for **40A** contacts		**CXES**

Notes:

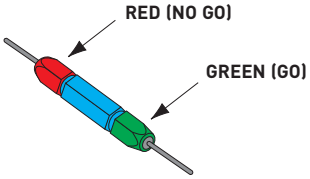

Positioner

- An interchangeable and indispensable accessory of the CXPZP D pneumatic crimping tool, it precisely positions the contact where crimping is performed.

"go / no go" control gauge

- A tool used to periodically check that the crimping tool meets standard requirements.

CRIMPING TOOLS

Use and maintenance instructions

1. General specifications

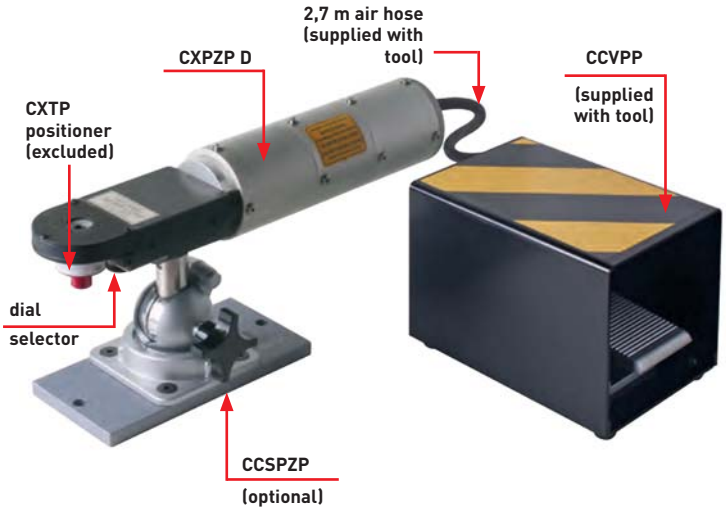

This is the pneumatic version of the CXPZ D hand crimping tool (DANIELS M309). Crimping is performed with 8 pressure points. The tool is equipped with a geared mechanism to control the complete crimping cycle.
The tool must be equipped with the interchangeable positioner CXTP 40 suitable for series CX (or RX HNM version) crimp contacts.
The tool comes already equipped with a pneumatic foot pedal valve (WA10A) attached to the tool through 2,7 m (9 ft.) air hose.
The tool operating pressure is 5,5 – 8,3 bar. It is recommended to utilise a lubrication, adjustment and air filtering unit.

1.1 Crimping range

Conductor cross-sectional area range: from 1,5 mm² (16 AWG) to 10 mm² (8 AWG).

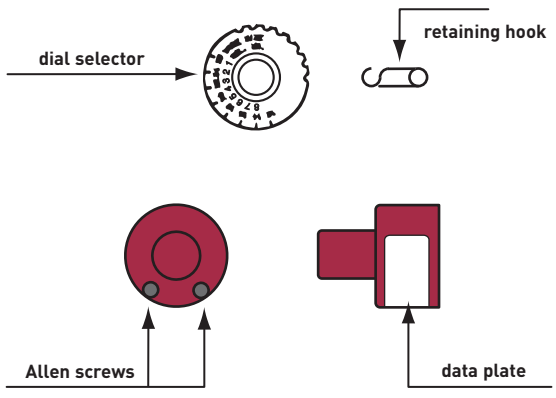

1.2 Operation with pneumatic foot valve (supplied with tool)

Connect the foot valve between the compressed air source and the tool air inlet.

2. CXTP 40 positioner installation

1 Place the CXTP 40 positioner on the support ring located on the crimping tool (matching the special pin on the base of the turret with the corresponding hole on the support ring), aligning the tapped holes with the socket head screws.
2 With the CXTP 40 positioner places against the support ring, tighten the socket head screws with the 3,5 mm Allen wrench (supplied with the kit).
3 Refer to the dataplate on the CXTP 40 positioner. From the column indicating the proper conductor cross-sectional area, determine the number that corresponds to the contact being used.
4 Remove the retaining hook from the crimping tool dial selector.
Lift the dial selector and turn it until the selector number is aligned with the indicator (SEL.NO.). Replace the retaining hook (if necessary).

3. Checking the crimping complete cycle ratcheting control mechanism

Correct operation can be checked based on the following procedure:
1 Install the CXTP 40 positioner (see 2).
2 Reduce the pressure to 1 bar.
3 Using a series CX contact that corresponds to the installed turret, e.g. size 1.5, and a wire with cross-sectional area 1.5 mm2 (16 AWG) use the crimping tool, referring to the crimping instructions.
The indenters will not reach the fully closed position and the contact will be internally blocked if the geared mechanism is operating correctly.
4 To release the partially crimped contact, increase the air pressure of the line to 5,5 – 8,3 bar and again use the crimping tool. It will then complete the crimping, allowing the indenters to return to the fully open position.

4. Removing the CXPT 40 positioner

With the crimping tool in the open position, to disassemble the positioner, loosen the socket head screws using the 3,5 mm Allen wrench (supplied with the kit). After the threads are released from the support ring, pull off the positioner with a straight movement.

5. Releasing a partially crimped contact

To release a partially crimped contact, do the following:
1 Increase the air pressure to 8.5 bar and use the crimping tool. If the increase in air pressure does not release the contact, do the following.
2 Turn the dial selector clockwise to the highest lockable setting (the dial selector must be in the blocked position before continuing). Use the crimping tool.
3 If it does not release after several attempts, contact the ILME offices.

6. Crimping instructions

1 Insert the contact and the prepared conductor through the opening of the indenter in the turret positioner.
2 Activate the hand valve or the foot valve.
Once crimping has been completed, the tool will return to the open position.

3 Check the position of the crimping on the contact crimping foot. Ideally, the crimping should be between the inspection hole and the top edge of the crimping foot.
The head of the contact should not be squared and the inspection hole should be intact.

7. Instructions to check calibration

The operations to check the crimping tool must be carried out with the dial selector in position #5 and the CXPNPP gauge (DANIELS G1005 – formerly G425, which is equivalent).
CAUTION! Do not crimp the gauge.

7.1 Calibration check

Put the crimping tool in the completely closed position.
"GO" - Insert the end (green) of the gauge as shown (Fig. 1).
The gauge must pass freely between the indenter tips.
"NO GO" - Insert the end (red) of the gauge as shown (Fig. 2).
The gauge should not pass through the opening.

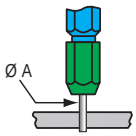

Fig. 1

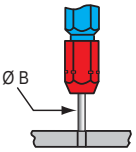

Fig. 2

Gauge	tool selector pos. No.	Ø A ± 0,00254 mm (GO) green	Ø B ± 0,00254 mm (NO GO) red
CCPNP	4	0,991 (mm)	1,118 (mm)
		0,0390 (in)	0,0440 (in)

8. Crimping tool maintenance

No maintenance is required. However, it is good practice to keep the indenter tips free from residual deposits of the coloured band (some types of crimp contacts as per MIL standards are identified by coloured bands in the crimping area) and any other debris. A metal brush may be used for this purpose.
The following is strongly recommended

1 DO NOT immerse the tools in a solution to clean them.
2 DO NOT brush oil in the tools to lubricate them.
3 DO NOT try to disassemble the tool or repair it.

This is a high-precision crimping tool and must be used as such.

