

Model Number

NJ1,5-18GM-N-D

Features

- 1.5 mm flush
- Compression proof up to 350 bar, dy-• namic on active surface
- Usable up to SIL2 acc. to IEC 61508

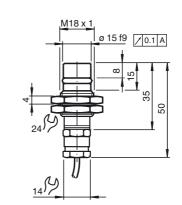

Application

Note

Please refer to the technical information about this product at www.pepperlfuchs.com. This information describes the necessary geometry of the installation space!

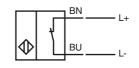

Ι.					
Π	Technical Data				
Ľ	General specifications				
	Switching element function		NAMUR, NC		
Ľ	Rated operating distance	Sn	1.5 mm		
	Installation		flush		
Ľ	Output polarity		DC		
	Assured operating distance	sa	0 1.22 mm		
	Reduction factor r _{AI}		0.4		
	Reduction factor r _{Cu}		0.3		
L	Reduction factor r ₃₀₄		0.85		
	Nominal ratings				
Ľ	Nominal voltage	Uo	8.2 V (R _i approx. 1 kΩ)		
	Switching frequency	f	0 400 Hz		
	Hysteresis	Н	typ. %		
	Current consumption				
	Measuring plate not detected		≥ 3 mA		
	Measuring plate detected		≤ 1 mA		
	Limit data				
	Operating pressure		350 bar (5076.4 psi)		
Ľ	Functional safety related paramet	ers			
	MTTFd		10880 a		
Ľ	Mission Time (T _M)		20 a		
	Diagnostic Coverage (DC)		0 %		
	Ambient conditions				
	Ambient temperature		-25 85 °C (-13 185 °F)		
Ľ	Mechanical specifications				
	Connection type		cable PVC , 2 m		
Ľ	Core cross-section		0.34 mm ²		
	Housing material		Stainless steel 1.4305 / AISI 303		
Ľ	Sensing face		Ceramic		
	Protection degree		IP66 / IP68		
	General information				
	Use in the hazardous area		see instruction manuals		
Ľ	Category		2G; 1D		
	Compliance with standards and d	irectives	S		
	Standard conformity				
	NAMUR		EN 60947-5-6:2000 IEC 60947-5-6:1999		
	Standards		EN 60947-5-2:2007 IEC 60947-5-2:2007

ATEX 2G	
Instruction	Manual electrical apparatus for hazardous areas
Device category 2G	for use in hazardous areas with gas, vapour and mist
EC-Type Examination Certificate	PTB 00 ATEX 2048 X
CE marking	€ € 0102
ATEX marking	😥 II 2G Ex ia IIC T6 Gb
Directive conformity	94/9/EG
Standards	EN 60079-0:2009, EN 60079-11:2007 Ignition protection "Intrinsic safety" Use is restricted to the following stated conditions
Appropriate type	NJ1,5-18GM-N-D
Effective internal capacitance C _i	\leq 50 nF ; a cable length of 10 m is considered.
Effective internal inductance Li	\leq 60 μH ; a cable length of 10 m is considered.
General	The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EC-Type Examination Certificate has to be observed. The special conditions must be adhered to! Directive 94/9/EG and hence also EC-Type Examination Certificates apply in general only to the use of electrical apparatus under atmospheric conditions. The use in ambient temperatures of > 60 °C was tested with regard to hot surfaces by the mentioned certification authority. If the equipment is not used under atmospheric conditions, a reduction of the permis- sible minimum ignition energies may have to be taken into consideration.
Ambient temperature	The temperature ranges, according to temperature class, are given in the EC-Type Examination Certificate.
Installation, Comissioning	Laws and/or regulations and standards governing the use or intended usage goal must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety.
Maintenance	No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.
Specific conditions	
Protection from mechanical danger	When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.
Electrostatic charging	Electrostatic charges must be avoided on the mechanical housing components. Dangerous electrostatic charges on the mechanical housing components can be avoided by incorporating these in the equipotential bonding.

IEC 61241-11:2002: draft; prEN61241-0:2002 type of protection intrinsic safety "iD"

Use is restricted to the following stated conditions

NJ1,5-18GM-N-D..

 \leq 50 nF ; a cable length of 10 m is considered.

 \leq 60 μH ; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual.

The EC-Type Examination Certificate has to be observed.

The special conditions must be adhered to!

The maximum surface temperature of the housing is given in the EC-Type Examination Certificate.

Laws and/or regulations and standards governing the use or intended usage goal must be observed.

The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety. The associated apparatus must satisfy at least the requirements of category ia IIB or

The associated apparatus must satisfy at least the requirements of category ia IIB or iaD. Because of the possibility of the danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation in the power supply and signal circuits is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met.

The intrinsically safe circuit has to be protected against influences due to lightning. When used in the isolating wall between Zone 20 and Zone 21 or Zone 21 und Zone 22 the sensor must not be exposed to any mechanical danger and must be sealed in such a way, that the protective function of the isolating wall is not impaired. The applicable directives and standards must be observed.

If the Ex-relevant identification is exclusively printed on the included adhesive label, this must be applied in the direct vicinity of the sensor! The surface to which the label is to applied must be clean and free from grease! The applied adhesive label must be durable adlegible to protect it against the possibility of chemical corrosion!

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

The connection cables are to be laid in accordance with EN 50281-1-2 and must not normally be subjected to chaffing during use.

Electrostatic charges must be avoided on the mechanical housing components. Dangerous electrostatic charges on the mechanical housing components can be avoided by incorporating these in the equipotential bonding.