Supplied with the following accessories:

- 1 vibrating conveyor feeder bowl for CD contact series
- 1 vibrating conveyor feeder bowl for male CC contact series
- 1 vibrating conveyor feeder bowl for female CC contact series
- 1 feeder tube (contact passage from vibrating conveyor to machine) for CD contact series
- 1 feeder tube (contact passage from vibrating conveyor to machine) for CC contact series
- 1 contact holder (in crimping position) for male CD contact series
- 1 contact holder (in crimping position) for female CD contact series
- 1 contact holder (in crimping position) for CC contact series
- 1 contact stop for CD contact series
- 1 contact stop for CC contact series
- 1 wire holder for 0,34 mm² cables
- 1 wire holder for 0,5 to 1,5 mm₂ cables
- 1 wire holder for 2,5 mm² cables
- 1 “GO / NO GO” control gauge
- 1 Allen wrench for setup operations
- 1 set of spacers to regulate the stripping length
- 1 removal tool to extract contacts from the crimping chamber

Use and maintenance instructions

General specifications

The **Zoller+Fröhlich AM-03** Universal stripping-crimping machine is a semi-automatic, electro-pneumatically operated bench machine used to quickly and reliably strip flexible copper wires and to crimp loose, turned crimp male and female, CD series (10A max) and CC series (16A max) contacts in a single run.
The contacts are automatically fed by means of a vibro-conveyor unit fitted on the top section of the machine.
The machine carries out the crimping operation with four, eight pressure point indenters, in compliance with the requirements set out in the MIL-C-22520/1 standard.
The stripping depth and crimping depth adjustment is controlled by a software controlled motor. Up to 50 different combinations may be stored and retrieved from the program; these combinations are useful, for example, to meet different requirements related to the wire insulator type and thickness.
The adjustment and programming operations are carried out by using the keypad located on the front panel. The LCD display shows all the functions, the main information and any errors.
The machine is fitted with devices used to check that the crimping cycle has been completed.
The general safety instructions described in the machine user and maintenance manual must be followed and the use of the machine should only be restricted to qualified and trained personnel.

Crimping range

Wire section: from 0,34 mm² (AWG 26) to 2,5 mm² (AWG 14).

Description of the machine

To ensure a correct operation, the machine must be positioned on a hard bench, which does not amplify the effects of the internal movements occurring inside the machine. The machine consists of a vibrator which loads the contacts, of a tube which feeds the contacts and of a motorised wire stripping and contact crimping unit.
For each type and size of contact, the machine is provided with a factory stored preset program (see the machine user manual), which may be customised at any time.
The program allows the user to:
load, edit and save a program, as well as check/edit the stripping length and depth and the crimping depth.

Warning: when the machine is switched on, the working program is always the last program used.
The machine electronics adjustment is carried out by means of the keypad.
Select one of the 12 programs (see table on page 728) according to the contact used *.
Each program stores the stripping and crimping depth.
The stripping depth is the measurement in mm of how much the stripping blades must penetrate the insulator to strip it off, and depends on the type of cable used.
The crimping depth is the measurement in mm of how much the four indenters must penetrate the contact at the end of the crimping operation.
This depth depends on the size and shape of the contact (crimp shaft thickness) and determines the quality of the crimping operation in terms of gas tightness and resistance to tensile stress.

* Note: The machine also has a 12C program suitable for 10A, 2,5 mm² crimp contacts with 6 mm stripping length.
This program is therefore unsuitable for ILME CD series contacts (stripping length 8 mm).

Operational setups

The tool carrier carriage may be accessed by opening the front door, by anticlockwise rotation of the knob, which releases the pressure from all the valves.
For tool selection, see table on page 728.
- For CD series male and female crimp contacts (10A max), the feeding cup A must be fitted onto the machine, whilst for CC series crimp contacts (16A max) feeding cup B (M) for male contacts and B (F) for female contacts must be used.
- The feeding tubes to be fitted are A for CD series contacts and B for CC series contacts respectively.
- The wire holders which support the wire during the stripping stage feature three different sizes for CD contacts and two sizes for CC contacts.
- The contact holders are two (A (M) for male contacts and A (F) for female contacts) for CD series contacts, according to the different rear diameter between male and female contacts in this series, whilst there is only one holder (B) for CC series contacts.
- The contact holder is A for CD series contacts and B for CC series contacts.

Feeding the wire

The wire must be cut straight and the single braids must not be bent or pulled apart; in particular, the first 4cm must be perfectly straight.

Checking the stripping depth:

The machine can be operated simply as a stripping machine by disabling the crimping operation.
Please refer to the machine user manual.

Maintenance and repairs

Stripping residues collection tray: empty the tray approximately every 2000 cycles (the frequency depends on the sizes of the stripped wire and on the stripping length).
Pneumatically controlled maintenance unit: regularly drain any water that may have collected.
The trap may be cleaned with water.
To remove the trap, simply disconnect the air supply.
The filter unit may be unscrewed for cleaning purposes, then immerged in a cleaning agent (such as petrol or oil), thoroughly washed and dried.

Checking the calibration values

The correct calibration of the machine must be periodically checked by using the “GO / NO GO” caliper supplied as standard with the machine, by following the procedure described in the machine user and maintenance manual.

CLDL

CLC1 / CLC4

CLSG

CLSP

CLTE

Use and maintenance instructions

General specifications

Strip the fibre about 12 mm for male contact and about 15 mm for female contact (see Figures 1 and 2).

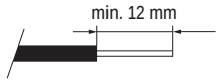

Fig. 1 - Example of cable stripping for male crimp contact

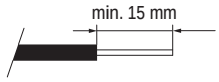

Fig. 2 - Example of cable stripping for female crimp contact

Crimping instructions

- The data sheet for crimping tool CLPZ R explains how the crimping tool works and how to adjust the crimping depth and locator for the contacts to be crimped. Position the turret on 3, push and turn of 90° the knob of turret. Adjust the crimping depth on 2 (unscrew the allen screw, after adjusting refix the screw). For the female contact: unscrew the back of the contact, pull out the internal central part; on Figure 3 is indicated the crimping area (front part of contact). For male contact: crimp the front part of contact.
- Push the stripped fibre as far as possible into the contact sleeve so that it protrudes approx. 1 mm from the tip of the contact.

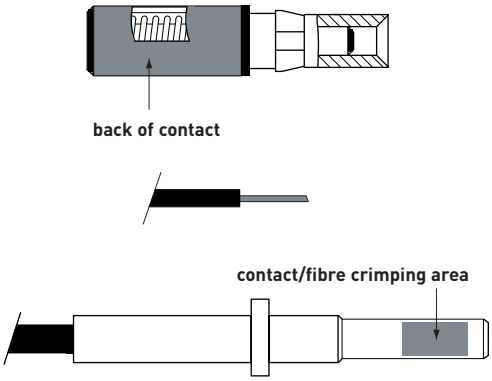

Fig. 3 - Female contact/fibre crimping area

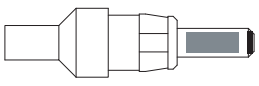

Fig. 4 - Male contact/fibre crimping area

- Insert the contact together with the fibre optic cable as far as possible into the crimping opening of the crimping tool (CLPZ R, see Figure 5) while applying gentle pressure to the fibre optic cable and connector, close the tool until you hear it disengages.

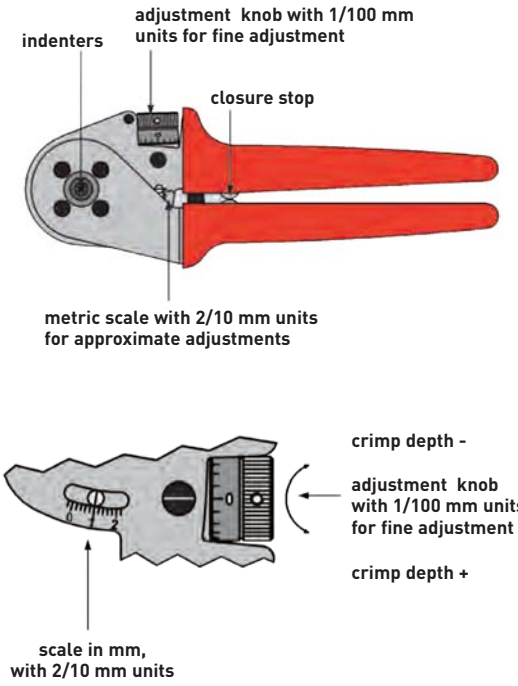

Fig. 5 - Manual crimping tool

Finishing the front surface

- Insert the contact into the polishing disc (CLDL) as shown in Figure 6. Work on a smooth surface (such as a sheet of glass), use grade 1000 polishing paper to grind off the protruding fibre and polish it with grade 4000 polishing paper.
- Wipe away any residue remaining after grinding. The best optical attenuation values are achieved when a wet grinding method is used.

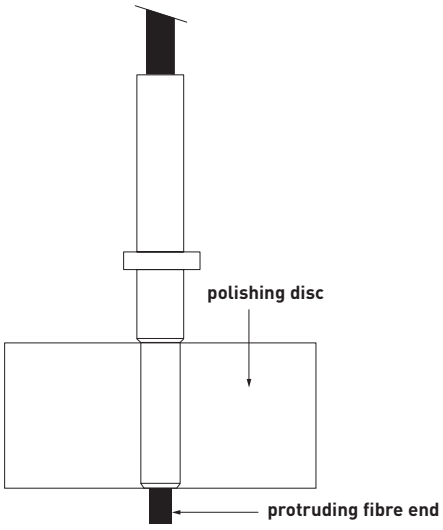

Fig. 6 - Polishing Disc with Guide for Connector Sleeve

Final mounting instructions

Screw the back female part contact. Put inside the CX 04 LF/ CX 04 LM insert.

Use and maintenance instructions

Finishing the front surface of the fibre optic

- Before crimping, insert POF fibre optic into the polishing disc (CLDL DD) as shown in Fig. 1.
- Work on a smooth surface (such as a sheet of glass), use grade 1000 polishing paper to grind off the protruding fibre and polish it with grade 4000 polishing paper.
- Polish making 8-shape circles.
- Wipe away any residue remaining after grinding.

The best optical attenuation values are achieved when a wet grinding method is used.

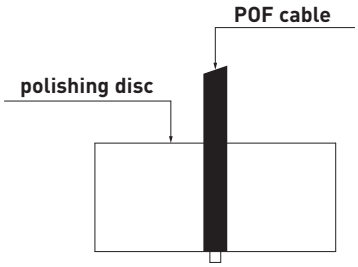

Fig. 1 - Polishing Disc with Guide for POF fibre

General specifications

Strip the fibre 19 mm for male contact and 14 mm for female contact (refer to Figures 2 and 3).

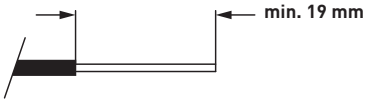

Fig. 2 - Example of cable stripping for male crimp contact

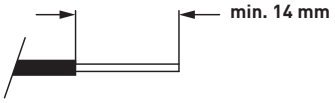

Fig. 3 - Example of cable stripping for female crimp contact

Crimping instructions

- The CLPZ R crimping tool data sheet explains how the crimping tool works and how to adjust the crimping depth and locator to crimp the contacts as shown in Fig. 4.
- Select position no. 1 on the turret (for male contact) and no. 2 (for female contact), push and turn of 90° the knob of the turret.
- Adjust the crimping depth on 1,45 (unscrew the allen screw, after adjusting refix the screw).
- Insert the contact together with the fibre optic cable as far as possible into the crimping opening of the crimping tool (CLPZ R, refer to Fig. 5) while applying gentle pressure to the fibre optic connector, close the tool until you hear it disengages.

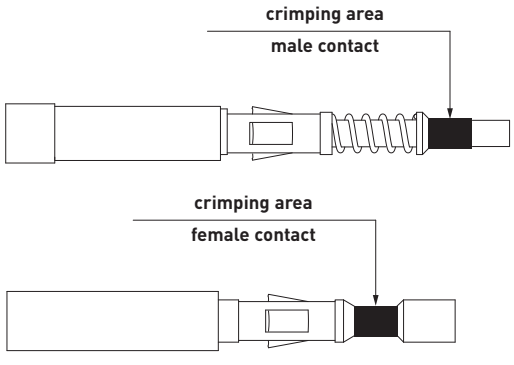

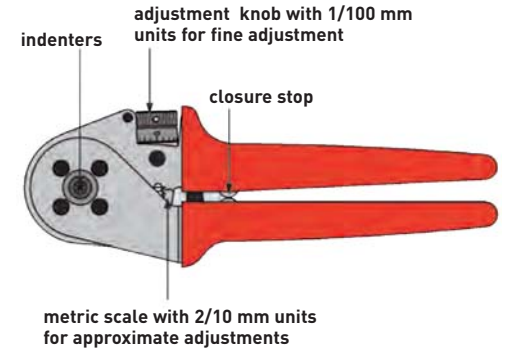

Fig. 4 - Crimping area

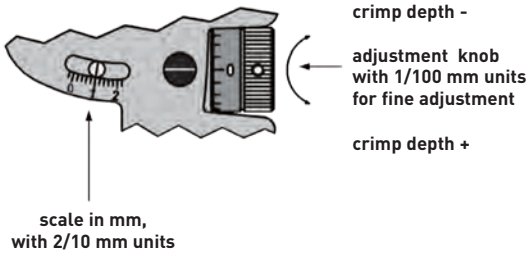

Fig. 5 - Manual crimping tool

Final mounting instructions

Screw the back female part contact. Put inside the CD/CDD/CX insert.

Crimping instructions
1) Strip the cable as per drawing using the tool COST.
2) Crimp the central contact of coaxial connector in the correct crimping area with the position 0,72 of crimping tool COPZ.
3) Insert the brass back end on the cable.
4) Insert the central contact in the coaxial connector, put the braid shield around the back cylinder of contact.
5) Insert the brass back end on the braid shield.
6) Crimp the ferrule with position 3,25 of crimping tool COPZ.

We recommend the use of code pins CRF CX / CRM CX.
fit the brass tube on the cable
As alternative to crimping, it is possible to solder the central contact.

reopening tool for **SQUICH®** actuator button	**CSHES**

It allows the release of the connection from a SQUICH® terminal without disassembly of the connector insert from the bulkhead mounting housing, by operating from the accessible rear side of the control panel.
With mains power disconnected (connector not under voltage), the smoothed hook-shaped tool tip is inserted in the slot of the actuator button head of the corresponding terminal, then by a delicate tilt towards the centre of the connector, the tools acts as a lifting lever for the actuator button, releasing the wire.

CAUTION: Not suitable for SQUICH® terminals of CKSH inserts or MIXO CX 05 SH modular inserts.

Use and maintenance instructions

Hydraulic operating instructions (CCW PD ..)

1. Screw the short thread of the 13,0/11,0 mm draw stud ❸ into the ¾" UNF adaptor ❼ (CCW PD 03/03 G only).
2. Screw the 13,0/11,0 mm draw stud ❸ complete with the ¾" UNF adaptor ❼ onto the hydraulic cylinder or screw the short thread of any of the larger draw studs ❸ (without the adaptor) directly onto the hydraulic cylinder (CCW PD 03/03 G only).
3. Put the die ❹ onto the draw stud ❸ and move it towards the hydraulic cylinder. If necessary, place the spacer ❻ between the hydraulic cylinder and die ❹.
4. Insert draw stud ❸ with pre-mounted die through the pilot hole in the sheet until the die abuts the sheet.
5. Place the punch ❷ onto the draw stud and move it towards the sheet until it abuts the sheet.
6. Screw the counter nut ❶ onto the thread of the draw stud ❸.
7. Adjust punch rectangularly (4 marks on die) and tighten counter nut manually.

Punching

8. Operate hydraulic punch CCW CT driver until punch is drawn through sheet.
9. Depressurise hydraulic punch driver after punching.
10. Remove the counter nut ❶ and punch ❷ from the draw stud ❸.
11. Remove the die ❹ from the draw stud ❸ and remove slugs from the die ❹.

Drilling mounting holes

When punching, the position of mounting holes are marked. Use suitable spiral drill to drill mounting holes.

Manual operating instructions (CCW PD 03/..03 G/..03 IVG/ and ..1M)

Knockout punch mounting

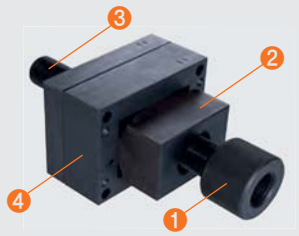

1. Screw the ball-bearing nut ❺ onto the long thread of the draw stud 13,0/11,0 mm ❸. Put the die ❹ onto the draw stud ❸ and move it towards the ball bearing nut ❺.
2. For further steps refer to hydraulic operating instructions steps 4 to 7.

Punching

3. Use screw wrench SW 24 to rotate ball-bearing nut ❺ until punch is drawn through sheet.
4. For further steps refer to hydraulic operating instructions steps 10 to 11.

Prior to commisioning please read operating instructions
Components under voltage must not be machined.
Prior to operating ensure de-energised state of the work environment (e.g. switch cabinet) or the material to be machined.

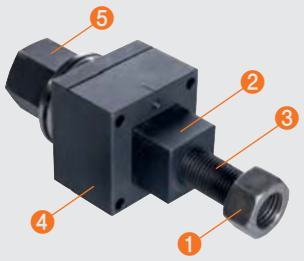

Hydraulic operating CCW PD.. (except CCW PD 03/ 03 G)

Hydraulic operating (CCW PD 03G/..03 IVG/..1M and CCW M32)

Manual operating (CCW PD 03/..03 G/..03 IVG/ and ..1M)

Dimensioning of clearances and creepage distances

European standard EN 61984:2009 which incorporates without modification the corresponding international standard IEC 61984 Ed. 2.0 (2008-10) is the reference standard for safety requirements and the relevant tests for multipole connectors for industrial uses.

It is applicable to connectors with rated voltage values of over 50 V, and up to 1 000 V, and rated currents values of up to 125 A per pole, for which no dedicated standard exists, or to which the detail specifications or the manufacturer refer as regards the safety aspects. It can be used as a guide for connectors with rated current exceeding 125 A per pole and for those with a rated voltage up to 50 V (the latter excluded from the scope of the Low Voltage Directive 2014/35/EU).

The last edition of the EN 61984 standard also introduced the definition of connector without breaking capacity (COC) to better distinguish this category of products from connectors with breaking capacity (CBC).

For the safety and performance requirements of connector terminals, which depend on the connection technology adopted, this standard integrally refers to the corresponding standards (EN IEC 60999 series for screw-type and screwless type terminals, EN IEC 60352 series for solderless connections and relevant terminations).

For determining the minimum clearances and creepage distances (i.e. distances through-air and along the insulating surface) for connectors, this standard now refers, without any modifications to standard IEC 60664-1 Ed. 2.0 (2007-04)[1].

In the following, the method for determining the minimum insulation in connectors is illustrated with reference to the IEC 60664-1 standard. The rated characteristics of each ILME connector family are provided on pages 14-19. As already in the first edition, the following are now obsolete: the insulation group concept and the distinction of rated voltage values into DC and AC, voltage values 220 V and 380 V were adapted to standardised values 230 V and 400 V according to IEC 60038[2] and some concepts were taken from the regulations for LV electrical systems of the IEC 60364[3] series, such as:

a. the overvoltage category (I, II, III, IV), according to the use of the equipment[4]: this is correlated with the transient overvoltages taken as a basis for determining the rated impulse voltage;
b. the pollution degree (1, 2, 3);
c. the material group (I, II, III) classification of insulating materials according to their resistance to tracking;
d. the electric field condition *(homogenous or inhomogeneous)*.

a. Overvoltage categories (or impulse withstand category)

The overvoltage category of a circuit or of an electrical system is identified by a conventional numeral (from I to IV) based on the limitation or the control of the assumed transient overvoltage values obtained on a circuit or electrical system and depends on the means used to reduce the overvoltages.

Table F.1 provides the rated impulse voltage for equipment energised directly from the low voltage mains as a function of the rated voltage of the power supply system, of the relevant line-to-neutral voltage and of the overvoltage category.

TABLE F.1.
Rated impulse voltage for equipment powered directly from the low-voltage mains (IEC 60664-1 Ed. 2.0 2008-10)

Nominal voltage according to IEC 60038 (CENELEC HD 472 S1, CEI 8-6)		Voltage line to neutral derived from nominal voltages a.c. or d.c.	Rated impulse voltage [b] Overvoltage category			
V	V	≤	V			
Three -phase [a]	Single phase		I	II	III	IV
		50	330	500	800	1500
		100	500	800	1500	2500
	120-240	150	800	1500	2500	4000
230/400 277/480		300	1500	2500	4000	6000
400/690		600	2500	4000	6000	8000
1000		1000	4000	6000	8000	12000

a) The "/" symbol indicates a four-wire three phase distribution system (star distribution). The lower value is the voltage between phase and neutral (phase voltage), whereas the higher value is the voltage between the phases (mains voltage). Where only one value is indicated, it refers to three-wire, three-phase systems (delta distribution) and specifies the line-to-line value.
b) Equipment with these rated impulse values can be used in installations in accordance with standard IEC 60364-4-443 (Italian standard CEI 64-8/4 Section 443, German DIN VDE 0100-443).

Industrial machinery and installations with fixed connection to the low voltage supply system, hence their relevant components including multipole connectors, constitute an example of equipment belonging to overvoltage category III.

Examples of general equipment that comes under overvoltage category II are household electrical appliances, portable tools and other household or similar equipment.
For distribution networks with rated voltage 230/400 V (star distribution, neutral-earthed) and overvoltage category III (impulse withstand category III), the required rated impulse withstand voltage is 4 kV.
For distribution networks with rated voltage 400 V or 500 V (star distribution without neutral or with unearthed neutral, or delta distribution unearthed or corner-earthed) and overvoltage category III (impulse withstand category III), the required rated impulse withstand voltage is 6 kV.

b. Pollution degree

Pollution indicates the presence of any kind of foreign matter, whether solid, liquid or gaseous (ionised gas) that can result in a reduction of dielectric strength or surface resistivity of the insulation. The standard establishes four pollution degrees. The categories are identified by conventional numerals based on the quantity of polluting agents or on the frequency of the phenomenon which determines the reduction of the dielectric strength and/or of the surface resistivity.

Pollution degree 1
No pollution or only dry, non-conductive pollution. The pollution has no influence.

Pollution degree 2
Only non-conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is to be expected.

1) Endorsed with modifications as European standard EN 60664-1:2007 and published by CENELEC member countries as a national standard: Italian standard CEI EN 60664-1:2008-04 (CEI 109-1), German standard DIN EN 60664-1:2008-01 (VDE 0110-1)
2) EN 60038:2011 (IEC 60038-2009, modified), Italian standard CEI EN 60038:2012-08 (CEI 8-6), German standard DIN EN 60038:2012-04 (VDE 0175-1)
3) Italian standard CEI 64-8, German standard DIN VDE 0100
4) EN 60664-1 clarifies that the term "overvoltage category" is synonymous with "impulse withstand category" used in Clause 443 of IEC 60364-4-44

Pollution degree 3
Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be expected.

Pollution degree 4
Continuous conductivity occurs due to conductive dust, rain or other wet conditions.

Pollution degree 3 is typical of an industrial environment or similar, while pollution degree 2 is typical of a household or similar environment.

EN 61984 allows the dimensioning of creepage distances (insulating distances along the surfaces) of connectors installed in enclosures with degree of protection ≥IP54 for the pollution degree immediately below that of the application environment (e.g.: 2 instead of 3).

Abstract from EN 61984
6.19.2.1 For a connector with a degree of protection IP54 or higher according to IEC 60529, the insulating parts inside the enclosure may be dimensioned for a lower pollution degree.
This lower pollution degree also applies to mated connectors where the enclosure is ensured by the connector housing and which may only be disengaged for test and maintenance purposes.

One may therefore use connectors installed in housings or enclosures with a degree of protection ≥ IP54, at the rated voltage suitable to pollution degree 2 in industrial applications with pollution degree 3, if, in compliance with EN 61984, the connector coupling is opened only occasionally for test and maintenance purposes. Even in the event of temporary or limited permanence in uncoupled state, a closing cover is recommended in order to guarantee at least the IP54 degree of protection.
However, this does not apply to connectors which remain uncoupled and exposed to an industrial atmosphere for an indefinite period.
It should also be noted that pollution might penetrate inside coupled connectors also from remote parts of the electrical system, e.g. through conduits providing cable entry to the connectors enclosure.
Moreover, connector enclosures are usually supplied without cable entry devices, to let the installer select the most suitable one for its end-use application. The IP degree of protection – or the Type rating according to North American standards – marked or assigned to the connector enclosures is guaranteed only for mated and locked connectors that employ cable entry devices with IP degree and/or Type rating equal or higher than those of the connector enclosures chosen, installed in a workmanlike manner.

Examples of application for the selection of pollution degree 2 for a connector.
- Connector on an electric motor controller, which is uncoupled only to replace a faulty motor, also in cases where pollution degree 3 is instead specified for the system.
- Connector on a machine built in modules, which is opened only for transport purposes and which is used only for faster installation and for safer putting into service. One must make sure that the connector has not been polluted during transport. To ensure this has not occurred, protective covers or adequate packing must be used.
- Connector inside a panel with degree of protection ≥ IP54. In this case one may even avoid equipping the connector with an IP54 enclosure.

c. Material group

The insulating material influences the determination of the minimum creepage distance. It is characterised according to the damage it suffers from the concentrated release of energy during scintillations when a surface leakage current is interrupted due to the drying of the contaminated surface.

The CTI (comparative tracking index, index of resistance to surface currents, defined in EN IEC 60112) is assumed as index of the resistance to creep currents of the insulating materials in the presence of atmospheric contaminating agents.

The CTI constitutes the numerical value of the maximum voltage at which a material can resist against 50 drops of an electrolytic test solution without tracking failure, i.e. without failure of insulation due to a progressive formation of conductive paths on the surface and/or within the solid insulating material (causing permanent electric arc between the electrodes of the test equipment) due to the combined effect of electric stress and electrolytic contamination.

Solid insulating materials are classified into four groups:

group I	**600 ≤ CTI**
group II	**400 ≤ CTI < 600**
group IIIa	**175 ≤ CTI < 400**
group IIIb	**100 ≤ CTI < 175**

For the purpose of determining the minimum creepage distances, the values for groups IIIa / IIIb (Table F.2, IEC 60664-1) are identical.

The insulating materials used to manufacture the ILME multipole connectors belong to groups IIIa / IIIb.

d. Electric field conditions

Minimum clearance (shortest distance in air between two conductive parts) is determined by Table F.2 of IEC 60664-1, bearing in mind the following influencing factors:

- the rated impulse voltage;
- the electric field condition;
- the altitude: the values specified in Table 2 are valid up to 2 000 m; for higher altitudes, the corrective factors specified in Table F.8 of IEC 60664-1 shall be used;
- the micro-environment.

The shape and arrangement of the conductive parts influence homogeneity of the electric field, hence the clearance able to insulate live parts. Clearances of case A (inhomogeneous field) withstand the corresponding impulse voltage under all conditions: clearances not less than those specified in Table F.2 – case A can be used irrespective of the shape and arrangement of the conductive parts and without verification by an impulse test.

1. Determination of clearances

To determine minimum clearance, the following must be identified in accordance with IEC 60664-1 standard:

a) the rated voltage of the power supply (usually 230/400 V thus a conventional voltage line-to-neutral of 300 V, in star distribution networks with earthed neutral, or 400 V for star networks without neutral, or with unearthed neutral, or in networks with secondary windings of the distribution transformer delta connected, unearthed or corner-earthed and, therefore, with conventional line voltage 600 V);

b) the overvoltage category (usually III).

c) The rated impulse voltage determined from Table B.2 of IEC 60664-1 (usually 4 kV or 6 kV).

d) The electric field condition to which the parts through which the current flows shall be subjected (worst case = inhomogeneous field) and the pollution degree (usually 3).

EN 61984 requires that the clearance be dimensioned according to IEC 60664-1. For clearances up to 2 mm, typically for printed circuit board connectors, the reference standard may alternatively be IEC 60664-5, to be read in conjunction with IEC 60664-1. The minimum clearance (shortest distance in air between two conductive parts) is therefore given by Table F.2 of IEC 60664-1, according to the rated impulse voltage derived from Table B.2 of the same standard, which is part of Annex B (informative) Nominal voltages of supply systems for different modes of overvoltage control. This table is attributable in particular to devices that do not foresee upstream any overvoltage surge arrester; it represents, therefore the "worst case" and replaces Table 5 of the previous edition of EN 61984. The rated impulse voltage must be chosen based on the nominal supply voltage and the overvoltage category. The assignment of connectors to a particular overvoltage category (usually III) is performed according to the rules of IEC 60664-1.

Here below three important definitions from EN 61984 to consider regarding "voltage":

rated voltage
value of voltage assigned by the manufacturer to the connector and to which the operating and performance characteristics are referred

NOTE – A connector may have more than one rated voltage value.

[IEC 60664-1:2007, definition 3.9, modified].

rated impulse voltage
impulse withstand voltage assigned by the manufacturer to the connector, characterizing the specified withstand capability of its insulation against transient overvoltages

[IEC 60664-1:2007, 3.9.2, modified].

impulse withstand voltage
highest peak value of impulse voltage of prescribed form and polarity which does not cause insulation breakdown of insulation under specified conditions

NOTE – The impulse withstand voltage is equal to or higher than the rated impulse voltage

[IEC 60664-1:2007, 3.8.1, modified].

In regard to the choice of the electric field condition, the clearances through possible windows and openings in the insulating material housings, shall comply with the values of Case A of Table F.2 of IEC 60664-1, i.e. for inhomogeneous field conditions.

TABLE B.2
Inherent control or control of equivalent protection [IEC 60664-1 Ed.2.0 (2007-04)].

60	90	90	90	27	27	27
80	130	130	130	35	35	35
100	170	170	170	45	45	45

1) This voltage is
- — for functional insulation, the maximum impulse voltage expected to occur across the clearance (see 5.1.5),
- — for basic insulation directly exposed or significantly influenced by transient overvoltages from the low-voltage mains (see 4.3.3.3, 4.3.3.4.1 and 5.1.6), the rated impulse voltage of the equipment,
- — for other basic insulations (see 4.3.3.4.2), the highest impulse voltage that can occur in the circuit.

For reinforced insulation see 5.1.6.

2) Preferred values as specified in 4.2.3.

3) For printed wiring material, the values for pollution degree 1 apply except that the value shall not be less than 0,04 mm, as specified in Table F.4.

4) The minimum clearances given for pollution degrees 2 and 3 are based on the reduced withstand characteristics of the associated creepage distance under humidity conditions (see IEC 60664-5).

5) For parts or circuits within equipment subjected to impulse voltages according to 4.3.3.4.2, interpolation of values is allowed. However, standardization is achieved by using the preferred series of impulse voltage values in 4.2.3.

6) The dimensions for pollution degree 4 are as specified for pollution degree 3, except that the minimum clearance is 1,6 mm.

When the clearance is less than the value indicated for case A, an impulse voltage test is required.

Compared to the previous edition of IEC 60664-1, Table F.2 has been modified. In particular: the columns referring to pollution degree 4 have been removed, the definition of this pollution degree has been modified in 4.6.2 to: *"continuous conductivity occurs due to conductive dust, rain or other wet conditions"*, and clearances for pollution degree 4 area as specified for degree of pollution 3, with the exception that the minimum clearance is 1,6 mm.

In 4.6.3 it states: *"The dimensions for creepage distance cannot be specified where permanently conductive pollution is present (pollution degree 4). For temporarily conductive pollution (pollution degree 3), the surface of the insulation may be designed to avoid a continuous path of conductive pollution, e.g. by means of ribs and grooves (see 5.2.2.5 and 5.2.5)".*

The values in bold are the most common in multipole connectors for industrial purposes.

If the component fulfils the minimum clearance prescribed for live parts at opposed polarities, it is exempted from the impulse withstand test. This test is run at sea level using increased voltage values in order to take into account rarefied air at high altitude (the prescribed values refer to 2 000 m a.s.l.). However, if this minimum clearance is not fulfilled, passing the test gives one the right to declare the relevant rated impulse voltage. Declaration of the rated impulse voltage is optional according to EN 61984: if the manufacturer declares the rated impulse voltage, the impulse withstand test is necessary as dielectric verification.

Alternatively, a dielectric voltage withstand test at mains frequencies of 50/60 Hz for 60 s (test 4a of IEC 60512) is necessary, but at reduced values compared to the peak values of the impulse test voltages of wave shape standardised at 1,2/50 µs.

For this purpose, standard EN 61984 provides the following cross-reference table:

TABLE 8

Test voltages (EN 61984 Ed. 2.0 - 2009-06)

Rated impulse withstand voltage $\frac{U_{ipm}}{kV}$	Test voltages		
	Impulse withstand voltage* kV (1.2/50 µs)		Withstand voltage (r.m.s. value) kV (50/60 Hz)
	at 2000 above sea level	at sea level	
0,5	0,5	0,55	0,37
0,8	0,8	0,91	0,5
1,5	1,5	1,75	0,84
2,5	2,5	2,95	1,39
4	4	4,8	2,21
6	6	7,3	3,31
8	8	9,8	4,26
12	12	14,8	6,6

* If the test laboratory is situated between sea level and an altitude of 2 000 m a.s.l., interpolation of impulse withstand voltage is allowed.

NOTE: This table uses the characteristics of an inhomogeneous field, case A of IEC 60664-1 (worst case).

2. Determination of minimum creepage distance

For the minimum creepage distance (*shortest distance along the surface of a solid insulating material between two conductive parts*, IEC 60664-1 definition 3.3) IEC 61984 refers to what prescribed by IEC 60664-1 in Table F.4. It is determined according to: rated voltage, pollution degree and insulating material group.

The rated voltage providing access to Table F.4 (rationalised voltage derived from the nominal voltages at which the connector is deemed to operate) is determined by Table F.3a of IEC 60664-1 for single-phase two or three-wire AC or DC systems or Table F.3b for three-phase three or four-wire AC systems.

TABLE F.3a

600 **)	630	-
480-960	1000	500
1000 **)	1000	-

1) The line-to-earth insulation level for unearthed or impedance-earthed lines is equal to that between lines (phases), because the operating voltage of any line (phase) can, in practice, approach full voltage between lines (phases) [line voltage]. This is because the actual voltage to earth is determined by the insulation resistance and by the capacitive reactance of each line-to-earth. Consequently, a low (but acceptable) insulation resistance of a line can, in effect, earth it and increase voltage to earth of the other two phases at full voltage between the lines [line voltage].
2) For equipment for use on both three-phase three-wire and three-phase four-wire AC systems, earthed or unearthed, use only the values for three-wire systems.

*) It is assumed that the rated voltage of the equipment is not less than this value.
**) These values correspond to the values given in Table F.1.

Usually for three-phase systems with 230/400 V nominal voltage, the conventional line-to-line insulation voltage is 400 V and the line-to-earth for TT or TN systems is 250 V.

For three-phase systems with 400 V or 500 V nominal voltage, the conventional line-to-line insulation voltage is respectively 400 V and 500 V.

The pollution degree must be specified according to IEC 60664-1.

This strongly influences the rated insulation voltage of a connector. Therefore, the rated insulation voltage of a connector should be reconsidered time by time for each pollution degree.

1) This voltage is
- for functional insulation, the working voltage,
- for basic and supplementary insulation of the circuit energized directly from the supply mains (see 4.3.2.2.1), the voltage rationalized through Table F.3a or Table F.3b, based on the rated voltage of the equipment, or the rated insulation voltage,
- for basic and supplementary insulation of systems, equipment and internal circuits not energized directly from the mains (see 4.3.2.2.2), the highest r.m.s. voltage which can occur in the system, equipment or internal circuit when supplied at rated voltage and under the most onerous combination of conditions of operation within equipment rating.

2) Material group IIIb is not recommended for application in pollution degree 3 above 630 V.
3) Provisional data based on extrapolation. Technical committees who have other information based on experience may use their dimensions.
4) The values given in brackets may be applied to reduce the creepage distance in case of using a rib (see 5.2.5).
NOTE – The high precision used in indicating creepage distances in this table does not mean that the uncertainty of measurement has to be of the same order of magnitude.

In boldface the typical values for multipole rectangular connectors for industrial uses are shown.

EU environmental legislation

RoHS 2 (2011/65/EU) and WEEE 2 (2012/19/EU) Directives

The RoHS 2 2011/65/EU Directive (recast) replaced on 2013-01-03 the original RoHS 2002/95/EC Directive (with its later amendment 2008/35/EC).

This Directive introduced the ban of use of certain hazardous substances in new electrical and electronic equipment (end products) placed on the market from 1st of July 2006 (the exceptions for some applications were listed in Annex of the Directive and in a number of further Decisions of the EU Commission). Indirectly – in the supply chain – the ban also applied to the electrical components of said electrical and electronic equipment.

The banned and/or restricted substances originally were:

Lead (Pb) (0,1 %), Mercury (Hg) (0,1 %), Cadmium (Cd) (0,01 %), Hexavalent Chromium (Cr^{6+}) (0,1 %), Poly-brominated biphenyls (PBB) (0,1 %) and Poly-brominated diphenyl ethers (PBDE) (0,1 %) (the latter two being families of flame retardants for thermoplastic materials)

to which the Commission Delegated Directive 2015/863/EU of 2015-03-31 added – with a period of grace of six and a half years – the following ones:

Bis(2-ethylhexyl) phthalate (DEHP) (0,1 %), Butyl benzyl phthalate (BBP) (0,1 %), Dibutyl phthalate (DBP) (0,1 %), Diisobutyl phthalate (DIBP) (0,1 %).

All ILME finished products (industrial electrical equipment) as well as all ILME components (for industrial electrical equipment) in the sense of the Directive are in conformity with the RoHS 2 2011/65/EU Directive and all subsequent modifications within the terms of its scope and the starting dates (transitional periods) established for each category of EEE (electrical and electronic equipment) covered in Annex I of said Directive.

For all components (connector inserts, removable crimp contacts, enclosures for connectors, and accessories related to connectors as far as they are in the scope) the products comply with the limit values for certain substances as set out in said RoHS 2 2011/65/EU Directive and all subsequent modifications, including the permitted exemptions of Annexes III and IV.

Conformity to Directive 2011/65/EU (RoHS II) is intended to the text of the Directive as amended by any applicable later Directive or Commission Delegated Directive associated to it and issued up to the date of this Catalogue (54 documents plus 2 Corrigenda) and to the extent described in the text of this Declaration, including these notes.

Depending on the product, it may make use of exemption 6(b) for lead as an alloying element in aluminium containing up to 0,4% lead by weight (enclosures for multi-pole electrical connectors declared to be made by aluminium die cast alloy, except IP68 series of sizes “44.27” through “104.27” and E-Xtreme® series, which do not use such exemption) or exemption 6(c) for copper alloy containing up to 4% lead by weight (multi-pole connector inserts and removable crimp contacts, except CSH S series, which does not use such exemption as it is not using machined contacts).

NOTE 1 – Expiration of exemption 6(b) has been deferred to 21st July 2021 for our category of products by Commission Delegated Directive (EU) 2018/740; expiration of exemption 6(c) has been deferred to 21st July 2021 for our category of products by Commission Delegated Directive (EU) 2018/741. The above expirations may be subject to further deferment, based on a public enquiry procedure deemed to start on 1st January 2021.
NOTE 2 – Such products by themselves – as components – are not covered by the RoHS 2 Directive; therefore, for such products, there are no direct legal requirements. As no EU Declaration of Conformity can be issued, the above does not constitute a EU Declaration of Conformity to the RoHS 2 2011/65/EU Directive, and the CE marking – which may be applied either on the part or on the packaging label in compliance with other applicable EU Directives, e.g. the Low Voltage Directive 2014/35/EU (a recasting of the previous directive 2006/95/EC in force from 2016-04-20) – is not referred to said RoHS 2 Directive.

The WEEE 2 2012/19/EU Directive (recast) replaced on 2014-02-15 the original WEEE 2002/96/EC Directive (and its later amendments 2003/108/EC and 2008/34/EC). Its last update is Directive 2018/849/EU of 2018-05-30. This Directive aims to recycle and minimise Waste from Electrical and Electronic Equipment (also referred to as WEEE). It encourages recycling, reuse and other forms of recovery of such technological waste and sets ambitious targets for recovery rate, variable depending on the product categories.

In the new Directive, a six-year transitional period was established up to 2018-08-14, during which the equipment included in its “open scope” still remained the same as per the former WEEE Directive. From 15th August 2018, the scope became “open”, subject to the exclusions for various categories of “equipment”, which include the large-scale fixed installations. *These are defined as “a large-size combination of several types of apparatus and, where applicable, other devices, which: (i) are assembled, installed and uninstalled by professionals; (ii) are intended to be used permanently as part of a building or a structure at a pre-defined and dedicated location; and (iii) can only be replaced by the same specifically designed equipment” and large-scale stationary industrial tools defined as “a large size assembly of machines, equipment, and/or components, functioning together for a specific application, permanently installed and uninstalled by professionals at a given place, and used and maintained by professionals in an industrial manufacturing facility or research and development facility”.*

Connectors and their accessories that, as components, are outside the scope of RoHS 2 Directive, do not fall in the scope of WEEE 2 even once “open scope”; moreover, they are primarily used in installations of industrial automation (large-scale stationary industrial tools) which are exempted from conformity to the WEEE 2 Directive.

As required by the WEEE 2 Directive, ILME will take care of any technical and administrative obligation for any ILME product that might be involved.

As a manufacturer of electrical equipment and components for industrial use, ILME acknowledges the regulations introduced by these Directives. The above-mentioned Directives are already effective national law in all EU countries. Similar regional regulations aimed at the preservation of the environment are in force across the world outside Europe.

For the products described in this Catalogue, although the restrictions of use of the above mentioned hazardous substances are not legally applicable, in that no product in this Catalogue belongs to any of the product categories described and illustrated in the above mentioned RoHS 2 and WEEE 2 Directives, the “RoHS conformity” is important, as it is required downstream in the supply chain. ILME has therefore carried out the necessary corrective actions, which have led to the “RoHS conformity” of all products in this Catalogue, wherever required.

ILME products sold after 1st July 2006 do not contain any of the restricted substances in concentrations higher than those allowed by the RoHS 2 Directive and by the subsequent related Decisions taken by the EU Commission.

Fire protection standards for railway applications

The European standard EN 45545 governing fire protection on railway vehicles was published in 2013. In Italy, the various parts are:

- UNI CEI EN 45545-1:2013-05 Railway applications – Fire protection on railway vehicles – Part 1: General;
- UNI CEI EN 45545-2:2013-05 Railway applications – Fire protection on railway vehicles – Part 2: Requirements for fire behaviour of materials and components;
- UNI CEI EN 45545-3:2013-05 Railway applications – Fire protection on railway vehicles – Part 3: Fire resistance requirements for fire barriers;
- UNI CEI EN 45545-4:2013-05 Railway applications – Fire protection on railway vehicles – Part 4: Fire safety requirements for rolling stock design;
- UNI CEI EN 45545-5:2013-05 Railway applications – Fire protection on railway vehicles – Part 5: Fire safety requirements for electrical equipment, including that of trolley buses, track guided buses and magnetic levitation vehicles;
- UNI CEI EN 45545-6:2013-05 Railway applications – Fire protection on railway vehicles – Part 6: Fire control and management systems;
- UNI CEI EN 45545-7:2013-05 Railway applications – Fire protection on railway vehicles – Part 7: Fire safety requirements for flammable liquid and flammable gas installations.

The standard replaces the previous voluntary Technical Specification CEN/TS 45545:2009 and has formalised the withdrawal of all conflicting national standards as of 1st April 2016, the date on which the following parallel standards cease to be effective: in Italy UNI CEI 11170-1:2005, UNI CEI 11170-2:2005 and UNI CEI 11170-3:2005; in France, NF F 16-101:1988 and NF F 16-102:1992; in Germany, DIN 5510-2:2009; in United Kingdom, BS 6853:1999. These, however, remained applicable until 31st march 2016. All certificates covering materials issued in line with national standards remained valid in Europe up until this date. As of 1st April 2016, the only reference standard is EN 45545:2013. However, due to the huge number of customer specifications and technical documents making reference to obsolete standards, the railway business is still moving to a complete unification to the EN 45545 series.

EN 45545-2 specifies the requirements for the fire behaviour of materials and components of railway vehicles according to the different hazard levels defined by EN 45545-1:2013 (HL = Hazard Level). See Table 1 – Classification of hazard levels (EN 45545-2:2013).

Each hazard level provides for its own specific test procedures, test conditions, fire protection requirements and severity (min or max threshold), ranging from R1 to R26. Electrical components of small size and mass, such as electrical connectors, shall have a nominal fire behaviour rating (self-extinguishing) 94V-0 (standard UL 94).

The thermoplastic insulating material used in ILME connectors complies with the requirements of UL 94V-0. There are no requirements applicable to products with a combustible mass < 10 g not in contact with other unclassified products, if they are installed adjacent to components for which no certificates are available. In this case, the requirements depend on the so-called grouping rules.

Connectors are unlisted products in Table 2 of EN 45545-2:2013. As non-listed products, they must satisfy the requirements of Table 3, and as their exposed surface area is ≤ 0,2 m^2, the set of requirements for indoor location in a railway vehicle is R22 while for outdoor location it is R23 (Table 5 of EN 45545-2:2013).

For the materials of connectors, these are the sets of maximum applicable requirements. These sets establish parameters, procedures and limit thresholds (min or max) for the tests. In particular, R22 and R23 specify tests and limit values for oxygen content (oxygen index OI), smoke density (Ds max) and toxicity (conventional toxicity index CIT_{NLP}).

The polycarbonate used by ILME in its connectors meets the limit values specified in EN 45545-2.

See Table 2 – Requirements for unlisted products (including electrical connectors) – at following page.

Until the publication of the previously mentioned series of European standards, the most advanced fire safety standards for the railway industry were French:

- NF F 16-101 Matériel roulant ferroviaire – Comportement au feu–Choix des matériaux;
- NF F 16-102 Matériel roulant ferroviaire – Comportement au feu –Choix des équipements électriques;

which in turn referred to the test methods described in standards:

- NF X 70 100 Analyse de gaz de pyrolyse et de combustion;
- NF X 10 702 Détermination de l'opacité des fumées en atmosphèrenon renouvelée.

Table 1 – Hazard level classification (EN 45545-2:2013)

Operation Category (#)	Design Category			
	A: Vehicles forming part of an automatic train having no emergency trained staff on board	D: Double decked vehicles	S: Sleeping and couchette vehicles	N: All other vehicles (standard vehicles)
OC 1	HL1	HL1	HL2	HL1
OC 2	HL2	HL2	HL2	HL2
OC 3	HL2	HL2	HL3	HL2
OC 4	HL3	HL3	HL3	HL3
(#) Relationship between the service, the infrastructure and the conditions for the evacuation of passengers and staff				

Table 2 – Requirements for unlisted products (including electrical connectors)

Test method	Standard	Parameter	Unit	Interior	Exterior	R22 thresholds (more severe than R23)			ILME (polycarbonate)
Oxygen index OI	EN ISO 4589-2	OI (min)	%	R22	R23	HL1: 28	HL2: 28	HL3: 32	better than R22-HL3
Smoke density	EN ISO 5659-2	D_s max (1)	---	R22	R23	HL1: 600	HL2: 300	HL3: 150	better than R22-HL3
Toxicity of smoke	NF X70-100-1 NF X70-100-2	CIT_{NLP} (max)(2)	---	R22	R23	HL1: 1,2	HL2: 0,9	HL3: 0,75	better than R22-HL3
(1) D_s max = maximum specific optical density of smoke									
(2) CIT_{NLP} (max) = maximum conventional index of toxicity of smoke									

These latter were somewhat similar, in terms of methods, to the American standards:

- ASTM E 662 Standard Test Method for Specific Optical Density of Smoke Generated by Solid Materials;
- ASTM E 162 Standard Test Method for Surface Flammability of Materials Using a Radiant Heat Energy Source.

Test methods referred to in the American reference standard specifying the performance criteria:

- NFPA 130 Standard for Fixed Guideway Transit and Passenger Rail Systems.

Also widely used are the Bombardier Transportation smoke toxicity specifications:

- SMP 800-C Toxic Gas Generation.

In Italy, from 2006 to 31st March 2016, for installation on board railway vehicles, a certificate of conformity to the following Italian railway standards was required:

- UNI CEI 11170-1:2005 Trains and trams – Fire safety guidelines for trains, trams and track guided vehicles – General principles;
- UNI CEI 11170-2:2005 Trains and trams – Fire safety guidelines for trains, trams and track guided vehicles – Design recommendations – Fire containment measures – Indication, monitoring and evacuation systems;
- UNI CEI 11170-3:2005 Trains and trams – Fire safety guidelines for trains, trams and track guided vehicles – Material fire behaviour assessment – Acceptance limits

published jointly by UNI and CEI on 2005-11-30 with parallel validity until 31st March 2016. In these standards, the requirements for materials relating to electrical connectors are contained in the 2nd schedule *"Acceptability criteria for electrical and electronic materials and components"* at the application *"All other applications including flammable materials"* (all applications other than electric cables). For these applications, four material tests are required:

- Exposure to a small flame according to EN ISO 11925-2 with, depending on the level of risk, a resistance to fire of the material of 15 s for LR1 and LR2 and a resistance of 30 s for LR3 and LR4.
- Smokiness in compliance with French standard NF F 16-101 with IF better or equal to F2 for all risk levels. The material we use is classified as F1 (better than F2) according to the tests carried out.
- Smoke optical density measurement, in compliance with French standard NF X 10-702 (from NF F 16-101) with values ≤ 100 for all risk levels LR1…4.
- Toxicity measurement, in compliance with Italian standard CEI 20-37/7, with T ≤ 2 for all risk levels LR1…4.

Tests

EU – The material tested in accordance with the European Norm EN 45545-2:2013 – showed an oxygen index (OI) of 38%, a Ds max (flaming) = 117 and a smoke toxicity index CITNLP = 0,16, compliant with the requirements of EN 45545-2:2013 for all risk levels: HL1 – HL2 – HL3 and, consequently, for all the design categories (A, D, S, N) and operation categories (1, 2, 3, 4) defined in EN 45545-1:2013.

France - The material used in our connectors is certified by an accredited laboratory CERTIFER, according to the previously mentioned French standards NF F 16-101 and NF F 16-102, and has a classification F1 (Index Fumée I.F. = 15) and a smoke toxicity index (Index Toxicité Fumée) I.T.C. = 18.

Both values meet the requirements set out by the French standards and by the Italian standard UNI CEI 11170-3 schedule 2, which relates to electrical connectors.

Germany – The material used in our connectors also complies with the German standard DIN 5510-2:2009 with a flammability class = S4, smoke spreading class = SR2 and drip class = ST2.

UK - The material was also tested according to British Standard BS 6853:1999, with an R (max) index = 0,6, consequently within the limits of Tables 7 and 8 of the standard for vehicle categories Ia, Ib and II.

USA - Tests compliant with American standards have also been carried out at a qualified North American laboratory, confirming compliance with the requirements set out by the US Federal Transit Administration "Recommended Fire Safety Practices for Rail Transit Material Selection" for methods ASTM E 662 (NFPA 258) (specific optical smoke density), ASTM E 162 (ASTM D 3635) (surface flammability → flame propagation index) and Bombardier Transportation SMP 800-C (smoke and gas toxicity).

Standards and Certifications

cULus mark

ILME enclosures have been certified by UL as Recognised Components for the USA and Canada (cUL mark) as accessories of our set of UL and CSA certified connector inserts (file UL E115072, file CSA 082270_0_000).

The certification has been achieved by successfully completing several tests carried out in compliance with standard ANSI/UL 50 (Enclosures for Electrical Equipment) which is equivalent to the North American voluntary standard NEMA 250 (NEMA = National Electrical Manufactures Association) and to the equivalent Canadian standard CSA C22.2 No.94 (Special Purpose Enclosures) for safety levels used in North America and required by the local installation codes (e.g.: NFPA 70 National Electrical Code in the US, CSA system standards for Canada); more specifically:

- Type 12 (= NEMA 12): for internal use, similar to IP54 protection rating according to IEC/EN 60529; it covers Type 1 and Type 2.
- Type 4 (= NEMA 4): for internal and external use, similar to IP66.
- Type 4X (= NEMA 4X): for internal and external use, as Type 4 + corrosion resistance, similar to IP66 protection rating.

The certification includes the enclosure series with ISO, Pg and metric cable entry as well as NPT, all special versions similar to standard types.

Specifications

ISO 23570-3 standard and DESINA® specification compliant

Connectors compliant with DESINA® standard

DESINA® (which stands for DEcentralised and Standardised INstAllation technology) is an innovative installation concept behind a study headed by the German manufacturers of machine tools association (VDW), with the co-operation of users (including German automotive manufacturers) and component manufacturers, which has led to the introduction of a specification aimed to standardise electrical, hydraulic and pneumatic components and their interconnection on common platform for CNC controlled machine tools and manufacturing lines.

In the last few years, the DESINA® specification has been successfully enclosed in the ISO TC 184/SC 1 "Industrial automation systems and integration / Physical device control" as an ISO standard.

This work has been completed, and the following standards have now become available:

ISO 23570-1 Industrial automation systems and integration – Distributed installation in industrial applications: Part 1 – Sensors and actuators.

ISO 23570-2 Industrial automation systems and integration – Distributed installation in industrial applications: Part 2 – Hybrid communication bus.

ISO 23570-3 Industrial automation systems and integration – Distributed installation in industrial applications: Part 3 – Power distribution bus.

EUROMAP (European Plastics and Rubber Machinery)

ILME connectors meet the Technical Recommendations:

- EUROMAP 12: CSAH / CDA / CDC inserts, 32 poles.
- EUROMAP 13: CSAH / CDA / CDC inserts, 16 poles.
- EUROMAP 14 – part 1: CSAH / CDA / CDC inserts, 16 poles (with CDC inserts the iron and constantan thermocouple crimp contacts may also be used).
- EUROMAP 14 – part 2: CSH / CNE / CCE / CSE inserts, 16 poles - CP inserts, 6 poles.
- EUROMAP 16: CD inserts, 8 poles, CSAH / CDA / CDC inserts, 10 poles.
- EUROMAP 27-1: MIXO inserts, CX 08 C and CX 04 B.
- EUROMAP 28: CSH / CSE inserts, 6 poles.
- EUROMAP 29: CSH / CSE inserts, 24 poles.
- EUROMAP 62: CSAH / CDA / CDC inserts, 32 poles.
- EUROMAP 67: CD inserts, 50 poles (CD 25 Z version).
- EUROMAP 67.1: CD inserts, 50 poles (CD 25 Z version).
- EUROMAP 70: MIXO inserts, CX 12 D.
- EUROMAP 71: CD inserts, 50 poles (CD 25 Z version).
- EUROMAP 73: MIXO inserts, CX 12 D.
- EUROMAP 74: MIXO inserts, CX 12 D.
- EUROMAP 78: MIXO inserts, CX 12 D.
